The Luo clan (*dho ot*) has a lineage structure, which means that every member of it can trace his exact genealogical relationship to every other member. Lineages (*dho udi*) are differentiated by adding to the name of a clan or of a larger lineage the copulative *ma* and the name of a smaller branch, as among the Lango, e.g. *Joseje ma Jokayila* are the Jokayila major lineage of the Joseje maximal lineage of the JoAlego clan. Collateral lineages are sometimes said to be *kanyiego*, presumably from *nyieka*, co-wife, to one another.

These larger clans associated with tribal territories are not always exogamous to-day, though they are believed to have been so in past times. It would be confusing to speak of two groups identical in their structural features by different terms because maximal lineages cannot intermarry in one and can intermarry in the other, so I use the word 'clan' for both, having stated a qualification to the accepted use of the term. Marriage is generally forbidden within the clan but it is recognized that the distance between maximal lineages may become so great, both in lineage-distance and through political and social separation, as to allow intermarriage between them. This has happened in the JoAlego clan of Alego where two main lineages, the JoSeje and the KaDenge quarrelled and now intermarry sometimes. On the other hand marriage is not permitted within such big clans as the KaNyikal of Seme, the KaRacuonyo of Karacuonyo, and

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

582 the JoOwila of Uyoma ; and is not approved, though sometimes permitted,
613 even between such fraternal clans as the dominant clans of Karacuonyo,
614 Kisumu, Kadem, Karungu, and Kabwoc. The young men are rebelling against the prohibition. Likewise I was told that though the JokOwila marry into the fraternal clan of Omia (Asembo) it is thought that such marriage may not be very fruitful.

613 Nevertheless in those big clans within which marriage is prohibited
614 or where it is not approved between fraternal clans the custom of *codo* is permitted. *Codo* is a socially recognized love-making in which the youths
836 court the girls and bring them to the *simba* or bachelor's hut and sleep
[833] with them there and have relations with them *intra crura*. Thus the KaAbudha and KoOkelo lineages of the JoOwila clan of Uyoma may *codo* between them, a practice said to date from two generations ago ; likewise the KaGumba and KaDepir lineages of the KaNyikal clan of Seme, though in their case it is said from the last generation only ; likewise the JokOwidi and JokOgol of the KaRacuonyo of Karacuonyo. In these instances were a girl to be made pregnant her lover could not marry her.

613 When two lineages of the same clan are becoming widely separated
614 and are beginning to *codo* between them it is done at first with discre-
836 tion, because the older men are opposed to the innovation, then in open affairs in the bachelors' hut. Finally marriage is envisaged and perhaps
582 eventually permitted, in the first place the less approved form of marriage by abduction (*por*) and then the ordinary form (*meko*). When marriage begins to take place, and even more when it has the approval of the elders, it may be taken to be an indication of political fission, for it was found among the Luo, as among the Nuer, that political values are stated in the language of kinship and that the polito-territorial system is reflected in the lineage system.

582 A man may not marry a *nyakewo*, sister's daughter, in the classificatory
613 sense if her mother was a member of his maximal lineage but he can marry her if her mother belonged to a collateral maximal lineage of his clan,
614 though even then the elders do not always approve. The general principle of exogamy is that a man must not marry any woman whom he regards
184 as a *wat*, a cognatic relative, and Luo reckon kinship as widely as to exclude a man from marrying into his maternal grandmother's clan and his maternal great grandmother's maximal lineage, though it must be said that there is often disagreement, especially between men of different generations about the permissibility of marriage between distantly related persons, that is to say, about borderline cases. In spite of some divergence of opinion however it may be stated that for the Luo, people are either *wat*, kinsfolk, or *wasigu*, enemies. A man cannot marry kin and therefore must marry an 'enemy'. Hence when marriage is allowed between two groups it means that there is no kinship between them or that kinship is no longer recognized between them for purpose of exogamy and this, as said above, is an indication of political opposition, so that one often hears Luo say of a neighbouring tribe, e.g. a Karacuonyo man of the Kocia tribe, 'They are enemies, we marry them'. In other words adjacent tribes are structurally opposed segments in the tribal system

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

while relations of a personal kind and kinship links between individuals run across their common frontiers and are compelled to do so by the exogamous rules obtaining in Luo society.

Several of the clans and maximal lineages possess sacred spears and other objects believed to have belonged to their founders. The best known sacred spear (*tong ma lisua*, spear of sacrifice) is the *tong* Alego, the spear of Alego, the founder of the JoAlego clan. In Ugenya the JokaGer clan have several such spears and there are others in possession of the lineages descended from Cuanya to the south of the gulf. Where there are important stranger lineages in a tribe they may also have their sacred objects, e.g. in Alego the KaLuo and the JokOgelo have sacred spears and the JoAgoro have a sacred stone and a sacred pot handed down from their founders. These objects are symbols of the unity of a clan or lineage and, by extension, of the tribe or tribal segment in which it is dominant, and they were used ritually in time of war or of common calamity, such as drought and invasion by locusts. They seem generally, if not always to be held by the senior line (*dho ot ma duong*) of a lineage or clan and are kept either in a granary or in hiding in the bush. The senior line is often called on by junior collateral lines to perform important sacrifices for them and the senior lineage ought to provide the sacrificial beast at ceremonies common to all the lineages. I was told also that while each lineage had its *won gweng*, 'father of the land' the *won gweng* of the senior lineage had chief prestige among them.

Some clans and lineages have certain ritual prohibitions (*kwer*), mostly on certain foods, particularly kidneys and liver. The Luo do not give the impression of attaching much importance to them and if a man and a woman observe the same taboo it is not in itself a bar to marriage. Reference must also be made to clan and lineage honorific, or praise, names. The *nying paak* is generally derived from the name of a paternal ancestor whose name is a lineage cognomen, e.g. Okwiri (see the chart of the JoOwila clan) can be called, according to the circumstances, *wud* (son of) KoOkelo, *wud* KaJeje, and *wud* Owila. These names are much used at communal gatherings, expecially at large beer parties.

A feature of clanship which would seem to be of some importance is the annual inter-lineage wrestling. Unfortunately, I only became aware of these shortly before I left Luoland and had afterwards no further opportunity to enquire further into the custom, or to discover whether it is practised all over Luoland or only in some tribal areas, such as U-yoma where the closely related collateral lineages wrestle for practice prior to the wrestling matches between the big lineages. Thus the Ko-Okwiri are matched against the KoObong, then these two lineages together against the KaAtuenga and KaAbudha, and so on. The lineages send a messenger to challenge the other party and when they meet an elder presides over the joint bouts and the exhibition matches between famous wrestlers on each side. The matches are said to occasion much excitement among the spectators.

The sketch given above of the Luo clan is only an outline delineating feature of it. A little detail is filled in here and there in the following

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

613 section where are recorded some notes about the JoAlego clan of Alego
614 tribe, the JoOwila clan of Uyoma tribe, the KaNyikal clan of Seme tribe, and the KaRacuonyo clan of Karacuonyo tribe. It must be borne in mind in reference to these examples, as in regard to the rules of exogamy noted earlier, that these clans are associated with tribal territories and that there are many small lineages, many of them of Bantu origin, which have not the same spread in genealogical or physical space and have not the same depth in lineage structure; also, that all the main clans ultimately trace their descent from the same mythological names of Podho and Ramogi so that it would be possible to place them all on a single chart of descent. Since the smaller stranger lineages have points of graft on the trees of the dominant clans it might be possible to place the whole Luo people on a single chart. The clans, as I have described them, are, however, the largest descent groups which have eponymous ancestors, who are considered by the Luo to be the points at which an exact record of ascent passes into a hazy plane of tradition where a single line of mythological ancestors is finally lost in the beginnings of the world. They are the points at which genealogical structure begins.

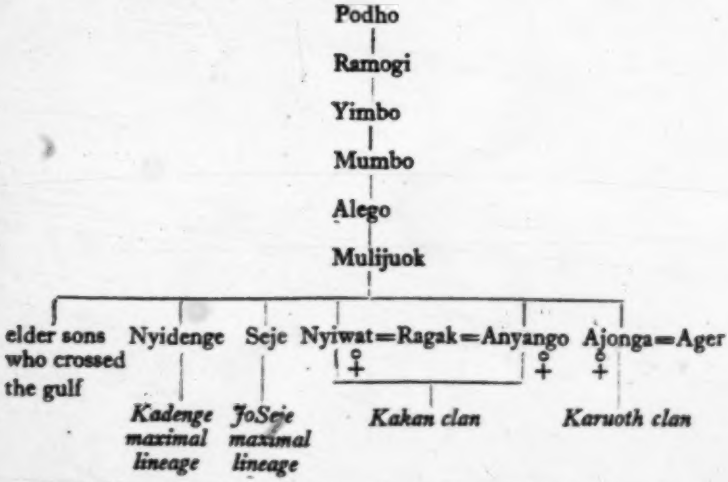
5

173 In the Alego tribe the dominant clans are the JoAlego with its maximal
613 lineages, the JoSega and the KaDenge. There are a number of other
614 clans and large lineages living in the tribal territory, apart from small stranger groups and individuals. The two most powerful of these stranger clans are the Karuoth and Kakan (JokAnyango). Other clans or lineages of some importance are the KaLuo, JoMar, JoAgoro, JokOgelo, KaNyinek, KaRapol (JoKato), JoUmala, KaLikada, and JoUyawa. The presence of these clans and lineages in Alego and their intra-tribal relations with the JoAlego are accounted for in a number of traditions or myths. These myths relate that when Alego entered the country from the west (Yimbo or Kadimo) he found there a people called Kombekombe and they and Alego's people live together in peace. Then the Kombekombe people began to disperse and were lost and the whole of the land came into possession of Alego and his sons. Then came other clans after Alego into the country but Alego fought them and compelled them to settle elsewhere. Then the elder sons of Mulijuok crossed the gulf and settled in what is now called South Kavirondo and Mulijuok was left with his younger children, Seje, Nyidenge, and three daughters, Nyiwat, Anyango, and Ajonga.

Other clans now entered the country with the permission of the Alego folk (the story is told by them). Came Ragak and married Nyiwat and Anyango and begat the clan of the Kakan, who count as *orche*, in-laws, to the JoAlego. Then came Ager (from Kadhola or Budama) and asked Mulijuok for permission to settle on the land and Mulijuok agreed that he and his people might live on hill Akara. When Mulijuok died Ager plotted to kill his sons Seje and Nyidenge to wrest the soil from them. Seje heard of this plot and summoned Nyinek, Uyawa, Agoro, Ragak, and others (the lineages are personified in the story) to make war against

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

the people of Ager, whom they defeated. Ager later asked for the hand of Ajonga by whom he begat the Karuoth clan, who also stand to the Alego folk as relatives-in-law. The genealogy given below illustrates the story. From Mulijuok to the present day there are nine to ten generations. Other stories, which I do not recount here, explain the relations between the Kakan and the JoUyawa and other clans in Alego tribal territory. In these myths the tribal structure is presented in terms of lineages and the lineages are personified.



The JoAlego genealogy has been presented in its simplest form, pruned of all subsidiary branches. The JoOwila clan is shown in slightly fuller form to illustrate better the lineage structure of a typical Luo clan. The JoOwila are the dominant clan in Uyoma (pop. 11,694, density 91·3). Owila, the ancestor of the clan, came from Alego and brought with him the various clans now living in Uyoma together with the people who now occupy Asembo (where the dominant clan are the Kale) to which country the Uyoma people drove them after a quarrel. Though there are many stranger lineages living in Uyoma its population is probably less mixed than is the case in most tribal areas.

The JoOwila clan divides into four main branches or maximal lineages, as shown in the chart below, the JokOkelo or JokObong being the senior line. These four lineages do not intermarry. Each owns a distinct part of the tribal territory though the members of one lineage are frequently found living in the territory of another. The KaAtuenga and KaAbudha, having the same ancestress regard themselves as a single segment in relation to KoOkelo and KoOkwiri. Genealogical links through females with stranger lineages living with the clan are not shown on the chart.

The relativity of lineage values, to which I have given some attention in my book on the Nuer, may here be touched on, using the JoOwila

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

613 614

clan as an illustration. Lineage names are in italics. Only one line is shown to its full depth. When Okwiri is asked what is his lineage in his tribal area he will probably say: '*dho odwa KoOtual*', 'my lineage are the Ko-Otual'. If further asked: 'Which branch of the Ko-Otual?' ('*Ko-Otual ma dho ot mani*') he would reply: '*KoOtual ma KaJeje*' and in situations in which Kajeje stand opposed to JokOrua he would probably give KaJeje as his lineage in the first instance. When speaking of the Jok-Akech or any other medial lineage he would call himself a KoOtual man. In speaking of the KaAbudha or another of the maximal lineages he would call himself a member of the KoOkelo lineage. This feature of the lineage systems is too well known to be elaborated further.

FL11 Luo FL11

173
613
614

In Seme (pop. 29,919, density 311·6) the dominant clan is the Ka-Nyikal, the main divisions of which are the Kade[illegible] and the KaGumba, Gumba being a foundling adopted and brou[illegible] by Nyikal. I omit a genealogy of this clan for reasons of sp[illegible] would draw passing attention to the common feature of li[illegible]tems by which stranger lineages are grafted into the structu[illegible] dominant clan of the tribe by mythological fictions. The Ka[illegible] to whom I have just alluded, is a very powerful lineage. Another strong lineage in Seme are the KaYila. According to the myth Yila was an Alego man who took to the bachelors' hut Amolo daughter of Nyikal and made her pregnant. He then fled the country. Amolo was an Amazon with a will of her own and she later went to fetch her lover and brought him back to Seme with his sons from whom are descended lineages, by a wife whom he had married in his exile. Another big clan in Seme are the Kolunje. Nyikal had a servant called Anam who used to take his sons to the edge of the lake to collect fodder for the calves. One day they found there a man called Onyango. Nyikal adopted this stranger together with Anam, and Kolunje is the joint name for their descendants, the KaAnam and the KoOnyango.

The last clan of the structure of which I shall give an outline are the KaRacuonyo. Jok, who appears to be the same as the Mulijuok of the Alego myth, begat two sons. One of them, Cuanya, is the ancestor of the principal lineages in the tribal areas of Kisumu, Kanyamwa, Kabwoc, Karungu, and Kadem. The other is the ancestor of the KaRacuonyo clan, who are dominant in the locations of Karacuonyo (Kaduong), Mumbo and Kabondo. According to the Alego myth there were two other brothers, Seje and Nyidenge, as has been noted, but these are not given in their genealogies by the people to the south of the gulf. According to some the ancestor of the now Bantuized Wanjare was another of Jok's sons.

The story current to the south of the gulf is that Jok was accidentally killed by his sons in an elephant hunt. A certain man called Cien took Racuonyo and made him his servant and after various adventures together adopted him as his son. When Cien died Racuonyo took one of his wives, Omiri, and by her begat Sepol, who is the ancestor of the dominant lineages in the Kabondo and Mumbo tribal divisions, the Joko-Owidi and the JokOmala. According to Luo custom Sepol was a son of the dead Cien and not of Racuonyo but the sons of Cien said they did not wish him to be known by the name of their father, so he was called after Racuonyo. The descendants of Cien by a different wife claim to be the owners of the Mumbo lands, but they are now a very small people, due it is said to their having insulted their father who haunted them after his death. The descendants of Racuonyo are shown in the chart below. Only the principal lineages are given, except in the line of descent to one man for illustration.

The man Rapemo can, according to the context, describe his lineage as KaMuma, JokOnyango, KaNdaya, KoOkoth, JokOwidi, KaSepol, and KaRacuonyo.

Each of the big lineages of the KaRacuonyo clan owns its own part of the tribal territory and within a section owned by a large lineage the

FL11 Luo FL11

613 parts owned by its branches are fairly distinct. Intermarriage is the main
614 cause of intersettlement and marriage within this clan is not permitted.
There are a number of stranger lineages in Karacuonyo (Wagwe, Kamwala, Kakmuno, Jokadero, etc.) but they are small lineages and so much intermarried with the dominant KaRacuonyo clan that they have no territorial and political distinctness. Some attention must now be given to the status of stranger lineages to the dominant lineage within a tribe.

We have noted that in Karacuonyo there are few stranger lineages and that they are weak ones. By far the greater majority of the tribe are members of the dominant clan. Other tribal territories display greater clan admixture and the presence of powerful stranger lineages whose numerical importance is reflected in the tribal myths. A European may not quickly become aware of these stranger elements unless land disputes force his attention to them, for the dominant clan is generally identified linguistically with the tribe. JoAlego means both the tribesman of Alego tribal territory and the patrilineal descendants of Alego and KaRacuonyo means both the tribesmen of Karacuonyo tribal territory and the patrilineal descendants of Racuonyo. Therefore if a man of the JoMur stranger lineage in Alego were asked outside Alego to what people he belongs he would reply that he belonged to the Alego folk, but if he were asked within the tribal territory he would say that he was a JoMur, for the JoMur
186 are a distinct agnatic group living in their own portion of country within
613 Alego.
Now, from the point of view of the dominant clan in a tribal area the
614 members of this clan alone are the *jopiny* or *jogueng*, the people of the
609 land and the owners of it, and the rest are *jodak*, the separated people, the strangers: though if they lived among them a long time they speak of them as *jobedo*, for *jodak* is a harsh word.

These stranger lineages are grafted into the lineage structure of the
613 dominant clan so that through recognition of female links the whole tribe
609 may be regarded as a system of cognatic lineages. Luo speak of the affi-
614 liated lineages as *kawce*, lineages of in-laws, or as *kaner*, lineages of maternal uncles, since it is from them that they take their wives and the mothers of their children. As the affiliated lineages have taken wives from the dominant clan they also come into the category of *okewa*, sister's son, to its members. In this way every lineage in a tribe, whether of the dominant clan or of stranger stock, has a structural position in the system of lineages of which a tribe is composed and of which the lineages of the dominant clan are the framework.

578 The lineages of the clan which owns the tribal territory and those
613 affiliated to it seem in the past to have been on a general social equality
614 and to have acted corporately in matters of common tribal interest, particularly in war against other tribes. They were differentiated only in matters of ritual, marriage regulations, and, as explained earlier, in settlement of homicide. In recent years, however, acute differences have arisen about land in those parts of the country where the density of population is greatest, especially in the most northern tribes of Central

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

Kavirondo, between the different lineages, sometimes betwen a lineage of the dominant clan and sometimes between two stranger lineages.

In the past there seems to have been no serious difficulty about land; there was plenty of it and more could be acquired by war and migration. People were glad, I was told, to welcome strangers who added to the fighting strength of their community and who provided them with wives for their sons. The strangers settled as *owze*, in-laws, and become maternal uncles and sisters' sons. Personal relations between the members of the lineage of the dominant clan and the strangers who settled among them and intermarried with them were all of a kinship order. But these relationships of a kinship kind are structural points at which affiliated lineages are grafted on to the tree of descent of the dominant clan. Personal relations give place to structural relations. People do not readily quarrel with their own parents-in-law or maternal uncles or sisters' sons about land, but when the pressure of population becomes acute they may dispute with those who count as lineage in-laws, lineage maternal uncles, or lineage sisters' sons, that is to say when the relationship has become a structural one and ceased to be one of an intimate kinship kind, for intermarriage and thereby the formation of new kinship links between a lineage and another living on its land must for reasons of exogamy become less and less. There is a bit difference between a member of the JoSeje lineage of Alego and a man of a stranger lineage whom he calls sister's son in a personal sense and a man whom he calls sister's son in a structural sense.

[178] Hence we find to-day in the overcrowded tribal areas considerable inter-lineage enmity about land. If it is not a new feature of Luo life it has certainly been accentuated by European rule and restrictions. Tribal cohesion has suffered from peace and land hunger has increased disharmony.

The *jopiey* claim the land in virtue of their ownership of the tribal territory and point to their *gundini*, their ancient homestead sites, which are remembered for many generations, and to the graves of their ancestors in the disputed area. But stranger lineages which have grown numerous and powerful may also claim to be *jopiey* in the same area in that they have resided there for many generations and also can point there to their ancestral homestead sites and the graves of their forebears. Sometimes a second stranger lineage have grown strong at the expense of a first and pushed them off their lands, so that three lineages can lay claim to the district. Problems of this kind were arousing much feeling in Alego during my visit, for there land is becoming scarce. They may be further complicated by the fact that the present dominant clan has in the past ousted a clan once dominant in the territory and who also have in the land their homestead sites and graves, for it is held by all Luo that title deeds to lands are ancient homestead sites and ancestral graves and that a man has a right to ask for land to cultivate in the district where his ancestors lived and are buried. This does not mean that a man can come back from the tribal area in which his family have lived for several generations to that in which his earlier forebears lived and claim the land

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

on which a *gunde*, homestead site, of one of them is situated; but it means that he has a right to cultivate somewhere in that district. There is in this way an overlapping of rights in a territory.

Among the Luo ownership of agricultural land is vested in the lineage and every member of a lineage which owns an area has the right to cultivate in it. The individual has only rights of use, which are hereditary so long as the land is maintained in use; but a man cannot sell the land, for his whole lineage and maybe other lineages as well have rights in it; nor can he reclaim it if he has left it for some years and it is being cultivated by another man. Grazing land (*puot*) is always common. An individual can share his agricultural land with kinsmen, such as a daughter's husband or sister's son, and stranger lineages take root in the soil in the first instance through a personal tie of this kind. Sometimes a lineage of strangers flourish at the expense of the lineage whose forebears first gave permission to their ancestors to cultivate the soil and they begin to get a grip on the land and to count their graves and homestead sites in it. Or the lineage which owns the land increases and wants more land for its own members but finds that the land it wants is under cultivation by the descendants of strangers who now regard it as theirs by right and they begin to contest their occupation of it. They cannot directly challenge their use of the land nor just oust them from possession while they are using it, but they encroach on their cultivations and by constant pressure try to squeeze them out. The strangers have redress before European constituted courts but if they are weak they do not care to resort to them because they know that even if they win the case they must continue to live among their more powerful neighbours against whom they have proceeded. For such situations one cannot find rulings in past custom and when disputes of this kind occur to-day settlement depends on a variety of factors, the strength of the stranger lineages, their wealth, their influence with the chiefs and their ability to bribe them, and so forth.

7

This paper is sketchy and the survey on which it is based was superficial. Those investigating the Luo at the present time will doubtless give a fuller, more accurate, and more balanced, account of their social organization. Nevertheless, the enquiry has served its limited purpose in that it has shown that Luo political structure with its lineage framework is in essential characteristics like that I have recorded for the Nuer. There are some differences, which I hope to discuss soon in a comparative study of Nilotic lineages as a contribution towards that study of lineage systems on a broader African and world-wide basis which research is slowly making possible. However, it may not prove easy to determine whether the differences are significant till an intensive study of the Luo has been made. All this paper claims to do is to show that the Luo have the same type of structure as the Nuer. Recent research has demonstrated that both Anuak and Shilluk have a lineage structure though it is

HOMICIDE AND SUICIDE AMONG THE JOLUO OF KENYA

G. M. WILSON

101 The Luo ("Jaluo," singular; "Joluo," plural) are unique in that they are the only Nilotic speaking people in Kenya. Their place of origin is the Nile Valley; through the centuries by gradual expansion by war and peaceful penetration, they migrated up the Nile Valley, through Uganda, into Kenya, along the shores of Lake Victoria. The term Luo means "swamp" and Joluo "the people of the swamp." Through their migrations they have left behind other Nilotic groups in Uganda and in the Sudan.

131 The Joluo are chiefly concentrated in Central Nyanza where over half a million of them are found today. There are, however, Luo pockets in North Nyanza and also in South Nyanza.

631 The Luo of Central Nyanza are divided into twelve tribal groups. Each tribal group, with a Government-appointed chief, today forms an administrative unit, a "Location," within the District of Central Nyanza. These administrative units, laid down in the early twenties, coincide fairly accurately with the former tribal boundaries and are accepted by the people.

● 614 Each Luo tribe can be described as a society of agnatic parallel lineages or clans, each tracing either real or mythical descent from a common eponym or descent through an adopted or affiliated family to the eponym.

614 198 [197] The original form of the clan and lineage structure remains today in comparative purity. The Joluo people—although on the surface they have accepted Christianity—still retain the ceremonial, religious, and ritual aspects of their culture to a very large degree.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

614 very large degree. Their family system remains strong and
178 largely unimpaired by the impact of Western civilization. The patriarch of the extended family unit, the *jokakwaro*, remains the local authority. Because a series of family groups together form a territorial unit, the sub-clan, the strength and solidity of the Luo family and lineage structure remain supreme. Obviously there have been changes. Basically, however, the changes are superficial.

562 The role of women in Luo society is a subordinate one. Indigenously they play no part in the major ceremonies or rituals and have never had political authority. They do not organize in age groups or societies as in other cultures, and remain primarily the property of their father and his lineage or, on marriage, the property of their husband and his clan.

595 Polygyny is still the ideal and goal of the majority of Luo men. A recent village survey showed that taking a sample of 744 homesteads, which varied between a simple monogamous family and the very large unit of the extended polygamous family, 55 per cent were monogamous units, of which 9 per cent had a leviratic wife or wives, thus making them socially polygamous units; 45 per cent were polygamous homesteads, of which 11 per cent had a leviratic wife or wives. Only 27 per cent of the total sample were found to be simple monogamous households, that is one in four of the family type associated with Western culture: a man, his wife and children. The remainder were either polygamous or had leviratic wives or were of the extended family type. Of this 27 per cent, moreover, it was the ideal of the vast majority to become polygamous later.

871 Education among the Joluo has increased rapidly in recent years, and it was found in our sample that 63 per cent of the boys of school age were either at school or had been to school for more than one year. The figure was 30 per cent for the girls. Of the adult males, however, only 26 per cent had been to school, and of the married females, only 7 per cent. The standard attained, moreover, was not high. More than half the male

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

der the head of manslaughter should be punished at all. They feel that a person who makes the mistake of killing in anger is or has been or will eventually be punished by the ancestors, God, the elements, by illness, bad luck, misfortune, or the like, in the inevitable nature of things.

It is believed that cold-blooded, premeditated murder brings *chira* to the group and is therefore punished by the tribe or by the segment affected. The group or the individual who took what they regarded as this calculated risk was eventually banished from the tribe or if large and strong enough to dominate the political unit to which the deceased belonged could force his supporters, usually his segment of the clan, to break away and leave the area. Luo kinship describes all members of the clan in the same genealogical generation as brothers; fratricide, therefore, has a very wide range.

Luo clans occupy and are identified with a geographical area. The clan and the area it occupies are usually called after the eponym of the tribe. Those living within a clan or tribal area who are not members of the clan or tribe are regarded as squatters (*jodak*) with limited rights. They may be unrelated squatters, but most often are found to be affines of legitimate clan members. Murder committed by such persons invokes immediate counteraction on the part of those who belong to the land by virtue of descent, *jogweng*. Cattle could be taken by force, the culprit banished or killed, and/or a woman from that group married by a member of the dead man's minimal lineage, his *jokakwaro*, to raise seed unto the dead man's name. This woman would be regarded as the wife of the dead man, her children would placate his ghost as father (*wuoro*), the physical father would merely serve as genitor.

One major clan, *Kakia*, of a powerful tribe, the Seme of Central Nyanza, descended from a woman of this type—but then not exactly of this type: what happened was as follows. A *jadak*, living in the clan area of Seme, killed the son of an important elder of the tribe. He fled to his own tribal land to

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

avoid the immediate consequences and as a result war broke out between the people of Seme and the people of his tribe, Ugenya. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It *is*, to my knowledge, the only clan in Luo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Joluo attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Joluo had developed several devices to deal with the problem of homicide. A wife could be married in the name of the dead youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was dedowered by a stranger (*jakawuny*)

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

constant activity in the field and home. The freedom with which the young women mingle with the men is striking, they may be seen among them, leaning on their shoulders when standing, as unrestrainedly as the men with men. The absence of clothing in no wise embarrasses them nor does it cause either sex a moment's thought; they are accustomed to this state of nature from childhood and feel no constraint in mingling freely together. They are extremely fond of ornaments and of painting themselves with different coloured clays, and often make patterns upon their bodies which they retain until the clay wears off. Their hair is often allowed to grow long, and youths frequently increase the length of it by twisting cords into it, greasing the whole with castor or other vegetable oil and rubbing red clay into it. Men and women mix freely together and often work in parties on the same field, singing songs as they work and keeping time with their hoes as they dig. Their homes in the hills are exposed and cold. Still, they do not appear to feel the cold winds and move about and work as freely as well-clothed tribes. As a tribe they combine agriculture with pastoral pursuits and their diet consists of milk and vegetables.

Origin of the tribe. According to their traditions they come from the north-west. Their ancestor Ramogi, they say, had seven sons named Kwenda, Nyakal, Owede, Nyadwat, Sakwa, Alego and Langho; and he adopted another son, Ugenya. Langho, they say, is the father of the Masai and Setik tribes. They trace their own descent from Owede who had two sons, Omwa and Sagam. We then have two groups forming the tribe, as follows: Omwa, whose descendants formed eight clans; Sagam, whose descendants form seven.

The descendants of Omwa:

1. Dongo	2. Nyuto	3. Orando
4. Kwamuli	5. Nyamwogi	6. Ndalo
7. Ogenyo	8. Nyakwal	

The descendants of Sagam:

1. Pwonja	2. Hadodi	3. Waranja
4. Raieng	5. Wango	6. Menya
7. Nyamoda		

/hformation on Luo "clan" will be found in category 614./

economic activities and although, formerly, there were organised hunts, today hunting is not much practised. 105

LUO EXPANSION

Until the time of European intervention the Luo appear to have been gradually expanding towards the south. This resulted in their division into two parts (on the north and south of the Kavirondo Gulf) namely: the Luo of Central Kavirondo and the Luo of Southern Kavirondo. Evans-Pritchard writes, "The southwards migration seems to have been across the Gulf from Uyoma and Asembo to Karecoonyo, and not round it, and to have taken place over several generations, commencing, if genealogies are to be trusted, about seven generations ago. Across the Gulf the Luo came up against the Bantu (Ikwa) and Nilo-Hamitic (Lango) tribes."(1) The assimilation and absorption of these tribes was incomplete at the time of European occupation of the country. During this process of expansion there was a considerable dispersal of lineages so that lineages of the same clan are found in both Central and South Kavirondo. The Luo tribes least influenced by the Bantu are the Uyoma, Same and Asembo and such tribes as pushed the southernmost Luo into Bantu country. 174

SOCIAL ORGANISATION AND POLITICAL STRUCTURE

At the present time Luoland is divided into a number of administrative locations which vary considerably in area and population. These locations, according to Evans-Pritchard, correspond approximately to the old tribal areas of the Luo. The expansion of the Luo has divided them into two main groups with Kisumu location forming a narrow territorial link between them: 631 101

1. The Luo of Central Kavirondo, known as *Joiye* (the inside people).

2. The Luo of Southern Kavirondo, known as *Jooko* (the outside people).(2)

THE TRIBE (*Piny*)

Among the Luo the tribe is an autonomous political unit. Like the Nuer tribes it may be defined in terms of the way in which homicide was formerly regarded and treated. 619 682

Compensation for homicide (*cut*) takes the form of handing over cattle, or a girl, to the kinsmen of a slain man so that heirs may be raised for him. Compensation is only paid for the killing of a tribesman, for men of other tribes, slain in war, raids or private conflict, are regarded as enemies, enemies. On the other hand, compensation is not paid for killing a clansman, for such a deed is regarded as a sin, and propitiation and atonement have to be made by the sacrifice of an ox provided by the mur-

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1940, No. VII, p.2.
(2) Ibid.

619 682 diate kin of the slayer, and eaten by representatives of the entire clan. It might, however, be insisted on that the slayer should marry a wife in the name of the dead clansman and raise heirs to him. Strangers having close kinship links with a dominant clan, may refuse to pay compensation, and they tend to regard killing as a sin, since the acceptance of compensation for homicide emphasized a distinction they are anxious to obliterate.(1) A Luo tribe can be defined as a unit in which compensation for homicide is paid, or in which there is provision for payment and the settlement of the feud.

The Tero Buru

619 766 Luo tribes were formerly separated from each other by the thin - a stretch of bush country left unoccupied. Between segments of the same tribe there was no thin. The ritual demonstration of *tero buru* took place across these boundaries. It was the custom of the Luo in the past not to bury an important man, known for his wealth or for his military ability, until the whole tribe, or a large part of it, had crossed the thin and demonstrated in front of the homesteads of the neighbouring tribe. The demonstration took the form of insults, challenges to fight and the tempting parade of cattle. It was a matter of honour for the challenging party to stand their ground and defend their herds with their lives. Such demonstrations were also made against neighbouring Bantu who had a similar structure to that of the Luo tribes. The demonstrating party was not usually attacked unless two *buru* parties of opposing tribes met. Sometimes, however, the opportunity was taken to try and raid the cattle of the neighbouring tribe.

649 Payment of compensation and the *tero buru* are the two main indications of tribal separation. In addition there is the association of a specific lineage unit with a tribe.

CLANS AND LINEAGES

613 614 Each Luo tribe has a dominant clan or lineage. The clan *(dho-ot)*, has a lineage structure and lineages are differentiated by adding to the name of the clan or larger lineage an and the individual name of the smaller branch. Formerly, the clans were exogamous but today the larger clans are not always so. Within the large clans agnatic lineages can intermarry when the distance between them has become great enough.

936 Where the separation between two lineages has not proceeded far enough or where two clans are closely related there is a socially recognized form of love-making called *ondo*, which takes place between the young men and girls of both groups. Marriage is not permitted until the separation has proceeded further. After some generations the less approved type of marriage *(pur)* may be permitted. This is marriage by abduction and it is eventually replaced by the ordinary form *(nono)* when the complete separation and distinctiveness of the units is recognised.(2)

582 583

582. A man is forbidden to marry a woman who is a sor, a cognatic relative.

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1940, No.VII, p.6.
(2) *Ibid.*, p.7.

Among the Luo a man is excluded from marrying into clans as distant as that of his maternal grandmother or into the maximal lineage of his maternal great-grandmother. Thus a Luo man may not marry his kin, but only wasigu (enemies) with whom no kinship is recognised. It is, therefore, difficult for a man to marry into a clan or lineage within his own tribe. The system of exogamy consists in the structural differentiation of a tribe but also it creates relations of a personal and kinship nature between individuals of two different tribes. 582

The relationship between kinship and territorial units seems to follow closely the pattern found in other Nilotic tribal groups. In the Alego tribe, for example, we are told that there is a dominant clan, the Jo Alego, and its maximal lineages, the Jo Sege and the Ka Dengo. There are a number of other clans and large lineages living in the tribal territory as well as small stranger groups and individuals. The presence of these clans and lineages in Alego, and their relations with the Jo Alego, are accounted for by traditions or myths in which stranger lineages and the lineages in possession (which are personified) intermarry, and the stranger lineages assume the position of in-laws. Other tribal areas have a similar structure. Evans-Pritchard states that the relative values of lineages are the same as with the Nuer. In opposition to other maximal lineages a man will give the name of his own maximal lineage but when speaking of an opposed smaller lineage he will give his own immediate lineage, the particular branch of the maximal lineage to which it belongs.(1) 613 614

The Dominant Clan

The dominant clan is usually identified linguistically with the tribe. Thus, Alego means both the tribesmen of Alego tribal territory and the patrilineal descendants of Alego. Members of the dominant clan alone are *jopiny* or *jopiny* - the people of the land and the owners of it. The rest are *josiki* - the separated people, the strangers. Stranger lineages are grafted into the lineage structure of the dominant clan so that, through recognition of female links, the whole tribe may be regarded as a system of exogamic lineages. The Luo refer to the affiliated stranger lineages as *kwaro* - lineages of in-laws, or *kwar* - lineages of maternal uncles, since it is from them that they take their wives and the mothers of their children.(2) 619 614 613

For general purposes the *jopiny* and *josiki* are on equal terms and co-operate in matters of common interest. The differentiation only appears in matters of ritual, in marriage regulations and when homicide occurs. In recent times the differentiation has become plainer through land disputes. Formerly there was enough land for everyone and more could be obtained by war and migration. Now, there is considerable inter-lineage enmity about land. The *jopiny* claim the land in virtue of their ownership of the tribal territory and as proof of this they point to the ancestral graves. Stranger lineages which are numerous and powerful may also claim to be *jopiny* in the same area and, having dwelt there for some generations, can also point to their ancestral graves. It is the general rule that a lineage has the right to cultivate land where its forebears have lived for several genera- 614 613 578

(2) *Ibid.*, p.10.

614
613
578

tions. Sometimes several lineages can claim this right, and the structural differentiation and the type of connecting link between them is revealed in the resulting disputes.

IMPORTANT MEN AMONG THE LUO

554

There is no real political office in the Luo tribes, but there are a number of people who are of notable status.

The Ruoth

The *ruoth* is simply an influential man. He is richer in wives and cattle than most people, and he may help a poor man to marry by giving him a cow. Any man may become a *ruoth*, although he is usually a member of the dominant clan of the tribe. No such political or ritual significance are attached to the Luo *ruoth* as are associated with the Lango and Acholi *rwodi*.(1)

Thumbi

The *thumbi* are warriors of reputation. They lead all the raids against the tribal enemies. Their position depends entirely on individual ability in war, and therefore they are not necessarily succeeded by their sons.

The Nun Gweng

The *nun gweng* is the father of the land and a man of influence in every district. He is a senior member of a lineage of the dominant clan of the tribe, and settles land disputes within the tribe. He also sacrifices to the sacred spear of the clan, and points it towards the enemy before a tribal war begins.(2)

RITUAL EXPERTS

554
791

The *jabilo* is the most important of the ritual experts and the chief tribal figure. There may be more than one *jabilo* in each tribal segment, but usually one is more influential than the rest. The *jabilo* inherits his position from his father. His functions include divination of the fortunes of war, *cursing the enemy and making magic to ensure victory*. Although he does not accompany the warriors, the *jabilo* receives part of the spoil in return for his services and is, therefore, usually a *ruoth* - a rich man. A further investigation of the *jabilo*'s place in society would be particularly interesting. It is said that he was also a peacemaker and could intervene in a fight by dragging his leopard-skin along the ground between the two opposing sides.(3) The *jabilo* sometimes exercises the functions of rain-maker (*jabuth or nun kuth*).

● 614
791

Luo tribal structure appears to be, in all essentials, similar to that of the Nuer, the typical segmentary lineage structure, associated

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1948, No. VII, p.5.
(2) *Ibid.*, pp.5-6.
(3) *Ibid.*, p.6.
cf. Nuer leopard-skin chief

with territorial unit, is not organised round a symbolic office such as the Shilluk *reth*ship, the Anuak nobility or the Acholi chiefship. The interaction of the segmentary system is the basis of organisation and co-operation. The Lango organisation closely approaches that of the Luo but, until further information is forthcoming as to the exact position of the Lango *rwot* and the political importance of the lineage system, the degree of similarity is difficult to determine. On the basis of present knowledge it would seem that the Lango, with their hierarchy of village headman, *jago* and *rwoth* are more highly organised than the acephalous Luo, with their ritual experts, elders and lineage heads.

619 171

THE LUO HOMESTEAD

The homestead, the residence of an elementary, or sometimes a joint, family, is generally called a *dala* (Bantu) *or pacho* (Nilotic). It is surrounded with a thick hedge of euphorbia, in which is a narrow gap forming the entrance to the kraal round which are grouped the huts and granaries. 592

According to Evans-Pritchard, there is no real village group. The head of the homestead is the head of the family occupying it. Each married man has his own hut, with huts for his wives on either side. Unmarried women live in a hut looked after by an old woman, and single men occupy a bachelors' hut near the gate in order to guard against cattle thieves. Sons often go and found their own homesteads if they wish to be independent. The eldest son eventually builds his wife a hut of her own outside his father's homestead and the younger brothers will later do the same. The large polygynous family thus splits up gradually as the sons extend their own family units and form separate homesteads. This process is completed with the death of the original man *dala* and the inheritance of the widows. The first wife is the chief wife of the homestead, but a husband sets aside as many cattle for each of his wives for use by their families and these are inherited by the sons on the father's death. 591 592

INHERITANCE

Property is inherited by a man's sons or, failing sons, by his brother. A widow, on the death of her husband is inherited by one of his brothers, by a distant kinsman, or, if she is still young, by a son born of a different wife. The widow is *ot liend*, 'the wife of the grave',(1) and children born to her are called after the dead husband who is regarded as their *pater*. 428 587 851

MARRIAGE

Bridewealth

The number of bridewealth animals varies according to circumstances. Before the cattle plagues at the end of the 19th century 20 to 40 cattle were given; in 1932 the usual number was 15 to 20, and since that time the number has been further reduced. According to Evans-Pritchard the bridewealth cattle fall into two parts:(2) 583

1. The *dho kony*: the animals first handed over by the husband and due to

(1) Evans-Pritchard, *Africa* VI, 1933, p.161. (2) Ibid., p.159.

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

assimilation of these tribes were incomplete when European occupation of the country slowed down the momentum of colonization. The tribes living to-day to the south of the gulf who are said to be Luo in origin and who speak Luo are Kano, Nyakac, Karacuonyo, (Mumbo, Kabondo, and Karacuonyo), Kocia, Kanyada, Gem, Kanyamwa, Karungu, Kadem, Kwabwai, Kanyadoto, Kabwoc, and Sakwa. The other locations on the sketch-map are occupied by Bantu tribes who either speak Luo only, like the Kagan (included in the map in the Kocia location) and the Mohoru; or speak Luo as well as their own language, like the Kasigunga, Kaksingiri, and Gwasi. In one instance, that of the Wanjare, who are external to the Karacuonyo, a Luo tribe is said to have adopted a Bantu dialect to the loss of their own tongue because, according to the Luo myth, their ancestor killed his father in a hunting accident, and they are, on account of their Luo origin, regarded more favourably by the Luo than other Bantu-speaking tribes. The Kamagambo and Kanyamkago are said to be of Nilo-Hamitic origin, though both speak Luo to-day. Tribes which to-day speak only Luo and have Luo customs are regarded as Luo and it would be most insulting to call a member of one of them *'Jomme'* or *'Lange'*. There is much intermarriage between Luo of pure descent and assimilated or partly assimilated Bantu. At the present day there is also some intermarriage with the Kisii Bantu, though I was told that a Luo would not take one of their daughters as his chief wife. In Central Kavirondo assimilation in the areas of conquest and settlement has gone much further and, except for the Wahoho, who speak both Luo and Bantu, the line of linguistic cleavage is clearer cut.

Luo expansion at the expense of the Bantu was like a line of shunting trucks, each tribe driving out the one in front of it to seek compensation from one yet further in front, generally a Bantu tribe. Thus when the Uyoma and Asembo tribes jointly occupied what is now Uyoma territory they found there the tribes of Karacuonyo and Gem (of South Kavirondo) whom they pushed across the gulf into what was then Bantu country. Later the Uyoma people drove out the Asembo people into their present territory. These movements have led to a considerable dispersal of lineages so that lineages of the same clan are found to-day in both Central and South Kavirondo. Lineages of the same clan are found in the Gem tribe of South Kavirondo and in the tribe of the same name in Central Kavirondo, lineages of the Kanyada tribe have agnatic kinship with the Jokikaa lineage of the Alego tribe, and the Luo elements in the Kowak and Kamagera tribes of Tanganyika are said to have come from Kajulo and Kadimo and to have kinsmen in these areas.

It is not surprising therefore that the late comers who pushed other Luo tribes into contact with, and conquest of, Bantu are held to have been the least influenced by Bantu culture in their speech and way of life. This reputation is enjoyed by the people of Uyoma, Seme, and Asembo. The low-lying country of these tribes, a thorn-wood savannah plain with patches of swamp and treeless grassland, from which Seme takes its name, suffers from seasonal drought: in all reminding one of the homelands of some of the Nilotic cousins of the Luo in the Sudan.

3

Each Luo tribe (*pinj*), coterminous in the main, as has been said, with the present administrative location, was an autonomous political unit. As among the Nuer, one of the chief characteristics of a Luo tribe, and one by which its autonomy may be defined, is to be found in the different ways in which homicide was regarded and treated in pre-European days. There were local variations but in general the principle followed was that *cut*, compensation (a girl or cattle for a kinsman of the slain man to marry a wife with and raise heirs to his name,) was paid only for the killing of a fellow tribesman. No *cut* was paid for killing men of another tribe in war, raids, or as an outcome of the ritual demonstration called *kera*,[1] for they were *wangu*, enemies, and a state of feud between the lineages involved, and sometimes of war between the two tribes, developed. Likewise no compensation could be paid for slaying a clansman, but atonement was made by the sacrifice of an ox, provided by the kin of the slayer and eaten by representatives of the whole clan, who might moreover insist on the slayer marrying a wife to the name of the dead man. The line of political cleavage between tribe and tribe thus ran through the points at which the obligation to pay compensation or make atonement for homicides ended for a particular group of people and it is so regarded by the Luo themselves. For example, when the Uyoma people and the Asembo people lived in the same territory they paid compensation for homicide between them but when they separated they ceased to pay it.

In tribes in which the tribesmen, except for some small lineages of strangers (*jodak*) intermingled with the dominant clan, are all members of the same clan, such as Kanyamanyo tribe, compensation for homicide was not, or was rarely, paid, because the strangers had close kinship links with the dominant clan and would, I was told, have refused compensation in cattle, though they might have accepted a girl, since had they done so they would have emphasized a distinction they were anxious to obliterate. It was only in tribes in which there were beside the dominant clan other powerful lineages occupying their own lands within the tribal territory, as the *Jodolum* and *Kadem* in Alego, that *cut* was paid regularly for homicide and could be enforced by appeal to arms. In other words, where there was considerable political cohesion, expressed in terms of clanship, the killing of a man was treated as a sin; where there were marked sectional cleavages within the political unit of the tribe it was treated as a tort; and where there were social links but political separateness it was treated, unless it was a wanton act of individual homicide, as provocation to a feud but without moral disapproval or means of legal settlement.

The political boundary, which in its moral dimension signified a balanced hostility between adjacent tribal groups, had its material expression in the *thim*. The *thim* was a stretch of bush country, the home of buffalo,

[1] If a man of one tribe killed a man of a different tribe in a personal quarrel, and not in war raiding, feud, or ritual demonstration, he might pay compensation in cattle, e.g. if a Kanyamanyo man killed for some private reason a Kotia man who was taking cattle to his in-laws in Kanyamanyo territory.

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

lion, leopard, and elephant, left unoccupied between a tribe and its neighbours, a no-man's land between them. Such stretches of country were found between tribe and tribe but not between segments of a tribe, even when the segments were of different clans, e.g. between Alego and Gem but not between the Joßeje, the Jokakan, and the Jokaruoth, in Alego tribe. The *thim* was sometimes extensive, as broad as ten miles.

Tribe raided tribe across the *thim* dividing them and here took place also the ritual demonstrations of *tero buru*. When a tribal dignitary, a man of substance, or a renowned warrior, died, or a man was killed in war, he was left unburied till the whole tribe, or a large segment of it, had advanced across the *thim* and demonstrated against the homesteads of a neighbouring tribe, parading their cattle before them and calling on their men with insults and abuse to come out and fight. Cattle were taken to entice the enemy into battle by a display of booty at his door and to compell the *buru* party to hold their ground should they be attacked, it being held ignoble for a herdsman not to defend his herd to the death. In this way Uyoma used to go out against Sakwa, Seme against Asembo, Kisumu, and Gem, the Gem tribe to the south of the gulf against Kamagambo, Kabwoc, Karachuonyo, and Kanyamwa, Karacuonyo against Kocia, Gem, Myakac, the Kanii Bantu, and even the Lumbwa. Where a Luo tribe bordered a Bantu tribe they made *buru* against it in the same manner as Luo tribes made it against one another, the Bantu tribes of Kavirondo being structurally of the same order as Luo tribes. Usually the demonstrating party was not attacked. This only happened on occasions when *buru* parties of opposite tribes met, each declaring its intention to challenge the other to battle, or when the demonstration turned into a raid for cattle, or when homesteads were sacked. The custom is kept up, but to-day is no more than a mimic skirmish, the cattle being driven into the *thim* where the people smash the shrubs and grasses. They bring back with them handfuls of a creeper to represent cattle taken from an enemy and throw these on the roof of the dead man's hut.

There was nothing that can be described as political office in a Luo tribe. The *ruoth* was an influential person, but no more. He was richer than his fellows in wives and cattle and people came often to his house to eat there and to discuss affairs of the day. I was told that a poor man might ask him for the gift of a cow to help him marry and that it was considered an honour to marry into his family. Any man gaining an enhanced social position of the kind was called *ruoth*, though he was in most instances a member of the dominant clan of the tribe. Some warriors (*thundi*, bulls) won renown for their courage and resource in war and were asked to lead raids into enemy territory. Though admired, a war leader, sometimes called *thum jatelo*, was not necessarily a *ruoth* or rich man, for he received little, perhaps a single cow, as his portion of the spoils of war. The position was not hereditary but derived from individual prowess and initiative. The *mon gang*, 'father of the land', seems also, at any rate in some parts of Lowland, to have been a man of influence in each district. He was a senior member of a lineage of the dominant clan of the tribe and settled land disputes. The one who repre-

§ 2. Nilotic Kavirondo.

181 The generic name of the Nilotic Kavirondo is *Ja-Luo*. By the Bantu Kavirondo they are called *Awa-Nilo* or *Nyilo*, also *Awa-Nyoro*.

193 *Ja*, *Ko*, and *Yalo* are all prefixes signifying "clan" or "tribe" among the Nile tribes.

The prefix *Ha* signifies language among these people.

Kuusi or Gusi (call themselves *Gusi*).

Kyo or Kyoh.

101 479 131

Situate north bank of Nzoia River on the road from Mumia's to Port Victoria; a few live on south bank of the river. Nilotic tribe. Principal chiefs: Kero, Mulasi, Adipo, Usyongo.

Subdivisions:—

-Pungi. Chiefs: Kero, Mulasi and Adipo.
-Tachi—Usyongo, Nyasongi.

Kisoma.

Situate on north-west flanks of the Mumpiia Hills and on the lake shore north and west of Railway Inlet. Nilotic tribe. Principal chiefs: Ngolo or Ugolo and Ugolo.

Subdivisions:—

-Kisoma. Chiefs: Ondeo.
-Kwanonyo—Ngolo or Ugolo.
-Kadongo—Uyoma, Wonga, Ugonyi.
-Kowado—Ugolo, Ogolo.
-Kapenjo—Tawai, Magwiba, Wanchi.
-Sagami—Ogiro, Milaki, Kagonyo, Ndoma, Andeka.
-Kaledi—Kisoma.
-Takamonyo—Usendi.
-Yakagonyo—Ondeo, Aiyeko.
-Kanyawegi—Udalang.

The Kisoma and Yakagonyo clans are now amalgamated under Ondeo.

Kuni.

Situate south of the Kuni tribe between that tribe and Ugowe Bay. Formerly exclusively with the Kuni people. Nilotic tribe. Principal chiefs: Wadago, Yagodi, Awina.

Subdivisions:—

Kongo. Chief: Wadidowa.
Timo—Awina, Alomg.
Kalongi—Chandai, Okoko.
Kadipalo—Yagodi, Achiolo, Nikolo, Hiokoma.
Kanchowa—Okoni, Gumbo, Okolo.
Wuo—Wadago.
Kokori—Alwoma, Achiwoki.

The Kadipalo or Kadipal clan is subdivided as follows:—

Kanakijo—Uloi, Okuoh, Nyakundo.
Kanyiwuoro—Mlima (son of Yagodi).

4: Hobley G-5 (ca. 1900) 1902 FL11 Loc FL11

Kabira—Undju.
Kauru—Akuuki.
Kanyalong—Hukwe.

With the Were clan are incorporated the Kanyadwere, chief Odhanyo. With the Tiwo clan are incorporated the Dere.

Kendu.

Situate on north shore of Ugowe Bay. Nilotic tribe. In a measure adult community of Odera Ulalo. Principal chief: Adula.

Subdivisions:—

Uwala—Gwere, Yadwa.
Kalai—Adula.

Ugowe.

Nilotic tribe, situate at entrance to Ugowe Bay on north shore. Principal chiefs: Lwiki (died 1899), Nalya.

Subdivisions:—

Kalenda—Nalya, Kiwere.
Kanwanga—Lwiki (dead), Ogingo, Uteya.
Kalang—Obolo.
Kabwini—Kariwh.

The Kalenda clan live around Laiya Hill, the Kanwanga to the east and the others to the north.

Sesukwa or Sukwa.

Nilotic tribe on lake shore to the west of Gusii. Principal chiefs: Ugulu, Undirbi.

Subdivisions:—

Kanyaswanda Kasiawa—Ugulu, Uriaula, Uwando.
Kanduri—Nyala, Odaro Ogio.
Kanjowa—Bura.
Tukakudi—Odaro, Ukwangwan.
Kududi—Mowa, Ngwiwa.
Kanyaviya (incorporated with Tukakudi).

Piwa or Ukwa.

Situate on lake shore south of Wanga mouth. Country called Kadiwa; called Waynaka by Masai's people. Nilotic origin.

Subdivisions:—

Kadiwa—Asawa.
Kudi—Uwasi.
Wanga—Ugia.

The Kadiwa live on the lake shore, the other clans inland.

4: Hobley G-S (ca. 1900) 1902 FL11 Luo FL11

101
151
619

Soga.

Situate on the south bank of River Nzoia near Port Victoria. Nilotic origin. They are quite a small tribe. Principal chiefs: Uayando (Wa-Mooi), Uayando (Wa-Jua).

Kosa or Kadiba (often called Wa-Kitoto).

A Nilotic tribe living in an alluvial plain east of Ugowe Bay. Friendly, vast quantities of food, population large. Principal chiefs: Kitoto, Amimo and Ningili.

Subdivisions:—

Nyanuga or Moga. Chief: Kitoto.
Kajulo—Alonge (this clan is now all scattered).
Kadiba or Kasa—Yonanga, Hongo.
Kamolo or Kidoa—Okwaiki, Oyaro, Ningili.
Kabura—Amimo, Hongo, Uasagasa, Uyangi, Uyao, Arudi
Kasagaga—Uayao, Uayangasa.
Kabanya—Mbaya, Kitago, Uayanga.
Kasawanga—Undaiki.
Kimasa or Sua—Mimma, Ugundi, Uasaga, Ora, Yalendo.

The big chief Sandagi, now deceased, belonged to the Sua clan.

Khowa.

A Nilo tribe situated between the Lago and Kamasi. Head chief: Ulama, also Kakuri or Nyanga. The Kanyamasi (chief, Hamda) are allied to Khowa. They formerly lived near River Nzoia, but fled during Nilo fighting; settled near Odara Ulalo.

Subdivisions of the Khowa people:—

Makhoya. Chiefs: Omali, Chiwani.
Uawangwi—Ulama.
Wanyi—Mota.
Macha—Kibola.

Kabi.

Nilotic tribe, allied to the Lago and Soga tribes. Live near Gango lake, in the vicinity of the delta of the River Nzoia. Chief: Mastaga.

Kimdi.

They live on mainland opposite Lasinga country, called Kasagunga. Nilotic origin. Head chief: Akumba.

Subdivisions:—

Kimdi—Akumba.
Sidi—Makinya.
Dieng—Okech.
Tuna—Uamba.
Kasumi—Uwa.

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

101
131
619

Ramba.

Live on south side of Ugowe Bay, opposite Uyoma country Nilotic people. Head chief: Gori Kagalo.

Subdivisions:—

Kafweti. Chief: Awino.
Kabonyo—Osewi, Magalo.
Kajuang—Yariwo, Arani.
Kanyamwa or Kanyambo—Kagalo and Ogalo.
Yabunda—Chikungi, Uyama.
Saki—Usodo, Uyumbi, Mongwiri.
Kachola or Kologi—Othina.
Kumunga—Mwai.
Kuchieng—Owino, Tigo.
Kasudo—Ukuli.

[578] The Saki people live near Usen hill, and there is a feud between them and the Kanyamwa owing to the latter having been driven from the lake shore, and thus losing their fishing rights. The Saki are very friendly with the Uyoma tribe and the Kanyamwa with the Sawakwa.

Nyakach.

Live at south-east corner of Ugowe Bay. Nilotic origin. Very friendly people, live in great dread of the Lumbwa. Head chief: Uberi.

Subdivisions:—

Kadianga. Chief: Uberi.
Kabodo—Magero.
Jimo—Mwasa.
Kajembo—Atak.
Kandaria—Omuma.
Kugeta—Sewa.

Kalenkenge.

A large tribe of Nilotic origin on the south side of Ugowe Bay. They stretch from the west of the Nyakach people to the west side of Uma or Oma Mountain. The head chief is Nyakiti.

Subdivisions:—

Kanyajok. Chief—Nyakiti.
Uma—Ugwan.
Nyalue—Ngue.
Kanyipori—Umalo.
Adusti—Nyango, Okindi.
Yakandaiya—Ugalo, Oyugi.
Utimo—Ngare.
Kodera—Opiawili.
Unyango—Ugalo.
Akolo—Ashieng.
Ojumb—Ogado.
Ukwaloa—Kinwalo.
Kabondo—Lailla.

[pp. 57-60 not processed]

FL11 Loo FL11

constant activity in the field and home. The freedom with which the young women mingle with the men is striking, they may be seen among them, leaning on their shoulders when standing, as unrestrainedly as the men with men. The absence of clothing in no wise embarrasses them nor does it cause either sex a moment's thought; they are accustomed to this state of nature from childhood and feel no constraint in mingling freely together. They are extremely fond of ornaments and of painting themselves with different coloured clays, and often make patterns upon their bodies which they retain until the clay wears off. Their hair is often allowed to grow long, and youths frequently increase the length of it by twisting cords into it, greasing the whole with castor or other vegetable oil and rubbing red clay into it. Men and women mix freely together and often work in parties on the same field, singing songs as they work and keeping time with their hoes as they dig. Their homes in the hills are exposed and cold. Still, they do not appear to feel the cold winds and move about and work as freely as well-clothed tribes. As a tribe they combine agriculture with pastoral pursuits and their diet consists of milk and vegetables.

Origin of the tribe. According to their traditions they come from the north-west. Their ancestor Ramogi, they say, had seven sons named Kwenda, Nyakal, Owede, Nyadwat, Sakwa, Alego and Langho; and he adopted another son, Ugenyo. Langho, they say, is the father of the Masai and Setik tribes. They trace their own descent from Owede who had two sons, Omwa and Sagam. We thus have two groups forming the tribe, as follows: Omwa, whose descendants formed eight clans; Sagam, whose descendants form seven.

The descendants of Omwa:

1. Dongo	2. Nyuto	3. Orando
4. Kwamudi	5. Nyamwegi	6. Ndalo
7. Ogenyo	8. Nyakwal	

The descendants of Sagam:

1. Pwonja	2. Hadodi	3. Waranja
4. Rateng	5. Wango	6. Menya
7. Nyamoda		

2:Evans-Pritchard E-5 (1936) 1949
FL11 Loo FL11

lion, leopard, and elephant, left unoccupied between a tribe and its neighbours, a no-man's land between them. Such stretches of country were found between tribe and tribe but not between segments of a tribe, even when the segments were of different clans, e.g. between Alego and Gem but not between the Jokeyo, the Jokakwa, and the Jokerumb, in Alego tribe. The skin was sometimes extensive, as broad as ten miles.

Tribe raided tribe across the skin dividing them and here took place also the ritual demonstrations of two hosts. When a tribal dignitary, a man of substance, or a renowned warrior, died, or a man was killed in war, he was left unburied till the whole tribe, or a large segment of it, had advanced across the skin and demonstrated against the homesteads of a neighbouring tribe, parading their cattle before them and calling on their men with insults and abuse to come out and fight. Cattle were taken to entice the enemy into battle by a display of booty at his door and to compell the brave party to hold their ground should they be attacked, it being held ignoble for a herdsman not to defend his herd to the death. In this way Uyoma used to go out against Sakwa, Sauri against Asembo, Kisumu, and Gem, the Gem tribe to the south of the gulf against Kamagambo, Kabwor, Karwenyore, and Kanyamwa, Kanyamkoyo against Kwia, Gem, Myahar, the Kanz Basra, and even the Luanbwa. Where a Luo tribe bordered a Bantu tribe they made here against it in the same manner as Luo tribes made it against one another, the Bantu tribes of Kavirondo being structurally of the same order as Luo tribes. Usually the demonstrating party was not attacked. This only happened on occasions when here parties of opposite tribes met, each declaring its intention to challenge the other to battle, or when the demonstration turned into a raid for cattle, or when homesteads were invited. The rumours is kept up, but to-day is no more than a mimic skirmish, the cattle being driven onto the skin where the people snatch the shrubs and grasses. They bring back with them handfuls of a creeper to regenerate cattle taken from an enemy and throw them on the roof of the dead man's hut.

There was nothing that can be described as political office in a Luo tribe. The ruoth was an influential person, but no more. He was richer than his fellows in wives and cattle and people came often to his house to eat there and to discuss affairs of the day. I was told that a poor man might ask him for the gift of a cow to help him marry and that it was considered an honour to marry into his family. Any man gaining an enhanced social position of the kind was called ruoth, though he was in most instances a member of the dominant clan of the tribe. Some warriors (thandi, bulu) were renown for their courage and resource in war and were asked to lead raids into enemy territory. Though admired, a war leader, sometimes called thane jotelo, was not necessarily a ruoth or rich man, for he received little, perhaps a single cow, as his portion of the spoils of war. The position was not hereditary but derived from individual prowess and initiative. The man ganyo, 'father of the land', among also, or any one in some parts of Luoland, to have been a man of influence in each district. He was a senior member of a lineage of the dominant clan of the tribe and settled land disputes. The one who repre-

2:Evans-Pritchard E-5 (1934) 1949
FL11 Loo FL11

control the senior lineage of the clan ascribed to the sacred spear of the clan and guarded it towards the enemy before tribal war.

There were also a number of ritual experts. The most important of these, and the most important tribal figure among the Loo, seems to have been the *pakalo*, who in the language of African literature would be described as a tribal medicine-man or witchdoctor. There was one of these functionaries in each large tribal segment but one in a tribe was generally more influential than the others and a tribe requiring the services of an exceptionally famous *pakalo* might ask for them even if he lived in a distant tribe. His functions, which tended to pass from father to son, are said to have been to divine the fortunes of war, to curse the enemy, and to make magic to secure victory and the safety of the warriors. He kept his *bila*, war magic, in horns in a granary. He did not himself accompany a raid but in return for his ritual services he received part of the spoils and according to some informants was entrusted with its division. Consequently he was a rich, man of substance. The *pakalo* was also, at least sometimes, the *pakath* or rain *bath*, the rainmaker, while at other times the rainmaker seems to have been a different person to the *pakalo*. Rainmakers among neighbouring Bantu peoples were also consulted to. It is also said that the people had to wait permission of the *pakalo* to sow and that he had ritual functions in cases of homicide within the tribe and that he was a peacemaker who could intervene in a fight by dragging his leopard skin along the ground between the two sides.

4

In each tribe there is a dominant clan or lineage. The characteristics of a Loo clan are much the same as those I have described for the Nuer.

The Loo clan (*dho ot*) has a lineage structure, which means that every member of it can trace his exact genealogical relationship to every other member. Lineages (*dho wat*) are differentiated by adding to the name of a clan or of a larger lineage the expressions *wa* and the name of a smaller branch, as among the Lango, e.g. *Jonyo wa Jokayalo* are the Jokayalo major lineage of the Jonyo maximal lineage of the Jokingo clan. Collateral lineages are sometimes said to be *kanyingo*, presumably from *nyiko*, co-wife, to one another.

These larger clans associated with tribal territories are not always exogamous to-day, though they are believed to have been so in past times. It would be confusing to speak of two groups identical in their structural features by different terms because maximal lineages cannot intermarry in one and can intermarry in the other, so I use the word 'clan' for both, having stated a qualification to the accepted use of the term. Marriage is generally forbidden within the clan but it is recognized that the distance between maximal lineages may become so great, both in lineage-distance and through political and social separation, as to allow intermarriage between them. This has happened in the Jokingo clan of Anyo where two main lineages, the Jokingo and the Kelingo quarrelled and now intermarry sometimes. On the other hand marriage is not permitted within such big clans as the Kelipiket of Imma, the Kelkaromyo of Karomyo, and

Government.

Chiefs as rulers. There is no king of the country, nor is there any single paramount chief; the Bantu chiefs claim equal, if not superior, rights to the land. Certain chiefs rule over extensive districts inhabited by the Nilotics, and their rights as leaders are considered to be hereditary; they are also looked to in cases requiring settlement or legislation.

Land tenure. Land which has not been cultivated in the past may be tilled by any family; but, when once it has been tilled, the community regard it as the property of the family whose ancestor first cultivated it. Should it be left fallow for a number of years, no other family may appropriate and till it without first obtaining the original owner's permission. Few people seek such permission, preferring to dig virgin-land which will afterwards belong to their children.

Local chiefs as the magistrates. The people live in communities. They build their houses in close proximity and in most cases surround them with a growing fence, leaving a gateway which can be closed during the night or in times of danger. Such a village group is ruled by a sub-chief who is under the authority of the district-chief. The chief of a village is magistrate and controls the general affairs of his people. This chief levies no taxes, but his people make him presents of goats and sheep, and of grain also at harvest time.

Courts and court fees. Any person wishing to bring a charge against another for any offence, real or imaginary, pays a small fee to the chief of the village before whom he lays his complaint or accusation. The chief or elder then summons the accused person and appoints a time when the case shall be heard. The chief sits with one or two village elders and gives his judgment. A person may appeal from a village chief to the principal chief in the district, and the elder who first tried the case will then go to the superior chief to be present when the case is reheard. The parties appealing have to pay fresh court-fees before the case is retried. The punishment in almost every case is a fine and the amount is determined by the gravity of the case. The losing party has to

16: Northcote G-5 (no date) 1907 FL11 Loo FL11

have absolute power, but in reality their influence is not great. Each chief subdivides his territory, placing each portion under a sub-chief. These sub-chiefs or headmen are supposed to attend frequently at the chief's village in order to hear and carry out his orders. If a crisis arises, an informal council of the heads of the village is called and the *patres familiarum* can express their views, though the decision rests with the chief. There is no kind of voting. This council will also assemble if the rule of the chief becomes intolerable. They may threaten to secede, but their resistance is always passive; the usual result, however, is that one or more of the headmen set up as chiefs on their own account, and quietly disregard the orders of their quondam superior. Land is held in common by the members of each clan, but jealously guarded from subjects of all other chiefs. A man may, and frequently does, move from one clan to another, but in that case he has to obey the orders of the chief to whose clan he has attached himself. There are no formalities attendant on such a change.

Trespass by the members of one chieftaincy upon the land of another is indeed the usual cause of the frequent small quarrels which arise and very often lead to bloodshed.

Internally, however, private ownership of land has to some extent made its appearance. The *Jaluo* village represents a family, the headman being the father or (if he be dead) the eldest brother. Besides his family he will, if he is a chief, or sub-chief, generally shelter one or two retainers whom he calls his *askari*,* police. When the time comes for laying out the *Shamba* or agricultural land, each adult male and female marks out and tills his own piece, the married women being helped by their daughters and younger sons; although the family in practice share the produce, theoretically the crop from each plot belongs to the member who tilled it; thus, if one of the sons wishes to sell some grain he can only sell what he has grown himself, and, similarly, one *askari* reaping what another has sown would be considered a thief.

Cases occasionally arise which illustrate this: if A's cattle or goats wander into B's shamba, though A and B live in one village, B claims compensation. Private tenure is, however, only temporary. If a village uses a certain piece of land for a year and then leaves it, another village may cultivate there; but as the *shambas* are usually close to the villages, and villages are separated by some little distance, such cases of appropriation are practically unknown. The rights, however, to a certain piece of land are only squatter's rights and confer no claim to property.

In shape the *Jaluo* village is circular and is fenced round with euphorbia bush, stone or mud walls, or wattling, as may be most convenient. In the centre is the cattle pen; around this are the store houses of basket or wicker work; they are raised some two feet from the ground and are about five feet high and three feet in diameter; there is a small opening near the top sufficient to

* Swahili word adopted.

17: Southall E-5 (1946-1947) 1952 FL11 Lee FL11

friendly genus of *adhoic* (Lee hockey) between the smaller segments, through the wrestling and club-fighting of medium segments to the ritual warfare and open conflict of the larger lineages. Etymologically *diwe* means 'mouth of house' (*dhe* mouth; *or*, house) and, as quotations will show, often refers to the issue of children from the doorway of their mother's hut. This might further imply a principle of matrilineal descent, but of this there is not the slightest trace among the Lee. All their lineages are essentially patrilineal, but the original ancestors from whom they spring, and whose names they bear, may be either men or women, depending on whether segmentation took place between brothers of an elementary family or co-wives of a compound family. The significance of this etymology, and of the Lee interpretation of it, seems to be that the unity of uterine brothers in their mother's house is to them symbolic of the solidarity of members of the same *diwe*. But, as has been previously noted, uterine brothers are also regarded from the opposite point of view, as symbolic in their quarrels of the fission between lineage segments. Nor is this inconsistent, but is in line with the character of all Lee lineage segments, which in one context emphasize their unity against all outsiders and in another their internal divisions.

The *diwe* of Kanchwonyo is to its members the largest lineage which carries general social functions and which occupies one continuous block of territory. It is subdivided into smaller *dimoli* down to the level of those which are the primary settlement units. This is the class A system of segmentation which, as previously noted, may be from twofold to sixfold, and is usually fivefold in Kanchwonyo, according to the particular agnatic line taken. The points of origin of these *dimoli* are only a small selection from the very large number of points of potential segmentation which appear in the whole genealogy of Kanchwonyo (see large genealogical chart, Fig. 6, facing p. 50). For all uterine brothers, or co-wives with surviving male agnatic issue, from those of living families back to the earliest ancestors of the genealogy, represent points of fission in the class B segmentation, some of which have achieved class A status as *dimoli*.

Kanchwonyo as a *diwe* is thus a group of people claiming common agnatic descent from Kachwonyo and subdivided at several successive levels into a number of smaller *dimoli* all segmentally articulated. Kanchwonyo as a continuous block of territory occupied and controlled by this group is also correspondingly subdivided, so that the arrangement of parts into a whole coincides in both cases. It is when they have the territorial aspect of a *diwe* particularly in mind that the Lee refer to it as *gwang'* (pl. *gwogo*). The basic connotation is land, but the social group occupying the land is always implicit in the term *gwang'*. It would never be used for unclaimed or unoccupied land, which is *thim* (wilderness). Sentiment, in the sense defined above is thus a reasonable translation of *gwang'*. In Kanchwonyo all *gwogo* are thought of as being essentially lineage settlements. When the Lee have a territorial unit in mind as being the most inclusive of its kind, as they do in the case of Kanchwonyo itself and occasionally in some contexts the *dimoli* which are its major segments also, they refer to them as *piny* (country) rather than *gwang'*. The average population of territorial *gwogo* is approximately 500.

Dimoli, which are major segments of the same superordinate lineage, refer to one another as *dhanda* (pl. *dhandani*). The etymology of this word is uncertain, and it

4: Hobley G-5 (ca. 1906) 1912 FL11 Loo FL11

village is a long way off the girl's relations obey at his village, but if they can manage to do so they return the same day. Next day the bridegroom's brothers and his other wives take the bride back to her father's village and there is a great feast and much drink; the bridegroom does not go.

The father of the girl next day presents his daughter with a goat and she returns to her husband. The girl's husband then continues to make payments to his father-in-law; the total amount it is necessary to pay varies from two to six cows; if he stops paying his wife will go off to her father's village and stay there for a month or so until the cows resumes payments. Before the big attack of cattle plague in 1890 and 1891 it is said that as many as forty cows were sometimes paid for a wife.

If a woman does not bear her husband a child quickly the husband stops his payments, but the husband has no claim for the return of any of the property as long as the woman stays with him. If a wife dies and has borne no children the property is returned, or one of her sisters is given the man to wife and the man only pays about twenty goats for the sister.

If a woman will not stay with her husband she is married to some one else, and the first husband is repaid from what the second husband pays. If a woman has a child and is divorced she can leave her husband but the child belongs to him; if the child be a boy, when it grows up and the mother grows old she will generally come back to live with her son. If after a marriage has been arranged a father is loth to part with his daughter the young man employs his friends to waylay the girl in the daytime. If the girl however refuses to stay at her suitor's village and runs away, the property paid over is returned without delay and the match is broken off. If a woman remains unmarried for a longer period than usual she often goes off to a chief or someone with plenty of cattle and states that she intends to stay there and work for him; in such a case she is usually taken to wife, but the man pays much less than is nominally customary. Chiefs have from ten to forty wives. They are generally speaking very moral in their domestic relations. They do not intermarry in the same clan, but a man will marry the daughter of a man named the same as himself.

Pottery.—All pottery is made by women and is similar to that of the Nandi Kavirondo, and consists of water pots, cooking pots, beer pots, etc.

Dyes; weaving.—These people do not use dyes, neither do they use, but they soften skins by rubbing in fat and hand-working till soft.

Arms, etc.—Their shields were formerly made of buffalo hide but are now made of cow hide; the shields are usually very large, covering round the body of the man carrying it. They also make shields of matumbi wood (called *Orindi*). They have a great fancy for spears with shafts of enormous length, ten feet or more; the heads are very small and insignificant. The clubs and clubs to a small extent; the former weapons are however I think copied from the Masai or Nandi. Also use bows and arrows; the arrows were formerly poisoned, but

622
428

When a chief dies the son chosen by the chief succeeds him; the successor is chosen as a rule some years before the chief dies. The successor will however divide the private property of his father with his brothers like anyone else.

Religion.—They call the Divinity by the name Chiong, which is the sun; when a man comes out of his house in the morning he spits to the east and in the evening he expectorates to the west. If the sunset is extremely red it is said to be a sign that an important man will die in the tribe. They believe that the spirit of a man goes upwards at death.

Nandi FU?

N 773 B21

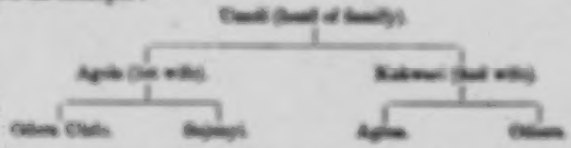
About 30 miles east of Kisumu in Nandi country, there is a forest-clad extinct volcano named Tinderet, and the Kavirondo Nandi, who inhabit its southern and western flanks, tell a legend that high up on the mountain there is a cave, in which Ilet, the spirit of the lightning, who descended there in the form of a man, took up his abode. After his descent it rained incessantly for many days, and the Ogiek or Wandorobbo hunters who lived in the forest were nearly all killed by the terrible downpour. Some of them, while searching for the cause of the rain, found Ilet in the cave and wounded him with their poisoned arrows. Thereupon he fled, and died in *Arab*[1] Kisumu's country; directly he was dead the rain ceased.

Laws of Succession Among the Ja Luo.

L 622

In the Gesi tribes, and several others of Hittite origin, the following rule holds with regard to the chiefainship. The chief is always the eldest son of the wife whom his father married first.

To give an example :—



Agola was married to Uandi before Kakwari, therefore the chiefs are henceforth chosen from the offspring of Agola, and upon the death of Odera Ulalo, his son being quite small, the second son of Agola, Sajanji by name, was elected chief. This rule was observed, although Agina is an older man than either Odera or Sajanji.

It is possible that this may point to the existence in past times of similar fissions among the two.

Origin of Name of Dholuo or Kavirondo.

L 101

I have often made enquiries into the origin of the name of Kavirondo, and the Kisumu elders inform me that it is the name which the people of the south side of Kavirondo Gulf apply to the people of the north side; it is, however, a term only used when they meet at a dance and combe khang and sing about old times. They call the people of the north side Kavirondo, because they were vanquished by the latter and driven across to the south side of the bay; it was then, originally, more or less an epithet of reproach.

N 763

[1] In the Nandi language *Arab* in front of a proper noun means "son of." thus Arab-Kisumu means "son of Kisumu."

Government.

693 **Chiefs as rulers.** There is no king of the country, nor is there any single paramount chief; the Bantu chiefs claim equal, if not superior, rights to the land. Certain chiefs rule over extensive districts inhabited by the Nilotics, and their rights as leaders are considered to be hereditary; they are also looked to in cases requiring settlement or legislation.

423 **Land tenure.** Land which has not been cultivated in the past may be tilled by any family; but, when once it has been tilled, the community regard it as the property of the family whose ancestor first cultivated it. Should it be left fallow for a number of years, no other family may appropriate and till it without first obtaining the original owner's permission. Few people seek such permission, preferring to dig virgin-land which will afterwards belong to their children.

621 **Local chiefs as the magistrates.** The people live in communities. They build their houses in close proximity and in most cases surround them with a growing fence, leaving a gateway which can be closed during the night or in times of danger. Such a village group is ruled by a sub-chief who 622 is under the authority of the district-chief. The chief of a village is magistrate and controls the general affairs of his people. This chief levies no taxes, but his people make him presents of goats and sheep, and of grain also at harvest time.

692 **Courts and court fees.** Any person wishing to bring a 691 charge against another for any offence, real or imaginary, pays a small fee to the chief of the village before whom he lays 695 his complaint or accusation. The chief or elder then summons the accused person and appoints a time when the case shall be heard. The chief sits with one or two village elders and gives his judgment. A person may appeal from a village chief to the principal chief in the district, and the elder who first tried the case will then go to the superior chief to be present when the case is reheard. The parties appealing have to pay fresh court-fees before the case is retried. The punish- 681 ment in almost every case is a fine and the amount is determined by the gravity of the case. The losing party has to

14: Johnston. C-4, 5 (no date) 1904 FL11 Loo FL11

765 a dead person shave their heads for three days after the death. The eldest son of the deceased sits on a stool outside the village, and has his head shaved. If any one of importance dies, the neighbours do not 766 cultivate for three days after the death. If a big chief dies, all the surrounding people collect at the village, and in such cases even hostilities between clans are suspended, and all join in the funeral rites of the late chief, even if he happens to be at war with some of his dependent clans. In the case of the death of a chief, a new hut is built. The grave of the chief is dug by his brother. A cow or kibe is placed at the bottom of the grave, and the head of the corpse is covered with a water-pot. Seeds of every kind of grain grown in the vicinity are put into the grave, but sweet potatoes are excluded. The people dance and drink "tembo" for ten days, and slaughter many cows. The men wail for ten days, but the women wail every morning for a year. No one cultivates the fields for ten days.

768 When a man dies, his property goes to the brother, if the children are small. If the eldest son is grown up, he takes the property and gives his brothers a share, but a man is not allowed to take the amount paid by any one who marries one of his sisters. This marriage payment goes to [537] the deceased father's brothers. The brothers of the deceased take his wives, but the eldest son probably takes the youngest wife of his deceased [522] father. When a chief dies, the son whom he has chosen succeeds him. This successor is chosen really some years before the chief dies. The successor divides the private property of the chief with his brothers.

767 When a warrior has killed a man in warfare, he must (besides 767 shaving his head) catch a fowl and hang it round his neck head uppermost. He must not enter his home village until this has been done. Whilst the fowl is suspended to the man's neck by the beak its head is severed from the body, and the head is left hanging from the man's neck. The warrior then enters the village, and shortly afterwards prepares a big feast to propitiate the man he has killed, so that his ghost may not give trouble. 768 If a house is struck by lightning, and any one is killed inside, the headmen of the village must obtain a male fowl of a red colour and walk round the house holding up the fowl three times. The house is then broken up, and the wood is used for other purposes. When desiring 769 to make peace with another tribe with whom they have been at war, they kill a sheep and put part of it into a wooden mortar such as is used for crushing grain. The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been wronged, and which is suing for peace, must [540] then go to the head village of the conqueror and proceed to scrape up the cattle dung. This is accepted as a kind of submission.

105 Like the Bantu Kavirondo, the Ja-luo are in the main a healthy people.

776 believed to be the creator and originator of all things but he is not worshipped. Earth and death are ascribed to his action. According to Spencer, Nats is found in large trees, and in time of trouble or sickness offerings are made to him of an ox[sic] killed under a large tree, the meat to remain at a little distance away.[11]

Johnston states that the Lua believe in a supreme god, Chiang, which is the name for the sun.[12] Stan, however, relegates the sun to an inferior position and states that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.[13] Hartmann states that Lua worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the sun sets appears.[14]

It is impossible at present to give a comprehensive account of Lua beliefs from the scanty information available.

ANCESTRAL SPIRITS

775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost (*jwok*, pl. *jwogi*) and the Lua methods of dealing with it. *Jwok* is the Lua equivalent of the Shilluk *com*, the Azande *kwoo*, Lango *ajwok* and the Dinka *aciek*. A spirit which has been dangerous by the living, the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - may of these may become a *jwok*, and comes back to those who wronged it. The Lua regard ghosts as one of the principal causes of sickness and other misfortune, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful coercion of conduct within the family and kindred group.[15]

785 The diviner (*nyanga*) discovers the cause of sickness and, if it is due to a persecuting spirit, sacrifices are offered at his grave with appro-775 priate ritual. If the ghost is not appeased by this attention, another diviner is called in, the angels. To protect the sick man's homestead the angels burrow in at night at a pot containing medicines. In the last resort the jujuist is called in; he is in sacrifices and the ghost carried that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 Normally, a ghost only haunts a kinsman, but a man who has been mur-783 dered may haunt his murderer. Purificatory rites are performed for a man who has killed a man in battle; these are conducted by a man called *jago* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the ghosts cast by diviners and assume the appearance you've seen.

were other sons by other wives growing up in the dale (dale = homestead), a woman would hasten the marriage of her own son lest when it came to paying the bride-price for him cattle might be short on account of the claims of other sons on the family resources.

Between the permission to marry, however, and marriage itself, there intervened a long chain of events, extending over months, and sometimes even over years. The mere choice of a bride was hedged about with complications and difficulties that often delayed a man's marriage considerably. This choice was, in the first place, limited by the rule that he might not marry any woman related to him, however distantly, either on his father's or on his mother's side of the family. To do this would be to commit incest, and would bring terrible consequences upon the clans and families concerned. If it happened, as it sometimes did, that a man fell in love with a girl without knowing whether he was related to her or not, only to find that she belonged to one side or other of his own family, the discovery put an end immediately to all intercourse between them. If, on the other hand, it could be established that the two were not related, the man would get permission from his father to take her as his wife, and the usual negotiations would be put in hand. It was, however, more usual for a man to leave the choice of his wife to his father, who would select a suitable maiden with regard only to the mutual advantage of the two families concerned. In this case neither the young man nor the girl were regarded as at liberty to relieve the marriage. If the son did so, it was at the cost of his father's deep displeasure; and this was a serious matter in the old days when a man was entirely dependent upon his father, not only for the means to acquire a wife, but for his livelihood in general. So to rebel was unusual. The girl was equally at the mercy of her parents. If she disliked the husband selected for her the only way to escape the match was to run off with another man. But if she did this her lover's father would only pay a very small bride price for her, even as little as a single cow, and not only was she considered to have disgraced herself (and materially in view of the severe pecuniary loss suffered by a family losing a daughter for whom the customary cattle had not been received) but her conduct was regarded as a slur on the whole family.

If a young man was specially anxious to marry a girl who was not debarred by any relationship from becoming his wife, and who returned his affection, he could establish a sole claim to her by working her breast before witnesses. After this ceremony she could not be given in marriage to any other man. The existence of such a custom is sufficient proof that among the Lue, as among the more civilized, marriage is often the outcome of a strong personal attraction between a man and a woman. And the fact that tribal custom provides for such a contingency within an otherwise largely utilitarian

24 § 25 indicate that sowing time is at hand. In the autumn, there is the ordinary Abisan kite, which comes over literally, at times, in thousands, loading in the air, and on the ground on the swarms of flying ants. Some withhold their sowing until these birds appear.

24 § 32 In exceptional cases an important sacrifice, called " kilo " was performed before sowing took place. If the " Jadwong' kilo " was warned in a dream of impending disaster to the coming season's food supply, he called the elders of the community together for the purpose of the ceremony. " Kilo " was performed to avert any disaster threatening the community. It was always performed in the early morning, before the cattle had gone out to grass. The present " Jakilo " in Sakwa location performed the ceremony of " kilo " in 1931 when the people of Sakwa had a boundary dispute with their neighbours of Asembo. He performed it again in the early months of 1933 to get rid of the locusts. It is natural that not a few in Sakwa attribute the absence of locusts this year to the effect of this ceremony.

24 § 77 When the time was ripe for sowing, the " Mikayi " or chief wife of the head of the community, was always the first to sow. None dare begin their sowing until the " mikayi " had thus given permission. Any who were so bold as to begin before the " mikayi " were made to feel the displeasure of the community. As recently as 1931 I have known a man to come under discipline for sowing too soon. But what with the efforts of the Agricultural Department, pressing upon the people the wisdom of early sowing, together with a widespread knowledge of the nature of the months, re-inforced by the rise of individualism, accompanied by the breakdown of tribal authority, the influence of the " mikayi " is steadily waning. Amongst the more advanced sections of the communities it has ceased to exist, and they are no longer subject to discipline for early sowing. After sowing comes a pause, but not for long. About April weeding begins. This is shared in by all. Amongst the sturdier crops, it is done by the hoe, but in crops like the small millet, called " bal," the seed is sown too closely for there to be room for a hoe, so it has to be done by hand, the women squatting down on their heels and pulling up the weeds. This results in a much trampled crop, but it very soon recovers, and suffers no damage. In recent years the Administration has made great efforts to get people to eradicate the striga weed, called by the Luo " kayongo." This weed shoots up, curiously enough, after the customary weeding has been done. The Luo-let it grow in spite of the fact that they know that land infested with it must be left for a term of years. I have over and over again tried to persuade them of the wisdom and benefit of getting rid of it, but to no avail. Anything which comes after the routine weeding has been done is allowed to remain.

12: Evans-Pritchard E-5 (1936)1950
FL11 Luo FL11

775 133 In one form or another the word *cira*, and in some
171 degree the notion of ghostly vengeance for which it stands, have been recorded for a number of Nilotic languages: *cira* for the Shilluk and Nuer, *acira* for the Dinka, *acira* for the Anuak, *cilwo* for the Luo of the Bahr al-Ghazal, *kwoc* for the Acholi, and *dyoc* for the Lango.

753 Very little is known about this concept among the Luo of
755 Kenya. Routledge (*The Northern Bantu*, 1905, pp. 186ff. and
775 189) tells us that sickness may be due to a ghost, and that a medicine-man is consulted to find out which ghost is causing the trouble and the cause of its dissatisfaction. These troublesome ghosts are usually those of grandparents who afflict their grandchildren because their children have been neglectful of filial duties. The medicine-man orders a shrine to be built by the grave of the aggrieved grandparents and the sick person's father then offers a sacrifice. Ghosts may also possess persons and cause them to have fits. When a man kills another in war the ghost of the dead man is thought to cling to his slayer until it is released by ceremonies. Other writers on the Luo do not add to this information, and in view of our ignorance about the subject I record what few notes I have on it.

775 A troublesome ghost is called *juogo* (*plur. jwondi*), a
626 word translated 'devil' by the Fathers of St. Joseph's Society (*A Handbook of the Kavirondo Language*, 1902, p. 8). When a ghost is aggrieved it is unhappy among the dead and may cause injury to those who wronged it in life, the verb *cuno* and the noun *cira* being used to describe this ghostly vengeance. In the course of my inquiries I was told that the following are typical reasons for a dead person lamenting a kinsman: a man is killed and his kinsmen do not exact vengeance or compensation for his death; a man dies unmarried owing to lack of cattle; a man is blamed for some action and commits suicide; a girl is forced into marriage and commits suicide; a son dies while resentful because his father has favoured his brothers; a married woman dies after being accused of witchcraft and leaves; a man dies in a state of shame for some action of his, or in resentment for some affront; a woman dies after an

[p. 86 B]

12: Evans-Pritchard E-5 (1936)1950
FL11 Luo FL11

775 quarrel with her husband or one of her co-wives,
and a ghost is forgotten by his kin. It is said that if a corpse
626 smells it is a sign that the dead person is ill disposed. As the
Luo regard the ghosts as one of the principal causes of sick-
ness and other misfortunes and since it is believed that
almost any wrong done to a kinsman may be punished by
him after his death, it may be supposed that this representa-
tion is a powerful sanction of conduct within the family
and kin. I was told that any old person who is neglected
may cause a relative to be more attentive by the threat "You
will see me," meaning that when the person is dead he will
haunt those who have neglected him unless they make
amends. People who are happy and contented in life do not
cause trouble when they are dead. It is the disgruntled and
resentful who cause trouble.

763 Luo who fall sick get a diviner (*ajuoga*) to discover the
753 cause, and if he says that the sickness is due to a particular
775 ghost on account of some grievance they hasten to compen-
[D7] sate (*yoh*) the ghost for the wrong they have done him by
sacrificing an animal or fowl at his grave. It is customary to
sacrifice a quail or fowl for a sick woman and a sheep or
goat for a sick man. When a beast is sacrificed it is first
ordered while whoever is conducting the ceremony makes
an invocation (*lame*) over it. If the sacrifice is acceptable to
the ghost the animal urinates. They then rub in black (*wiro*)
with the moist earth where it has urinated, and afterwards
sacrifice it. The name is given by the sick man's kin and a
strip of the skin is tied round his wrist.

755 If the *jacien* is not appeased by sacrifice they may get a
775 magician called *magalo* to protect the sick man's home-
stead. He burns a pot containing medicines in or just out-
side the homestead. If the ghost continues to cause trouble
they summon an exorcist (*nabii*). He first sacrifices an ox
and warns the dead man that if he is not content with the
sacrifice he will dig up his bones and burn them and throw
the ashes into lake or marsh. Luo told me that they prefer
to get a Bantu to do this for them, if it is found to be
necessary, and that sometimes instead of digging up the
dead man's bones the exorcist makes a hole in the grave
and pours boiling water down it.

[p. 86 c]

THE NILOTIC KAVIRONDO.

By G. A. S. Northcote.

101 The Nilotic Kavirondo, or *Jaluo* as they should more properly be called, who inhabit the north-eastern shore of the Victoria Nyanza, belong to the same family as the great Dinka tribe of the Soudan and are near relations of the Alur and Acholi tribes which live on both sides of the Nile near Wadlai, the differences being far less marked than those between two adjoining Bantu tribes usually are.

114 In all probability, therefore, the Jaluo originally formed one tribe with the Acholi. What their reasons for migration were cannot be ascertained, but probably it was due to overcrowding or to a dispute about the chieftaincy. The natives themselves can throw but little light on the matter: they state that they came from the north-west under one big *chief* and that when they again became too numerous they split up into smaller chieftaincies. The fact that they lay stress on their again increasing numbers points to the conclusion that overcrowding was their motive for migrating; but as will be seen later, they use *secession* as their *chief* weapon against an unpopular chief. Had they been driven out by conquest there would be abundant traces of such a cause, but no such signs are visible.

● [124]

192 In appearance the Jaluo are a fine race, not so much remarkable for beauty of face as for stature and development. They are a large-boned and deep-chested tribe, somewhat fleshy and very muscular. They present a great contrast in this last respect to the other Nilotic tribes in British East Africa, the Masai, Nandi and Lumbwa. All four are capable of great endurance, but none of the last three named can claim to be a muscular race. The superior physique of the Jaluo is probably due mainly to their agricultural and industrial habits and to the fact that their food is mainly vegetable, while up to the great cattle plague of 1892, the Masai, Nandi and Lumbwa lived entirely upon animal food.

[265]

Facially the Kavirondo have rather aquat noses, large mouths and big wide-opened eyes. The everyday dress of the men consists of a goat skin hung over the left shoulder, or of nothing. In most cases they have quantities of iron wire on their legs and arms and strings of beads round their necks. The women are usually completely nude, except that married women wear a small grass tassel behind, hanging from the waist; latterly, however, they have taken to wearing a strip of cloth round the waist about six or eight inches in breadth and only just covering in front.

291 [101]

[51] The tassels are discarded when a woman's husband dies and cannot be again worn until she is re-married. It is significant of the respect which the Jaluo have

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

was regarded as a juvenile. The homestead was supervised by the levir of his father's second wife. The young man desperately wanted to marry. His stepmother, however, had spread the rumor that he had had syphilis. Therefore none of the eligible girls would have him. He went to a medical dispensary off and on for several months but treatment was not successful. 762 159

While he was away, a half brother, the son of the senior living wife of the village, married without his knowledge. The young man obviously had been under intense emotional strain caused by the rumors and gossip associated with the fact that he had a venereal disease. He was the senior son by Luo customary law and on marriage would be the head of the village. His half brother had taken a wife. This added to the humiliation and shame and would bring ridicule upon him whenever he met with his contemporaries for the rest of his life. This was too much. He went to the *thim*, the no man's land surrounding his clan grazing area and the place where the ancestors are normally placated, and there hanged himself from a tree. [626]

His brothers and relatives were concerned about his absence and suspected what he had done. He was found by one of them after many days and his family and minimal lineage group completely destroyed the tree, including the roots, and there on the spot buried him and performed his funeral rites. The family was cleansed by the *jabilo* and the ancestors placated to receive his spirit by the sacrifice of a white cockerel and a black sheep. [783]

The first son to be born to his brother's marriage was named after him to placate his spirit and to continue his name in the lineage genealogies.

Naming a child for a relative who had died is used by the Joluo in many ways, but only after consultation with the *jabilo*. It is obvious therefore that any misfortune which occurred to the family or to the lineage segment after this suicide was attributed to it. The fact that the first child born after the suicide 762 553

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762
159
684

a criminal offense. He was caught, and the Court fined him a relatively large sum of money and gave him thirty days in which to pay. He became very depressed and, after unsuccessful attempts to raise the money, he hanged himself.

Suicide Case No. 6.

159
762
685

The man involved was in his early thirties, and was in a position of trust with a Local Government body in Nyanza Province. He was alleged to have abused his position of trust by embezzling a considerable sum of money. The auditors had come across this defalcation in the books and brought it to his attention, but before he was arrested he killed himself by falling on a knife. Both the cause and the method can be said to be modern.

159
762

Case numbers seven and eight involve a loss of status, but on the other hand are attributable to poverty.

Suicide Case No. 7.

[888]
[626]

An old man whose wives had all died had to depend on his sons for support. The sons supported the old man while in his village but, after a quarrel, built a new village of their own and refused to build a house for him. As he had no one to support him and as he felt that he was ostracized by his sons, he had, to quote the Luo elders, "No other recourse than to commit suicide. His sons killed him and will suffer." He hanged himself on a thick tree which grew by a river, where he was found by an ex-chief. The Luo elders were quick to point out that he achieved his revenge, because the descendants of his sons were already few in number and mostly girls. "The line will die out because they killed him."

Suicide Case No. 8.

The man in this case was a widower living with his only son, who gave him food, but could not afford to maintain the ap-

2:Evans-Pritchard E-5 (1936) 1949
FL11 Loo FL11

control the senior lineage of the clan sacrificed to the sacred spear of the clan and pointed it towards the enemy before tribal war.

There were also a number of ritual experts. The most important of these, and the most important tribal figure among the Loo, seems to have been the *jobido*, who in the language of African literature would be described as a tribal medicine-man or witchdoctor. There was one of these functionaries in each large tribal segment but one in a tribe was generally more influential than the others and a tribe requiring the services of an exceptionally famous *jobido* might ask for them even if he lived in a distant tribe. His functions, which tended to pass from father to son, are said to have been to divine the fortunes of war, to curse the enemy, and to make magic to secure victory and the safety of the warriors. He kept his *bido*, war magic, in horns in a granary. He did not himself accompany a raid but in return for his ritual services he received part of the spoils and according to some informants was entrusted with its division. Consequently he was a wealth, man of substance. The *jobido* was also, at least sometimes, the *jobwoth* or *mon bwoth*, the rainmaker, while at other times the rainmaker seems to have been a different person to the *jobido*. Rainmakers among neighbouring Burun peoples were also appealed to. It is also said that the people had to wait permission of the *jobido* to sow and that he had ritual functions in cases of homicide within the tribe and that he was a peacemaker who could intervene in a fight by dragging his leopard skin along the ground between the two sides.

4

In each tribe there is a dominant clan or lineage. The characteristics of a Loo clan are much the same as those I have described for the Nuer.

The Loo clan (*dho ot*) has a lineage structure, which means that every member of it can trace his exact genealogical relationship to every other member. Lineages (*dho wat*) are differentiated by adding to the name of a clan or of a larger lineage the copulative *wa* and the name of a smaller branch, as among the Lango, e.g. *Jowijo wa Jokayida* are the Jokayida major lineage of the Jowijo maximal lineage of the JoAlego clan. Collateral lineages are sometimes said to be *kanyigo*, presumably from *nyiaka*, co-wife, to one another.

These larger clans associated with tribal territories are not always exogamous to-day, though they are believed to have been so in past times. It would be confusing to speak of two groups identical in their structural features by different terms because maximal lineages cannot intermarry in one and can intermarry in the other, so I use the word 'clan' for both, having stated a qualification to the accepted use of the term. Marriage is generally forbidden within the clan but it is recognised that the distance between maximal lineages may become so great, both in lineage-distance and through political and social separation, as to allow intermarriage between them. This has happened in the JoAlego clan of Alego where two main lineages, the Jotieje and the KaDenge quarrelled and now intermarry sometimes. On the other hand marriage is not permitted within such big clans as the KaNyikal of Seme, the KaRacuonyo of Karacuonyo, and

10: Roscoe 36-9 (ca. 1950)1915
FL11 Loc FL11

pay the fine, and from the amount the judge takes a portion for himself and passes the remainder to the successful litigant.

Making peace between sections of the tribe. Should there be a quarrel between two sections of the tribe and a desire be felt to end the strife, the chief of one section goes to the chief of the other with a few of his principal men, and they spend the afternoon and night together discussing the difficulty and finally coming to terms. The following day a goat is killed, some of the contents of the stomach are smeared over the chests of those present, and a little of the meat is pounded in a mortar and eaten as a sacred meal to ratify the terms of peace. As they eat the meal, they promise to live at peace, the form of oath taken being "By the dead dog."

Theft. Cattle lifting is the most common form of serious theft. Men seek to steal cattle from members of the same tribe living at a distance from their own district, because the animals stolen can thus be more easily secreted. A man who intends to rob a kraal first visits the place with his son in order to work magic and to make his preparations. He takes with him a number of sticks pointed and prepared for the magic, and indicates certain spots to his son, who drives a stick into the ground at each place. These are magical sticks which cast a spell upon owners of cattle. The magic is followed up at night by the man's going to the kraal, opening the gate and driving away the cattle while the people are sleeping. Should the animals make any noise or prove stubborn and refuse to leave the kraal, it is a sign that the owners have received some intimation of the intended theft and have taken precautions to make more potent magic to frustrate the robbery. Under such circumstances the cattle-lifter beats a hasty retreat before he is discovered and captured, as he knows that he will receive no quarter, but will certainly be put to death.

Chiefs possessing large herds of cattle take the precaution to keep a supply of powerful medicine over the gateway leading into the kraal, and also place it in various parts of the kraal so that, when a thief enters the kraal, he loses his strength, is unable to walk and so is captured and put to death. A successful cattle-lifter soon becomes a noted man

Okech decided to marry the successful but his wife adamantly refused to agree. Okech beat her severely and she ran home to her parents where she remained for several weeks. Her sister, Apolo, continued to live in the village and by now cohabited openly with the husband as if they were man and wife. The wife eventually returned and made an effort to accept the situation as it existed. The husband built Apolo her own house as the second wife (*opachiew*) in the customary place in the homestead, but had not paid bride-wealth. In fact, he had not completed (*rieu*) bride-wealth of the first wife, which added tension to the situation.

All appeared to go well until one night Okech returned from a beer party and abused his wife. What was more serious, he went to the hut of Apolo to sleep although it was the customary period of the month when he should have gone to the house of his first wife.

Early the next morning, the wife visited the mother of my informant and insisted that she accept as a gift her cooking pot and other household utensils. Her excuse was that she had bought new ones. She returned to her house where she packed the utensils and sent Apolo to carry them to my friend's mother. Meanwhile, Okech was sleeping.

She then hanged herself from a rafter in her hut. The noise of her strangulation awakened Okech, who cut the rope and made frantic efforts to revive her with water and to come the body in the customary Luo manner. His wailing brought his brothers and relatives from their homesteads nearby.

When Apolo returned she was confronted by the irate brothers of Okech who accused her of being a witch who had brought *chira* to the village and to the lineage. They beat both Okech and Apolo and drove them from the homestead. The hut in which the woman had hanged herself was then immediately destroyed.

Apolo was not allowed to enter the homestead of her father who, with his sons, drove her from the clan area by thrashing

FL11 Luo FL11

schooling of wives, but modern young women sometimes rebel against this ordered régime, choosing rather to do as they please in their new homes.

Since the introduction of the plough, the part played by men in the cultivation of the fields has greatly increased. Clearing and ploughing are now done by men, but planting and harvesting are still carried on largely by women.

Women's organizations. In the past, women's activities were limited in number. Apart from the communal dancing parties in which they took a great pride, there existed among certain related families councils to settle disputes and misconduct among women. This communal organization has tended to become weaker with the growing family individuality introduced by modern conditions.

While Christian influence has increased their freedom by releasing women from tribal prejudice and by widening the horizon of men's views, pagan women are still hampered from taking an active part in modern economic and social activities.

Women's organizations range from small religious groups to registered co-operative societies. The management of the co-operative societies is largely in the hands of Christian women. They are thus more progressive than their pagan neighbours, although the gap is rapidly narrowing owing to the influence exercised by Christian women upon the other women in the community.

The changing economy. Before the introduction of a money economy, the garden formed the basis of the economic life of women. Their transactions depended on garden produce which they bartered in exchange for live animals. The more industrious and economical thus acquired considerable wealth, supplementing garden

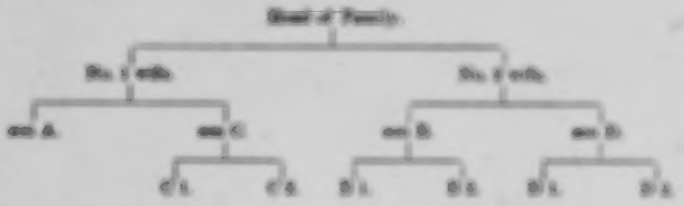
THE LOSS CUSTOM.

In the Rev. Johnston's recent work on the Uganda Protectorate, reference has been made to the presence of a vendetta custom among the Kavirondo, to which, if a man is killed, the men of the deceased endeavour to trust down the murderer, and if they fail, the onus again carry on the feud.

This custom doubtless accounted for much petty bloodshed in times past. I am glad to say, however, that it is dying out now to a great extent, and our murder no longer leads to a succession of crimes.

The old blood feuds are, however, still recognized, and a man may not eat with a person with whom his branch of the family has a blood feud, or, it is believed, he will surely die within 24 hours.

To make it clear how this curse operates, I append an example in which a man kills his brother by a different mother.



The feud commences by A killing B. After this D will not, nor does, eat with A or C. In the next generation B 1, B 2 and D 1, D 2 cannot eat with A or C, neither can they eat with C 1 and C 2, although they are only nephews of the murderer, but they belong to that branch of the family through their common mother.

Curiously enough, although this custom is hinged on the female line, it only applies to the males of the family; the females can eat with the descendants of the injured line without evil effects.

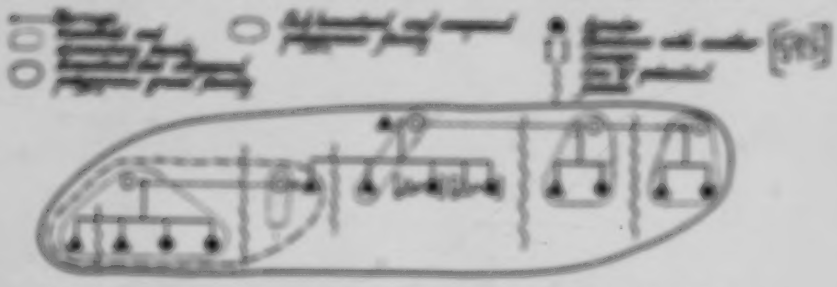
The men are desperately afraid of unconsciously infringing the tabu; if a member of a murderous branch has cooked his food in a certain pot, that pot is forbid for any representative of the other branch; thus when a member of each are travelling together and the cooking pots are few, the situation becomes rather difficult at times and numerous disputes arise. Everything connected with this custom is called "*Isiru*" by the Bantu Kavirondo.

The custom has been adopted in a half-hearted manner by the Nilotic Ja-Luo, but it is not carried out in such a persistent manner, and rarely goes so far as the defilement of the cooking utensils above described.

Among the Bantu people of the Kakamega Tiriki, this *Isiru* custom is often indirectly taken advantage of in rather a cunning way as a means of obtaining revenge for their private grievances. Suppose a murder of a certain clan has

FF: Southall B-6 (1948-1947) 1952 FF3.11 Luo FF3.11

with one maximal lineage, which includes the lineage segments whose territories are marked on the map (Fig. 3) as the locations of Kamchoonyo, Kanjwal, Kakwath, Kanyamwa, Kamago, and Kadero.[1] These lineages all claim patrilineal descent by a recognized genealogy from Awando the wife of Jook, an ancestor from nine to twelve generations of seniors from elders still alive. This is an unusually large exogamous group and has no parallel even among the Luo, with their very wide reckoning of marriage ban. Its present population is about 10,000, including a small percentage of settlers (*jokel*) from other lineages. The ban on intermarriage is still observed throughout this group except for the *jokel*. Its major segments would



probably have separated from one another completely and ceased to claim effective common descent, if it had not been for the machinery of European administration to crystallize the relations of maximal lineages at about the stage they had reached when outside control was first imposed over half a century ago. Since that time the population of the group has probably doubled to much its present size. It is regarded by all the Luo as one of the most important and most authentically Luo groups among them. Since, as the map shows, the territories of its major segments are not contiguous, but form chain segment blocks, their day-to-day activities have become similarly divided; I deal chiefly with the block formed by the locations of Kamchoonyo and Kanjwal, which have a population of 30,000. The lineages of both these locations claim agnatic descent from Kachoonyo, and will be referred to together as Kamchoonyo. (They were, in fact, called East and West Kamchoonyo by the British administration until recently.) Kamchoonyo people can intermarry with the lineages of the surrounding locations—Nyakach, Gem, Kanyada, and Kagan (see map, Fig. 3)—as well as with the groups of *jokel* who have been permitted by them to settle within their territory.[2]

Cases of murder between Kamchoonyo and other lineages would—before the British administration—have constituted blood-feuds between them in which the

[1] Wuoyo is also included, but these people separated from the Luo and were incorporated into the Nyore Kisii.

[2] There are only three considerable groups of Kamchoonyo which are not agnatic descendants of Kachoonyo: Kamadhiang' (Fig. 3), Wagore (Ywai), and Kamwala (Lwo), see Fig. 1. Tradition ascribes for them an descended either from wanderers who became dependants of Kamchoonyo families or from orphan sisters-sons discovered and reared by them. In either case they married Kamchoonyo girls, so it almost inevitable in a system of lineated exogamous lineages. They therefore rank as sister's son's lineages to Kamchoonyo.

19: Southall E.9 (1946–1947) 1952 PZ.11 Lan PZ.11

lineage of the murdered man endeavoured to kill a member of the murderer's lineage in revenge. But the family of the murderer could forestall this process by offering a girl or twelve head of cattle in compensation. If wilful murder occurs between segments within the same maximal lineage, fighting may again occur and a member of the murderer's segment may be killed in revenge. Here it is impossible for a girl of the group to be offered as compensation since she would be of the same maximal lineage and exogamous group as the murdered man, and could not be married by any kinsman of his. But the senior elder recognized by both segments calls a council representative of both, and the murderer, if judged guilty, is supposed to be exiled. Where a man kills a close relative, belonging to his own minimal clan A segment of the maximal lineage, *a yo nuoro—a cruel offence*.[1] The murderer must leave his relatives and stay by the graves until *chulo* (the first mourning period) is finished. He must cohabit with the dead man's wife, if the latter leaves no children to her husband, so that she may bear a child to be named after the dead and to guard his homestead.[2]

The level of groups between which marriage can take place thus corresponds to the level at which general exhortations must be done prescribed between kinsmen, and the groups with which marriage is possible tend to be those between which hostility in the usual attitude. The Luo recognize this correlation, and regard *ode* (in-laws) and *nenge* (enemies) as almost interchangeable terms.

The normal form of marriage is negotiated by go-betweens on behalf of bride and bridegroom with their respective families. A number of cattle has to be made to the bride's family, the normal number being twelve. When the two families are agreed as to the suitability of the match, the groom arranges for a party of his friends to drag the bride from her home. The bride is expected to make a show of resistance and weeping, but it is appointed that the dragging must not take place when the bride's parents are absent from the homestead. After the bride is thus brought to the *simbo* of the groom, she is better delivered her in the presence of married men and women witnesses; the relatives of her virginity are placed on pinnacles and paraded in triumph to the bride's home the next day and a feast is held there. If the bride fails to prove her virginity in this way no feast is held, and one head of cattle less is paid to her family. The legal commencement of a marriage is said to be the groom's smoking of *rook kwa* (the "kindler of the stick"), which goes to the bride's mother, and a bull to her father. These customs the main payments, varying according to the wealth of the two parties and to other general level of Luo wealth in cattle at the time, but usually eight upwards. After this bride and groom live together for some time in the latter's *simbo*, and then the bride gets permission to return to her own home. The groom goes there with a heifer and a bull, and the feast of *Asawo* is held. This completes the customary twelve cattle of the bridewealth. Bride and groom then return

[1] Some mention of sexual sins would be required to discover how far the level of / segment within which murder is viewed in this way coincides with that within which widows of kinsmen may be inherited and customary gives to marriage payments. My own was not direct for the collection of such statistics, but my impression was rather such a coincidence in very vague, and it is certainly by non-consciously present in the minds of the Luo.

[2] Cf. Evans-Pritchard, *Some Aspects of Marriage and the Family among the Nuer*, pp. 3–10. Despite its importance among the Nuer, the obligation of *ghost marriage* is far from universal among Nilotic peoples. Among the Luo-speaking groups it is not practised by the Kenya Luo nor by the Alur nor, probably, the Acholi.

19:Wilson E-9 (ca. 1950) 1960
FL11 Luo FL11

183 goals which have been carefully weighed and assessed as to the possible supernatural and social consequences. The Joluo believe that a goal does not justify the means if the means require violence, unless all methods of arbitration, conciliation, appeal to authority, both temporal and supernatural, have been tried and proved to be unsuccessful or inadequate.

783 Violence requires cleansing—physical and spiritual cleans-
683 ing of the most exacting nature—to avoid the supernatural consequences (*chiru*) which violence may bring in its wake. One case has been recorded which contains an excellent description of the ceremonial and ritual cleansing thought to be essential after a murder. This particular murder was planned and executed by a group which, after years of thought and effort to resolve the conflict without violence, finally resorted [771] to murder. Obviously, with the coming of the European, other [394] factors were involved to escape detection for an act which [628] in the old days would have given the group high status within its own community and which would have created feuds or precipitated a war that ultimately would have been resolved by blood compensation or schism of the political unit and migration by the weakest group.

Violence which arises immediately and unpremeditatively from quarrels, drinking, infidelity, sex, marital tensions, or family differences, and which results in a death, is not regarded in the same way as predetermined action decided upon as a last resort. Ceremonial cleansing is still necessary but does not take the extreme form because these acts are regarded by the Luo as bringing consequences which affect the individual only, that is *kuer*, and not *chiru*, which affects the group, clan, or tribe as a whole. Fortunately British law makes a similar dis-
683 tinction: that between murder and manslaughter. It will be
673 found therefore that the majority of cases involving Joluo which have come before the courts of Kenya as murder cases are resolved and punished as cases of manslaughter. The Joluo do not, however, understand why many of those convicted un-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

for the land of manslaughter should be punished at all. They feel that a person who makes the mistake of killing in anger is or has been or will eventually be punished by the ancestors, God, the elements, by illness, bad luck, misfortune, or the like, in the inevitable nature of things.

It is believed that cold-blooded, premeditated murder brings chaos to the group and is therefore punished by the tribe or by the segment affected. The group or the individual who took what they regarded as this calculated risk was eventually banished from the tribe or if large and strong enough to dominate the political unit to which the deceased belonged could force his supporters, usually his segment of the clan, to break away and leave the area. Luo kinship describes all members of the clan in the same genealogical generation as brothers, fratricide, therefore, has a very wide range.

Luo clans occupy and are identified with a geographical area. The clan and the area it occupies are usually called after the eponym of the tribe. Those living within a clan or tribal area who are not members of the clan or tribe are regarded as squatters (*jodak*) with limited rights. They may be unrelated squatters, but most often are found to be affines of legitimate clan members. Murder committed by such persons invokes immediate counteraction on the part of those who belong to the land by virtue of descent, *jogwong*. Cattle could be taken by force, the culprit banished or killed, and/or a woman from that group married by a member of the dead man's minimal lineage, his *jokakwaro*, to raise seed unto the dead man's name. This woman would be regarded as the wife of the dead man, her children would placate his ghost as father (*wuoro*), the physical father would merely serve as genitor.

One major clan, *Kakia*, of a powerful tribe, the Seme of Central Nyanza, descended from a woman of this type—but then not exactly of this type: what happened was as follows. A *jodak*, living in the clan area of Seme, killed the son of an important elder of the tribe. He fled to his own tribal land to

19:Wilson E-5 (ca. 1950) 1960
FL:11 Loo FL:11

avoid the immediate consequences and as a result war broke out between the people of Sowa and the people of his tribe, Ugwuyo. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It is, to my knowledge, the only clan in Loo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Johuo attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Johuo had developed several devices to deal with cases of homicide. A wife could be married in the name of a murdered youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was deflowered by a stranger (*jokuoiny*)

19:Wilson E-5 (ca. 1950) 1960
FL11 Loo FL11

which is the infidelity of the spouse of the deceased, in the case of a child, by the adultery of its mother. Ritual cleansing of the members of the minor lineage is therefore necessary, as for incest.

I mentioned above a classical case of homicide which illustrates what the Jukun regard as a calculated risk of the consequences. It deserves fuller analysis.

Case No. 1.

This case involved a group of nine related men. Only one of them was convicted, and he eventually was acquitted on appeal through lack of corroborative evidence.

A quarrel began between members of two major clans of the same tribe over the appointment of an assistant chief. The clan from which the assistant chief was appointed—we shall call it Jokuth—is alleged to have taken advantage of the clan—which we shall call Jokuch—which was unsuccessful. The clans feuded in every way, over land, cattle grazing and so on, until the elders of Jokuch decided, as a warning in the ancestral way, that they should burn the hut of a leading elder of Jokuth. This was done. The assistant chief arrested a member of clan Jokuch, a person with whom he is alleged to have had a personal grievance, and this man was convicted of the burning and sentenced to a term of imprisonment. His sons fought hard and long to have him released on grounds of ill health and, when finally successful, took him home only to have him die shortly after. On his death bed, he made his sons swear to avenge his death.

Diviners and medicine men were consulted, and many methods were tried unsuccessfully for several years to bring clan Jokuth to its knees and to bring about the death of the assistant chief who had by now retired.

All was not well with the affairs of Jokuch clan. Each new catastrophe was taken as evidence of the malevolence of the ghost of the deceased because his death remained unavenged.

19:Wilson K-9 (ca. 1950) 1960
FL:11 Lee FL:11

Finally, in desperation, his sons and a group of his *pikakuoro* assembled the local division, *pikilo*, to choose an auspicious day for the killing of the ex-chief and to collect the animals and materials necessary for cleansing after the deed had been accomplished.

The ex-chief was found and stabbed to death at the place named by the *pikilo* and his body was hidden in a nearby river. It was found several days later, and a witness was found who alleged that he came upon the group on the day of the murder in the act of disposing of the body.

Those who had had actual physical contact with the blood of the murdered man were cleansed as soon as they arrived home by the leading *pikilo* of the clan. He used a grey ash from burning the sacred *boandwar* vine. The minimal lineage, *pikakuoro*, assembled at the village of the senior son, who was the head of the lineage segment, and who had struck the fatal blow. There the following cleansing ritual was performed: at about two o'clock the following afternoon, a black sheep and red chicken were slaughtered by the head of the lineage. The sheep and chicken were first prepared by the *pikilo*, who placed his medicines in the mouth of the sheep and of the chicken before the sacrifice. The *pikilo* cut strips of skin from the animal and wrapped them around the spear and knives used in the murder. The spear had to be destroyed at sundown because the victim was related to the spear clan of the tribe. The meat was divided on the lineage principle and consumed ceremonially. The meat of the chicken was eaten only by those who actually struck blows.

The purpose of these sacrifices was stated by the *pikilo* to "keep the spirit of the murdered man from doing evil to the clan." It also cleansed the bodies of those who drew blood so that they could now eat with their families and once more participate in the activities of the village and clan.

After the meat was eaten, those present held a meeting to decide which old woman should act as a wife to the ghost of

19:Wilson E-5 (ca. 1950) 1960
FL11 Lee FL11

ignorant of the previous night's events, notified the police. Thus the story was out.

The Joluo were concerned that the youth should have been arrested and charged with murder. He was acquitted after trial on the grounds of self-defense, but the opinion remained that he should have had praise and not have suffered the indignity of being held in custody which, to the unsophisticated, was punishment and prison.

The Joluo discipline wives and children, when it is thought necessary, by beating and kicking. One or two cases each year come to the courts as a result of excessive force resulting in the death of a victim of discipline. Out of 46 cases between 1949 and 1954, 10 were of this type.

The largest number of murder cases today arises from drunken quarrels during beer parties. Native beer does not have a high alcoholic content, but a beer-drink often begins at mid-morning and continues well into the night and, on special occasions, until the next day. The quantity consumed therefore frequently produces an acute state of drunkenness. Of the 46 cases, no fewer than 12 can be classified as the result of excessive beer drinking. These cases, without exception, were finally treated by the courts as manslaughter.

Family quarrels, often over bride-wealth payments, account for a few cases every year. A typical case of this type is as follows.

Case No. 3.

In 1949, the Accused caught his wife in the act of adultery with an acquaintance. The wife returned to her father's village, as is the custom in such cases, and made several efforts to elope with her lover. On each occasion, her brothers forcefully restrained her and threatened her lover with a severe beating or death, should he attempt to elope with their sister. After several weeks of argument and numerous meetings of the eld-

19.Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 ers of the clans involved in the case, the husband went to the
• 628 village of his wife and took ten head of cattle by force from
684 her father's herd. This action is approved in customary law after the elders have met and discussed the matter and are unable to resolve it by any other method.

Naturally the brothers of the girl were extremely angry that their sister should have behaved in this way that meant the loss of animals which they, no doubt, had planned to use for their own bride-wealth. The girl remained unrepentant and troublesome. She stated that she was determined to return to her former husband's village to collect her clothes, and that she would leave her brothers and her former husband in order to join her lover. Her brothers followed her to the village of her former husband and there began to quarrel. Her former husband joined the group, and the three decided to teach this woman a lesson. They beat her with sticks until she was dead.

[682] The court took a lenient view and decided that their intention was not to kill the woman but merely to discipline her, and each of the Accused was sentenced to six months hard labor for manslaughter.

The next case also arose out of bride-wealth.

Case No. 4.

159 In 1949, a woman left her husband to live with her lover.
684 Her husband tried through indigenous and legal channels to
583 get his bride-wealth returned. The woman's father, however, had used the animals and could not return them, although he was sympathetic. The husband, therefore, was left with only one course, to demand the return of his wife. To this end, he went to the village of her lover and threatened him. They began to quarrel and to fight. Each was armed, the lover with a spear and the Accused, the husband, with a panga and a knife. The lover was killed and the husband charged with murder.

159 In this case, the court decided that this was manslaughter,
682

economic activities and although, formerly, there were organised hunts, today hunting is not much practised. 105

LUO EXPANSION

Until the time of European intervention the Luo appear to have been gradually expanding towards the south. This resulted in their division into two parts (on the north and south of the Kavirondo Gulf) namely: the Luo of Central Kavirondo and the Luo of Southern Kavirondo. Evans-Pritchard writes, "The southwards migration seems to have been across the Gulf from Uyoma and Asembo to Karacuonyo, and not round it, and to have taken place over several generations, commencing, if genealogies are to be trusted, about seven generations ago. Across the Gulf the Luo came up against the Bantu (Kwa) and Nilo-Hamitic (Langu) tribes."(1) The assimilation and absorption of these tribes was incomplete at the time of European occupation of the country. During this process of expansion there was a considerable dispersal of lineages so that lineages of the same clan are found in both Central and South Kavirondo. The Luo tribes least influenced by the Bantu are the Uyoma, Seme and Asembo and such tribes as pushed the southernmost Luo into Bantu country. 174

SOCIAL ORGANISATION AND POLITICAL STRUCTURE

At the present time Luoland is divided into a number of administrative locations which vary considerably in area and population. These locations, according to Evans-Pritchard, correspond approximately to the old tribal areas of the Luo. The expansion of the Luo has divided them into two main groups with Kisumu location forming a narrow territorial link between them: 631 101

1. The Luo of Central Kavirondo, known as *Joiye* (the inside people).

2. The Luo of Southern Kavirondo, known as *Jooko* (the outside people).(2)

THE TRIBE *(Piny)*

Among the Luo the tribe is an autonomous political unit. Like the Nuer tribes it may be defined in terms of the way in which homicide was formerly regarded and treated. 619 682

Compensation for homicide *(cut)* takes the form of handing over cattle, or a girl, to the kinsmen of a slain man so that heirs may be raised for him. Compensation is only paid for the killing of a tribesman, for men of other tribes, slain in war, raids or private conflict, are regarded as *wasigu*, enemies. On the other hand, compensation is not paid for killing a clansman, for such a deed is regarded as a sin, and propitiation and atonement have to be made by the sacrifice of an ox provided by the inne-

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1949, No.VII, p.2.
(2) *Ibid.*

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

many cattle, sheep, and goats and most of their country is suitable for a pastoral life. Fishing plays a big part in the economy of the lakeside tribes. Hunting is little practised to-day, but in the old days organized battues were a regular feature.

The homestead, the residence of an elementary family or joint family, is generally called *dala*, a Bantu word, but in the more purely Luo parts of the country the Nilotic word *pacho* (pl. *mier*) is used, especially by the older men. It is usually surrounded by a thick hedge of euphorbia, a narrow gap in which is the entrance to the kraal, round which are the huts and granaries. Nothing is said about the domestic life of such homesteads nor of kinship life in this article, for its purpose is to outline the nature of the larger structural groups.

2

At the present time Luoland is divided into a number of administrative locations. These locations, shown on the map, vary considerably in size of area and population. According to official returns most have populations of under 20,000 and the only two with populations of over 30,000 are Alego (53,604 with density of 244 to the square mile) and Samia (41,011 with density of 193). Density of population is greatest in some of the fertile northerly locations : North Ugenya (29,363 with density of 515), South Ugenya (7,497 with density of 341), and North Gem (29,014 with density of 387). It is lowest in some of the lakeside locations in South Kavirondo : Kasingiri (1,904 with density of 12), Kasigunga (2,041 with density of 21), and Gwasi (4,934 with density of 42).

These locations correspond approximately with the old tribal areas of the Luo. The main differences are that in South Kavirondo Karacuonyo location (28,207 with density of 167), Mumbo location (26,465 with density of 174), and Kabondo location (7,926 with density of 126) comprised a single tribe, as did North Gem and South Gem (19,442 with density of 237), North Ugenya and South Ugenya, and West Kano (28,617 with density of 265) and East Kano (25,730 with density of 158).

It is beyond question that the whole of Luoland was once occupied by Bantu and Nilo-Hamitic tribes and that the pressure which has continued, particularly against the Bantu, on the confines of Luoland to the north, east, and south, almost up to the present day is the end of a gradual process of expansion and assimilation. The Luo have been greatly influenced by Bantu culture during its development.

The expansion of the Luo towards the south has resulted in their division into two parts between which Kisumu location forms a narrow bridge, the Luo of Central Kavirondo, the *Joiye*, the 'Inside People', and the Luo of South Kavirondo, the *Jooko*, the 'Outside People'. The southwards migration seems to have been across the gulf from Uyoma and Asembo to Karacuonyo, and not round it and to have taken place over several generations, commencing, if the genealogies are to be trusted about seven generations ago. Across the gulf the Luo came up against Bantu (*Mwa*) and Nilo-Hamitic (*Langu*) tribes. The conquest and cultural

the divergences are glossed over and the relations of segments treated in the same kinship idiom as if the implied regularities had been maintained.

I now proceed to the more detailed description of those features of the Luo family which aid in the interpretation of the lineage system. The lineage concepts of the

FIG. 3

Luo are then discussed, and six cardinal principles abstracted from them. Some statistics are given to show the divergence of lineage activities from the norms implied in the concepts and from the genealogical structure itself. More details are given of the nature of segmentary activity within the extended family, between the extended families of whose members the smaller lineage segments are composed, and between the larger lineages. Lastly, an interpretation is given of the transformation of class B into class A segments as small landholding lineages, from which

HOMICIDE AND SUICIDE AMONG THE JOLUO OF KENYA

G. M. WILSON

101 THE Luo ("Jaluo," singular; "Joluo," plural) are unique in that they are the only Nilotic speaking people in Kenya. Their place of origin is the Nile Valley; through the centuries by gradual expansion by war and peaceful penetration, they migrated up the Nile Valley, through Uganda, into Kenya, along the shores of Lake Victoria. The term Luo means "swamp" and Joluo "the people of the swamp." Through their migrations they have left behind other Nilotic groups in Uganda and in the Sudan.

131 The Joluo are chiefly concentrated in Central Nyanza where over half a million of them are found today. There are, however, Luo pockets in North Nyanza and also in South Nyanza.

● 631 The Luo of Central Nyanza are divided into twelve tribal groups. Each tribal group, with a Government-appointed chief, today forms an administrative unit, a "Location," within the District of Central Nyanza. These administrative units, laid down in the early twenties, coincide fairly accurately with the former tribal boundaries and are accepted by the people.

614 Each Luo tribe can be described as a society of agnatic parallel lineages or clans, each tracing either real or mythical descent from a common eponym or descent through an adopted or affiliated family to the eponym.

614 178 [797] The original form of the clan and lineage structure remains today in comparative purity. The Joluo people—although on the surface they have accepted Christianity—still retain the ceremonial, religious, and ritual aspects of their culture to a very large degree.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

towards marriage, that anyone who touches this tassel has to pay a fine of three goats to the husband.

The women do not wear iron wire to the same extent as their husbands and brothers. These may frequently be seen with from six to ten pieces wound round their arms and legs, which shine from constant rubbing and polishing with oil and fat. Happily there are signs that this wire is going out of fashion, whereby they will be spared the sores and ulcers which are its continual accompaniment. Trade generally will thus be put upon a sound cash basis instead of resting as it has done upon a precarious footing of barter. The Jaluo, who are keen traders, have begun to realise the advantages of the rupee over the iron, being helped to this conclusion by the necessity of having to pay three rupees a year for every hut.

The Jaluo full dress is very striking. A huge hat of monkey or goat skin, or of feathers, often of ostrich, surmounts a well-oiled visage which is ornamented by lines of small white beads across the forehead, nose, upper lip and chin and fastened behind the ear. Round the neck are strings of beads, brass cartridge cases, fetishes, and a round or two of iron wire. Across the chest and sometimes down the back are rows of cowries sewn on to strips of leather; and over the right shoulder hangs a big black feather boa, or an ornament made of the long hair from the wildebeest's tail. The everyday goat skin is discarded. Round the waist they fasten strings of iron beads which they manufacture from iron wire; the iron has an extra polish, and from it depend bunches of feathers. The body is well oiled and sometimes covered with red clay or charcoal. Finally they fasten to the knee and ankle small bells made of iron wire in the shape of broad-bean pods and with one or two small iron beads inside.

Their weapons consist of a spear with a long haft and a short blade, a Masai sword on the right hip and occasionally a bow and arrows instead of the spear. Their shields are very large and heavy, made of buffalo hide and of a peculiar shape; vertically they are about three feet six inches in height; horizontally nearly six feet in length and curved back so that the left side, back and front of the warrior are covered; they are painted red, white and black, often in artistic designs. These designs probably at one time indicated to what family the owner belonged; to-day, however, this idea, if it ever existed, seems to have quite disappeared, each man painting on his shield the pattern which pleases him most. Further investigation on this subject should be made in order to make certain whether the patterns have any peculiar meaning.

Some wear the hair long, twisting it into long thin strings and dressing it with oil and red clay or charcoal. Others partially shave the head, always leaving at least one little tuft, which is cut off and worn by the chief mourner at the owner's funeral. Sometimes the body is striped or spotted with yellow clay in imitation of the zebra or leopard.

Politically the Jaluo are in a semi-feudal state; the tribe is divided up into larger or smaller chieftaincies or clans, which correspond to the old baronies, but there is no one overlord to make the resemblance complete. Nominally the chiefs

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

642 643 have absolute power, but in reality their influence is not great. Each chief subdivides his territory, placing each portion under a sub-chief. These sub-chiefs or headmen are supposed to attend frequently at the chief's village in order to hear and carry out his orders. If a crisis arises, an informal council of the heads of the village is called and the *patres familiarum* can express their views, though the decision rests with the chief. There is no kind of voting. This council will also assemble if the rule of the chief becomes intolerable. They may threaten to secede, but their resistance is always passive; the usual result, however, is that one or more of the headmen set up as chiefs on their own account, and quietly [423] disregard the orders of their *quondam* superior. Land is held in common by the members of each clan, but jealously guarded from subjects of all other chiefs. A [166] man may, and frequently does, move from one clan to another, but in that case he has to obey the orders of the chief to whose clan he has attached himself. There are no formalities attendant on such a change.

578 Trespass by the members of one chieftaincy upon the land of another is indeed the usual cause of the frequent small quarrels which arise and very often lead to bloodshed.

423 621 [177] Internally, however, private ownership of land has to some extent made its appearance. The Jaluo village represents a family, the headman being the father or (if he be dead) the eldest brother. Besides his family he will, if he is a chief, or sub-chief, generally shelter one or two retainers whom he calls his *askari*,[1] police. When the time comes for laying out the *Shamba*[1] or agricultural land, each adult male and female marks out and tills his own piece, the married women being helped by their daughters and younger sons; although the family in practice share the produce, theoretically the crop from each plot belongs to the member who tilled it; thus, if one of the sons wishes to sell some grain he can only sell what he has grown himself, and, similarly, one *askari* reaping what another has sown would be considered a thief.

685 423 Cases occasionally arise which illustrate this: if A's cattle or goats wander into B's *shamba*, though A and B live in one village, B claims compensation. Private tenure is, however, only temporary. If a village uses a certain piece of land for a year and then leaves it, another village may cultivate there; but as the *shambas* are usually close to the villages, and villages are separated by some little distance, such cases of appropriation are practically unknown. The rights, however, to a certain piece of land are only squatter's rights and confer no claim *in perpetuo*.

361 [343] In shape the Jaluo village is circular and is fenced round with euphorbia bush, stone or mud walls, or watling, as may be most convenient. In the centre is the cattle pen; around this are the store houses of basket or wicker work; they are raised some two feet from the ground and are about five feet high and three feet in diameter; there is a small opening near the top sufficient to

Government.

643 **Chiefs as rulers.** There is no king of the country, nor is there any single paramount chief; the Bantu chiefs claim equal, if not superior, rights to the land. Certain chiefs rule over extensive districts inhabited by the Nilotics, and their rights as leaders are considered to be hereditary; they are also looked to in cases requiring settlement or legislation.

423 **Land tenure.** Land which has not been cultivated in the past may be tilled by any family; but, when once it has been tilled, the community regard it as the property of the family whose ancestor first cultivated it. Should it be left fallow for a number of years, no other family may appropriate and till it without first obtaining the original owner's permission. Few people seek such permission, preferring to dig virgin-land which will afterwards belong to their children.

621 **Local chiefs as the magistrates.** The people live in communities. They build their houses in close proximity and in most cases surround them with a growing fence, leaving a gateway which can be closed during the night or in times of
622 danger. Such a village group is ruled by a sub-chief who is under the authority of the district-chief. The chief of a village is magistrate and controls the general affairs of his people. This chief levies no taxes, but his people make him presents of goats and sheep, and of grain also at harvest time.

692 **Courts and court fees.** Any person wishing to bring a charge against another for any offence, real or imaginary,
694 pays a small fee to the chief of the village before whom he lays
695 his complaint or accusation. The chief or elder then summons the accused person and appoints a time when the case shall be heard. The chief sits with one or two village elders and gives his judgment. A person may appeal from a village chief to the principal chief in the district, and the elder who first tried the case will then go to the superior chief to be present when the case is reheard. The parties appealing have
681 to pay fresh court-fees before the case is retried. The punishment in almost every case is a fine and the amount is determined by the gravity of the case. The losing party has to

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

towards marriage, that anyone who touches this tassel has to pay a fine of three goats to the husband.

The women do not wear iron wire to the same extent as their husbands and brothers. These may frequently be seen with from six to ten pieces wound round their arms and legs, which shine from constant rubbing and polishing with oil and fat. Happily there are signs that this wire is going out of fashion, whereby they will be spared the sores and ulcers which are its continual accompaniment. Trade generally will thus be put upon a sound cash basis instead of resting as it has done upon a precarious footing of barter. The Jaluo, who are keen traders, have begun to realise the advantages of the rupee over the iron, being helped to this conclusion by the necessity of having to pay three rupees a year for every hut.

The Jaluo full dress is very striking. A huge hat of monkey or goat skin, or of feathers, often of ostrich, surmounts a well-oiled visage which is ornamented by lines of small white beads across the forehead, nose, upper lip and chin and fastened behind the ear. Round the neck are strings of beads, brass cartridge cases, fetishes, and a round or two of iron wire. Across the chest and sometimes down the back are rows of cowries sewn on to strips of leather; and over the right shoulder hangs a big black feather boa, or an ornament made of the long hair from the wildebeest's tail. The everyday goat skin is discarded. Round the waist they fasten strings of iron beads which they manufacture from iron wire; the iron has an extra polish, and from it depend bunches of feathers. The body is well oiled and sometimes covered with red clay or charcoal. Finally they fasten to the knee and ankle small bells made of iron wire in the shape of broad-bean pods and with one or two small iron beads inside.

Their weapons consist of a spear with a long haft and a short blade, a Masai sword on the right hip and occasionally a bow and arrows instead of the spear. Their shields are very large and heavy, made of buffalo hide and of a peculiar shape; vertically they are about three feet six inches in height; horizontally nearly six feet in length and curved back so that the left side, back and front of the warrior are covered; they are painted red, white and black, often in artistic designs. These designs probably at one time indicated to what family the owner belonged; to-day, however, this idea, if it ever existed, seems to have quite disappeared, each man painting on his shield the pattern which pleases him most. Further investigation on this subject should be made in order to make certain whether the patterns have any peculiar meaning.

Some wear the hair long, twisting it into long thin strings and dressing it with oil and red clay or charcoal. Others partially shave the head, always leaving at least one little tuft, which is cut off and worn by the chief mourner at the owner's funeral. Sometimes the body is striped or spotted with yellow clay in imitation of the zebra or leopard.

Politically the Jaluo are in a semi-feudal state; the tribe is divided up into larger or smaller chieftaincies or clans, which correspond to the old baronies, but there is no one overlord to make the resemblance complete. Nominally the chiefs

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

have absolute power, but in reality their influence is not great. Each chief subdivides his territory, placing each portion under a sub-chief. These sub-chiefs or headmen are supposed to attend frequently at the chief's village in order to hear and carry out his orders. If a crisis arises, an informal council of the heads of the village is called and the *patres familiarum* can express their views, though the decision rests with the chief. There is no kind of voting. This council will also assemble if the rule of the chief becomes intolerable. They may threaten to secede, but their resistance is always passive; the usual result, however, is that one or more of the headmen set up as chiefs on their own account, and quietly disregard the orders of their *quondam* superior. Land is held in common by the members of each clan, but jealously guarded from subjects of all other chiefs. A man may, and frequently does, move from one clan to another, but in that case he has to obey the orders of the chief to whose clan he has attached himself. There are no formalities attendant on such a change.

Trespass by the members of one chieftaincy upon the land of another is indeed the usual cause of the frequent small quarrels which arise and very often lead to bloodshed.

Internally, however, private ownership of land has to some extent made its appearance. The Jaluo village represents a family, the headman being the father or (if he be dead) the eldest brother. Besides his family he will, if he is a chief, or sub-chief, generally shelter one or two retainers whom he calls his *askari*,[1] police. When the time comes for laying out the *Shamba*[1] or agricultural land, each adult male and female marks out and tills his own piece, the married women being helped by their daughters and younger sons; although the family in practice share the produce, theoretically the crop from each plot belongs to the member who tilled it; thus, if one of the sons wishes to sell some grain he can only sell what he has grown himself, and, similarly, one *askari* reaping what another has sown would be considered a thief.

Cases occasionally arise which illustrate this: if A's cattle or goats wander into B's *shamba*, though A and B live in one village, B claims compensation. Private tenure is, however, only temporary. If a village uses a certain piece of land for a year and then leaves it, another village may cultivate there; but as the *shambas* are usually close to the villages, and villages are separated by some little distance, such cases of appropriation are practically unknown. The rights, however, to a certain piece of land are only squatter's rights and confer no claim *in perpetuo*.

In shape the Jaluo village is circular and is fenced round with euphorbia bush, stone or mud walls, or watling, as may be most convenient. In the centre is the cattle pen; around this are the store houses of basket or wicker work; they are raised some two feet from the ground and are about five feet high and three feet in diameter; there is a small opening near the top sufficient to

[1] Swahili word adopted.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

allow a man's head and shoulders to enter; the roof is of grass. Outside these again is the circle of huts, strongly built of sticks and grass and with the sides plastered with a mixture of dung and mud. Each married male in the village has his own hut, and besides this a hut for each wife and two smaller huts, one for his sons and another for his daughters, which latter live with an old woman, often their grandmother. The two sexes are kept rigidly apart, and though, as will be seen, the Jaluo notion of morality is scarcely the same as the European, there is little of the promiscuity of intercourse among the Kavirondo which is so noticeable a feature among the other Nilotic tribes of British East Africa.

As the sons grow up they marry and build houses in the father's village for themselves and their wives. The eldest son usually remains with his father for good and all, but as the other sons in turn become fathers of families, they often build villages for themselves near the paternal village; as often as not, however, the sons keep together after the father's death, the eldest becoming the head of the family.

There is a strict law of exogamy among the Jaluo, though a son may marry his father's wife if she is no blood relation of his; similarly two sisters are often simultaneously the wives of one man.

Their rule of inheritance, though apparently complicated, is really simple. The husband sets aside so many of his cattle to provide food for each wife, the chief or first wife naturally having a larger share than the rest. On his death the wife and the cattle set aside for her pass to her sons, her eldest son as the new *pater familias* again getting the larger share. If a man has no sons by the first wife but sons by another, all the property, including the first wife and her daughters, pass to these sons; if a man has no sons, all his property passes to his brother or nearest male blood relation; females can own no property, being themselves but chattels. On the death of a chief his power descends upon the eldest son of his first wife, even though his second or third wife may have borne him a son before the son by the first wife was born; *i.e.*, A is his first and chief wife and E his second. A may bear him two daughters, B and C, and then a son D. Though in the meanwhile E has borne him a son F, D will become chief in virtue of his mother's priority, even though he has an elder brother (F). But if D is not of fit age to govern, F may become chief, as a regency is too advanced an institution; and similarly if both D and F are infants, some elder blood relation, such as their eldest uncle, will succeed their father. This rule not unnaturally leads to much quarrelling, as, when the dispossessed heir grows up he often lays claim to rule, with disastrous results.

A great many formalities attend a Kavirondo marriage. As has been remarked above, exogamy is the strict rule. The young man having declared his choice to his father, the latter goes off to the girl's father and arranges the dowry. He then returns, and the intending bridegroom goes over with a bull or some goats as earnest money and partakes of the preliminary feast, an essential feature of this being an offering set aside for the sun-god, consisting of a little meat, part of a

CHAPTER 6

The Reluctant Luo

I

THE Luo are the second largest tribe in Kenya, coming next to the Kikuyu, and at the moment the most influential politically. This is because most Kikuyu politicians went into detention camps at the time of Mau Mau. While Kikuyu cats were away, Luo mice played vigorously, and grabbed the best political cheese. Speaking generally, the Luo are hefty, black-skinned, somewhat ox-like people with prominent teeth, a reputation for making good labourers and a rather slow-witted approach to life.

Needless to say, there are plenty of exceptions. Mr. Tom Mboya is a Luo and, while he has been called many things, 'slow-witted' has never been among them. Their natural food is fish and they are not by nature a cattle people. Their sturdy women smoke pipes with long clay stems. The Luo are not Bantu but Nilotic and their affinities, lingual and tribal, lie more with people in Uganda, such as the Acholi, than with any other Kenya tribes. They are surrounded, however, by Bantu peoples, with whom they share the wide, fertile, steamy and mainly flat basin that surrounds Lake Victoria. Around this basin lie hills from which warrior tribes look down on them, formerly as an eagle looked upon its prey. Far to the south lie the plains of Masai.

People who have dealt with other tribes find the Luo difficult. Their obstinacy is legendary, they are inclined to be sullen and suspicious. The Kikuyu can be all these things, but they are nimble-minded, subtle and, for those they like, have charm. Luo people can be brave and loyal but charm is rarely among their attributes. They are faintly Teutonic, in an African fashion.

So it is not surprising that of all the major Kenya peoples, leaving aside the Masai, the Luo have put up the stiffest

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

resistance to the forward march of Progress in the agricultural field. No spontaneous wish for any branch of Progress except the political seems to have gripped the collective Luo mind. Here, on these hot and apathetic lakeland flats, all the impetus has come from Europeans.

It might be argued that the Government has no call to make people change their ways against their will. This indeed is an argument much used by Luo politicians. It is an old story: should nanny sit by and watch Master Robert break up his toys—in this case, ruin the soil, create acute erosion, turn the whole of Nyanza province, which contains one-third of Kenya's population, into a great rural slum?

Beyond question, that was going on. In Nyanza province there are over two million cattle, about one to every two acres. It would be a job to support this rate of stocking on the finest pastures under skilled management; here it is utterly impossible. The cattle have become so small and shrivelled that they are really not much larger than Great Danes, but their sharp hoofs can still make and deepen gullies as they track a way to springs. During the last three years, the output of crops in the province has halved, because yields have dropped so sharply. Yet there are more and more mouths to feed.

All the evils of land abuse were here displayed in concentrated form. No manure, no rotations, no resting land under grass; maize or cotton again and again, planted too late and in the wrong manner; no trees, communal grazing destroyed by useless skinny little beasts. It was not for want of trying by the technical staff. For years they had been urging, persuading, bullying, demonstrating, and they had scarcely dented Luo indifference and complacency. Famine was beginning to threaten these overcrowded areas—for the one thing the people continued to produce more and more of was their own kind.

II

And so the Government decided that the only salvation for the Luo lay in dividing their communally owned land into individual holdings. Land consolidation—the first stage

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

towards enclosure—was proclaimed as the official policy and, in 1958, an area called Nyabondo picked out for an experiment. The edict went forth that everyone must define his holdings, mark them out and do, in fact, as the Kikuyu were doing with such success, not to mention the Nandi and Kipsigis and many others.

On the heels of the agricolas with propaganda, local politicians moved in to tell the people it was all a trick to steal their land. Whether or no everyone believed this, no one dared to quarrel openly with the politicians, and not a single land-holder obeyed the Government.

'On 30th December, I called a meeting and closed the whole thing down,' Mr. Peter MacEntee, the D.C., told me. 'All right, I said, if you don't like it you needn't have it; ruin your land if you want to, as much as you like; what do we care? It's your funeral. Go ahead, and good luck to you. The agricolas will leave you alone from now on, the instructors are pulling out to places where people want them; we understand now that this sort of thing is *far* too advanced for you. Keep up the bad work, and good-bye.'

Mr. MacEntee had evidently enjoyed this. In time the Luo, when in their mule-like frame of mind, subdue the greatest enthusiasts. But there was a sequel.

'Three weeks later, half a dozen men from Nyabondo turned up in my office. They had a little plan, with some *shamba* boundaries marked on it. "We have decided to consolidate," they said. "Here are the boundaries of the first *shambas* we've completed. We've marked out each man's fragments and exchanged them as you said. Now we want to lay them out on proper lines. Please send us an instructor and a European."

'This was the first deputation. Others followed. Now the whole of Nyabondo is completed—the first in central Nyanza. We know what to do now. Use the couldn't-care-less technique.'

Another example: on the Kano plains, where rice grows under irrigation, until this year the agricultural department has looked after the bunds. They had endless trouble—arguments, sullen silences, even sabotage. They got the output up to 30,000 bags and there it stuck. Then they withdrew,

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

telling the rice-growers they must make and maintain their own bunds. Last season the output jumped to 50,000 bags.

III

We drove to Nyabondo across the Kano plains. No one loves these plains. They are not only flat, they are absolutely treeless, dry, cracked, windswept, overcrowded, dusty and mean. The soil is 'black cotton', an especially viscous clay in which any vehicle bogs down irrevocably in wet weather—very fertile potentially, but soul-destroying to work. 'The people are like their soil,' I was told. 'They break your heart and yet you go on trying, something's there.'

Everywhere are circles of a particular euphorbia, a dark-green, harsh, ugly plant that grows about eight feet tall and surrounds every group of huts. When a family head dies, his homestead is evacuated, his huts are left to rot away and only the euphorbia hedge remains, so the plains are covered with old circles as well as those in use. People have tried planting eucalyptus trees, but white ants eat them before they are man-high.

No individual cultivates his land in one piece. He digs or ploughs a patch here, a patch there, another bit over there, two more bits down the hill and a piece two miles off across the valley that belonged to his mother's uncle. This is known as fragmentation; it is almost universal among Bantu people, exists also among others such as the Luo, and is like a net spread for the feet of Progress in which he becomes enmeshed and stultified.

The first stage of land enclosure must be for every cultivator to exchange fragments with his neighbours, so that all his land is gathered together in one piece. It is the first stage and also the hardest; land is life's blood to the people; it is like exhorting men to exchange their blood, or their children. Suspicions dart out of their holes like bee-eaters. Won't so-and-so, my neighbour, get an unfair share? The bit he wants to swap for my piece is smaller. Give up my fertile patch by the river where bananas flourish for that barren stretch of hillside? Never! Somewhere there is a trick in all this. . . .

21:Huxley Q, T-5 (no date) 1960 FL11 Lno FL11

question of bribery and corruption crops up everywhere and all concerned on the official side recognize it as their deepest enemy. But when I put Mr. Ayan's points to them they were a little sceptical. 'Of course there is bribery,' they said, 'but it is not as bad as that. And it is not the people who oppose land reforms, it is the politicians.' Mr. Ayan had just sent a telegram to the Governor asking for the removal of the 'reactionary D.C.' in Kisumu, so relations were naturally a bit strained.

VI

On the way to Maseno we had passed the ostensible *casus belli* between District Council and Government: the Kisiani hills, a barren, rocky bluff entirely denuded of vegetation and a scene of the most gruesome erosion, given over to goats browsing on boulders and any indomitable weed that had managed to germinate. This place had been leased by the District Council to the Government for the purpose of afforestation and about 800 acres of trees had been planted at a cost of £13,000.

Afforestation is unpopular. Goats were allowed to destroy the Kisiani seedlings and, when the forest department put up fences, people came and tore them down in the night. Others started to cultivate in defiance not only of the terms of the lease, but of regulations which forbid cultivation on steep hillsides. All this, in the official view, was part of a deliberate political campaign to stir up anti-Government feeling.

The Kisiani quarrel brought to a head bad feeling between the Central Nyanza District Council and the Government. All the Councillors are African save for the chairman, who is the D.C. Most of its senior technical staff are European and, in particular, it employs (as do all District Councils with large revenues) a fully qualified accountant to manage its finances.

Those elected Councillors most anxious for unrestricted freedom objected strongly to this accountant. Africans, they said, should have the spending of African money without European interference. Officials retorted that in proper,

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

honest accounting lies the only defence against wholesale bribery and corruption—against the sort of thing Mr. Ayan had complained about so powerfully. 311 648 668

In the midst of this controversy the Council, with its elected majority, repudiated the lease of the Kisiani afforestation area and refused to take steps to stop sabotage of the plantations. The Government retorted by demanding repayment of the £13,000 spent upon them. This would have meant raising the Council's annual rate from eighteen to twenty-one shillings on each adult male. 177

This demand to increase the rate was, of course, turned down flat by the elected Councillors, who in their anger sacked the accountant, appointed a totally unqualified African at £1,000 a year to succeed him, and threatened to dismiss other European staff on grounds of race. They also voted large increases in their own salaries and allowances. [186]

Naturally I asked Mr. Ayan's views. The Kisiani trouble, in his account, boiled down to a number of misunderstandings. The individuals who owned cultivation rights in the hills had not, he said, ever fully understood the matter, it had not been properly explained. They thought the trees would be theirs, not common property. They had never given their permission on paper, with marks or signatures. The matter was explained to them by an unpopular chief who did not wait to hear all their objections. When they grazed their goats in the plantations they thought they were on their own property and were much aggrieved when they were fined. They had no land elsewhere. Land hunger was so acute as to be a more important matter even than marriage. 'If a man should lose his wife he can buy another; but once the land is gone you cannot buy any more.' 311 177 648

It looked like one more failure in public relations. But the officials denied this. 'We explained over and over again,' they said. '*Barazas*, news-sheets, radio . . . Everyone had a chance to put his case. No, behind it is the old story—politicians spreading rumours that it's all a trick to steal the land.' [668]

[pp. 110-151 not processed]

241 Similarly, during this time she must be careful where she walks. She
841 can ruin a crop by walking through it. But, of course, in this case, she would suffer with the other members of the family.

462 From early childhood the girl is brought up as an agricultural
787 labourer. There was no class of women divorced from the soil. The
791 only class whose labours in agriculture were lightened were the women who belonged to the divining cult of " SEWE." Sewe is the spirit of divination and is supposed to have descended on those who have been delirious in illness. The delirium is the sign of possession. The devotees of the cult are mainly women, and they are a fairly common sight as they go about their avocation. They are skilled beggars as
[301] well as diviners. With their bodies festooned with strings of beads, shells, bells and other barbaric ornaments, they pass from kraal to kraal, and standing with their bodies leaning forward supported by a
[431] hand resting on a short stick they sing songs of the countryside and and are rewarded by presents of small baskets of grain. In this way women who have been ill are enabled to help to replenish the grain stores, which have probably run low during the illness.

241 Gradually a change is coming over the life of the women, due to
177 white influence. Ploughing by the men with teams of oxen, is setting women free for other tasks. This movement is by no means wide-
252 spread, but it has begun, and its effect on the women has been great.
462 Even if the husband has no team and plough himself, many wives do not rest content until the husband has hired a plough owner to come along and plough up the land. It is not unusual for ploughs to be taken 15 miles for this purpose. Again, the use of hand mills of the " Colonist " type, is easing women of much labour at the grind stones. These are much more common than ploughs, probably there are twenty mills for every plough in use. This is partly accounted for by the fact that the mills are turned by hand power, not by oxen. At this labour girls and women take their share, but whereas you would never see a man down on his knees at the grindstone, you do see them turning a mill. New activities are employing the time of many women, and those who have learned to knit or make palm mats in recent years are rapidly increasing in numbers.

CHILD LABOUR:

857 Generally speaking, from early childhood, all are required to make some contribution to the activities of the home. Girls for the fields, and boys for herding, is the broad division of labour, though the boys also lend a hand in the fields, and, very occasionally, a girl or woman may be seen herding. With the opening up of
593 avenues of wage-earning to the boys on coffee and tea estates, and in other forms of employment, the male child is being made by impecuni-
[464 ous parents to make his contribution to the family hut tax,
● 651]

593 ous parents to make his contribution to the family hut tax. The most unruly elements, again speaking generally, are these lads when they return to the Reserves, though some of them come back much benefitted in every way so far as one can tell.

PROVISION FOR THE AGED:

888 178 There is nothing in the social life of the Luo in the way of organized old age relief. The aged look to the younger members of the family to support them. In days gone by when there was no Hut and Poll Tax, and when all the clothing needed was a goatskin, all that the younger members had to provide was food and shelter, with an occasional fee to the medicine man, in the case of illness. Even funerals, when the aged died, were simpler than now. If the parents outlived their offspring there was always the wider circle of the sub-clan or clan to appeal to. And outside the clan were the relations-in-law, upon whom many more claims are made than is customary with us.

But, now, the whole problem of the support of the aged is vastly more difficult, and this in spite of the fact that health measures are beginning to increase the chances of the younger elements surviving [166] to adult life. As against this can be offset the fact that many of the younger members of a family leave the Reserves and remain away for years, and indeed some never are heard of again. Also, there is more than a tendency for the younger generation to go its own way, and commit itself to a more civilized mode of life. There is a definite cleavage between the lives of the younger and the older generations. This is accompanied by weakening ties of common interest and filial duty.

888 178 ● 651 Under our regime, and particularly under our system of hut tax, we have driven a wedge into the solidarity of family life which has given a grievous blow to the foundations upon which community life rests. The old are felt to be a burden as never before in the history of the Luo. It is inevitable that more and more burdens should be placed upon the younger elements in tribal life, but we have added to them with, in many cases, a certain element of ruthlessness which is very keenly felt and resented. I quote one instance of what I mean. An old couple in the Reserves with two sons, one a ne'er-do-well a worthless fellow, a jailbird. The other son just rising Poll Tax age. The old couple lived in a rather tumble-down hut, and were known as having no resources, no cattle, sheep or goats. A few fowls formed their "wealth." The old father, while by no means decrepit, was long since past the stage when he could cultivate extensively or go out wage-earning. The old mother had indifferent health, and at times could hardly drag herself back from the well with the pot of

888 water. The young son could not find employment and was wander-
178 ing about trying to scrape together the money for his poll tax. Upon
651 the father came the demand for hut tax. He had no money and could not pay. Next year another demand was made, this time for the current year and for that of the previous year. Again he could not pay. The third year he was dunned for three hut taxes, and as he was unable to pay his hut was confiscated to Government, the door was sealed up, and his aged wife driven to seek shelter among neighbours. Homeless, the old man made a frantic effort amongst his relations, who were already liable to pay their own dues, and by dint of much supplication managed to get enough to satisfy the tax for the first of the three years, whereupon his hut was unsealed. Is it any wonder that the younger generation regard the aged as a liability as never before? Demands for hut tax upon the penurious aged is one of the greatest solvents of filial affection in the Reserves to-day, for the burden falls largely on the young.

As in the previous case, the woman's family believed that she was murdered and the man's family believed that she committed suicide. It is difficult to say which version is true. It is extremely unusual, however, for a woman to kill herself with a knife, and I have not recorded another case. There was one case among the men, Number 6, but this was a modern "intellectual," who lived in a Council house with a plastered ceiling, which was hardly suitable for hanging in the traditional way. 762 159

The next case is the one mentioned earlier involving a woman's fear of the consequences of her son's behavior.

Suicide Case No. 16.

The woman in this case was the wife of a squatter who was a servant to an important Chief. The Chief helped him to get married to this woman, a local girl who was in fact related in some way to the Chief. After his establishment as an affine of the Chief, the *jadak* became very wealthy and built his own village on a place allocated by the Chief. He married a second wife after the building of his village and, just before the case we are discussing, married a third wife. The first wife had many children, most of whom were daughters. At the time of her suicide, all but one had married and her house was very wealthy. The houses of the other two wives were therefore extremely jealous. 762 159 595

One day during the short rainy season, the owner of the village, the husband, wished to make a present of *sim-sim* to his Chief and benefactor in order that he might pay the tax which at that time was calculated on the number of wives and also to pay the traditional tribute to the Chief. The woman's son at about that time invited a large number of guests to his village and demanded that his mother give him *sim-sim* with which to entertain them. She refused because she knew her husband intended to use the entire crop. The son disobeyed [651]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 553 was given his name reveals their attempt to avoid the consequences of his act.

762 159 684 The second case arises from a breach of customary law which in the old days would have meant banishment but which today brings social ostracism.

[178]

Suicide Case No. 2.

The suicide was caught in the act of intercourse with his full brother's wife. The Luo believe that such an act involving members of the same *Jokamio* (that is, those descended from the same mother or grandmother) brings *chira* to the whole clan. The security and solidarity of family relationships are [578] threatened by the act because it involves quarrels which may lead to violence within the primary segment of the clan. In this case the brother did not tell the elders of the clan but merely threatened to do so. The guilty man returned to his own homestead and hanged himself in his hut. The house was destroyed [783] and members of the extended family were cleansed by the *jabilo*. The cleansing ceremony took the same form as in the first case, with the addition that the village was sprinkled with medicine in order that it might continue to be used by the dead man's family.

In the next case there are two clear motives which led to the suicide. The first, perhaps the most important, lies in indigenous beliefs and attitudes, while the second lies in more modern attitudes.

Suicide Case No. 3.

159 762 556 This Luo was about 30 years old and had been employed as a driver for the Government for many years. Drivers in Kenya receive a relatively high salary, and in addition some take advantage of their position and make extra money by illegally [661] charging people for transportation. Through these activities, he became a relatively rich man and was able to marry a total of five wives at his comparatively young age. He was also wealthy

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

firebrands. So in a small brick room put up by Bishop Tucker in 1911, and now the secondary school's common-room, I met a bunch of schoolmasters, all fluent in English, well-informed and politically-minded.

I put to them the question that most puzzled me; land reforms are unquestionably progressive and of benefit to Africans; by raising living standards they will advance the prospect of self-government; why, then, do so many educated Africans appear to oppose them?

The answer I got was unexpected. Mr. Samwell Ayan, a history teacher, a Makerere graduate, head of the Kenya Teachers' Union and an elected member of the District Council that was embroiled in trouble, spoke impressively—and with moderation and logic.

'People are not getting justice,' he said. 'Men are losing land they are entitled to because of bribery and corruption in the African Courts. Everyone is being bribed—land elders, chiefs, witnesses. Yes, from the African Courts a man can take his case before the D.C., but what can the D.C. do? He sees only the evidence in front of him; it is all rigged; the man loses his land. I know of many cases like that. The Courts are rotten—a washout.

'I know of a case where the president of the Court altered all the evidence after it had been given and sent it up to the superior Court. When the plaintiff heard the false evidence read out, he was hopelessly confused. Clerks take bribes to keep appeal cases beyond the date when the right to appeal lapses. This is being done even in Kisumu. All the land elders can be bribed. The hunger for land is so great.

'What should be done? First, hear land cases before everyone in the location who has, or is entitled to, land—a real people's court. Then, make tape-recordings of evidence in the lower courts; if the evidence is changed, everyone will know. And let the district officer take all land cases so that he hears everything.

'It is because of this corruption and unfairness that people oppose land consolidation. All the same, it has got to come. It is progressive. But do not let it be forced.'

Mr. Ayan spoke with sincerity and even passion. This

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

question of bribery and corruption crops up everywhere and all concerned on the official side recognize it as their deepest enemy. But when I put Mr. Ayan's points to them they were a little sceptical. 'Of course there is bribery,' they said, 'but it is not as bad as that. And it is not the people who oppose land reforms, it is the politicians.' Mr. Ayan had just sent a telegram to the Governor asking for the removal of the 'reactionary D.C.' in Kisumu, so relations were naturally a bit strained.

VI

On the way to Maseno we had passed the ostensible *casus belli* between District Council and Government: the Kisiani hills, a barren, rocky bluff entirely denuded of vegetation and a scene of the most gruesome erosion, given over to goats browsing on boulders and any indomitable weed that had managed to germinate. This place had been leased by the District Council to the Government for the purpose of afforestation and about 800 acres of trees had been planted at a cost of £13,000.

Afforestation is unpopular. Goats were allowed to destroy the Kisiani seedlings and, when the forest department put up fences, people came and tore them down in the night. Others started to cultivate in defiance not only of the terms of the lease, but of regulations which forbid cultivation on steep hillsides. All this, in the official view, was part of a deliberate political campaign to stir up anti-Government feeling.

The Kisiani quarrel brought to a head bad feeling between the Central Nyanza District Council and the Government. All the Councillors are African save for the chairman, who is the D.C. Most of its senior technical staff are European and, in particular, it employs (as do all District Councils with large revenues) a fully qualified accountant to manage its finances.

Those elected Councillors most anxious for unrestricted freedom objected strongly to this accountant. Africans, they said, should have the spending of African money without European interference. Officials retorted that in proper,

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

Behind and beyond are old beliefs that are still alive. A man can lay upon a piece of land, when he is dying, an oath that binds his heirs to hold on to it for ever, and will destroy anyone who sells it out of the family—an entail with the sanction of magic. And then old homesteads on the Kano plains sheltering behind euphorbia hedges contain the bones of the deceased owner, who is buried under the floor of his hut. So consolidation may ask the son to exchange not merely a field of maize, but the bones of his father, the terrestrial anchor of his father's spirit. No wonder it is often too much to ask, and that politicians find these deep fires easy to fan.

To reach Nyabondo we climbed a small escarpment, the beginning of the Kipsigis hills, left the car beside a track and walked to the farm of a young, pleasant-mannered school supervisor called James Onyango, one of the leaders of the enclosure movement. We sat under a tree near his new tin-roofed modern bungalow, above a shallow valley with a stream. The country here is gently rolling and thickly dotted with roofs of homesteads. Many people had gathered in a circle; the women sat together in bright cottons and gay head-scarves, plump and glossy, most of them with grave-faced, round-eyed babies sleeping in their arms or crawling about the grass beside them. This question of land touches the women at the core. James Onyango told his story in English.

'The idea of exchanging gardens came to us two years ago; we had heard of it in other places; most of us were interested, and asked the Government to advise. We held a meeting and agreed unanimously to consolidate, all of us within the Kadianga clan, fifty-nine families. In our clan are three sub-clans; each appointed three men to form a committee. Each of these three was a *m'guru*—an elder whose task is to look after the land, and one of these was made the president.

'We started to exchange our gardens, and at first everything was fair. Then came elections for the Legislative Council and the District Council. The candidates thought they would gain popularity by speaking against the land schemes. They campaigned among the people, and some listened. They had clever ways. In each sub-location they had an agent who

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

would write to the papers, or sign letters written for him, saying the people were against these schemes. And so some of us became confused. In this location we still wanted to exchange land, but some of our neighbours turned against it, and we had to stop.

'At the end of 1958 the opposition became very strong and the D.C. called a meeting to decide. The opposition staged another trick. They packed the meeting with supporters from other locations, even women who knew nothing about it at all. This was a noisy and a difficult *baraza*. Even with these methods, when it came to a vote the meeting was evenly divided. The casting vote was left to the D.C. He decided against it, and so the scheme was closed.

'We who had always been in favour were greatly harmed. We wanted the Government to bring water from the river, and surveying had already started for a piped scheme. Some of the elders went to the D.C. to ask him to change his mind, but he refused. In January, he agreed to send two people to Elgon Nyanza to see what was being done there. They saw it all, and when they returned we elected *liguru* after the pattern of the Elgon people. We called everyone together in groups, men, women and children, to plant hedges round the *shambas* that had been exchanged. I myself exchanged four pieces, and in some cases I paid money and cattle to get all my land in one piece. We managed to plant hedges round two or three *shambas* a day. Then we went to the D.C. and told him what we had done and asked him to send an officer to help us plan the use of our *shambas*. When he heard what we had done, he agreed.

'Now we have enclosed all the land of our clan and we want to have it registered. We asked the D.C., but there were still six men who refused, and the D.C. would not do it until everyone agreed. In the last few days two more have agreed, so now there are only four against it. When they agree we shall have titles to our land and then no one can upset the work we have done.'

In each sub-location they had an agent who

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

fifty years later their son, Mr. Paddy Savile, after many years' service in Tanganyika, was to become Chief Agriculturalist to the Government and help to make a path for Progress through the land of his birth. Maseno mission was envisaged as 'a Christian base from which the Gospel might be carried far and wide into the surrounding country, with a school for the sons of Luo chiefs at which future leaders of the country would be trained in a Christian atmosphere.'

Four small boys called Onduso, Odindo, Owiti and Oroa were drafted from Kaimosi to form a nucleus and every 'chief' was asked to contribute two sons. 'Chief' was an arbitrary term, and the leading Luo objected strongly to the disappearance of their sons, probably regarding it as another form of slavery. In those days the Luo went stark naked, used beads or hoes for currency, and prized most highly the black ostrich feathers which warriors wore as head-dresses.

'In five years' time a hundred small boys from the school were sent out, two by two, for a fortnight at a time, to teach in Kisumu and in the villages. Then they came back to Maseno for a month for further teaching. In this way the original Iona idea began to be realized and Maseno became a base of Christian influence.' Bishop Willis developed this idea in a letter: 'It affords a shelter amid a sea of temptation; it makes Christian teaching applicable and Christian living a possibility.'*

So from four small and doubtless bewildered boys under a tree, Maseno developed until by the time of its golden jubilee it embraced primary, intermediate and secondary schools, a teacher-training college, a Jeanes school for adult education, a college for agricultural instructors and veterinary scouts. Even the girls had by this time been included, although their education for years lagged far behind that of their brothers.

At the time of my visit this part of Nyanza was a-buzz with rumour and diatribe, for the District Council in Kisumu had just been dissolved by Governor's decree. To balance the official line on this, I asked to meet a firebrand or two, and everyone agreed that Maseno was the place for a crackle of

*From *Fifty Years in Nyanza*, by Elizabeth Richards, M.A. Maseno Press. 1956.

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

firebrands. So in a small brick room put up by Bishop Tucker in 1911, and now the secondary school's common-room, I met a bunch of schoolmasters, all fluent in English, well-informed and politically-minded.

I put to them the question that most puzzled me; land reforms are unquestionably progressive and of benefit to Africans; by raising living standards they will advance the prospect of self-government; why, then, do so many educated Africans appear to oppose them?

The answer I got was unexpected. Mr. Samwell Ayan, a history teacher, a Makerere graduate, head of the Kenya Teachers' Union and an elected member of the District Council that was embroiled in trouble, spoke impressively—and with moderation and logic.

'People are not getting justice,' he said. 'Men are losing land they are entitled to because of bribery and corruption in the African Courts. Everyone is being bribed—land elders, chiefs, witnesses. Mr. Ayan had just sent a telegram to the Governor asking for the removal of the 'reactionary D.C.' in Kisumu, so relations were naturally a bit strained.

VI

On the way to Maseno we had passed the ostensible *casus belli* between District Council and Government: the Kisiani hills, a barren, rocky bluff entirely denuded of vegetation and a scene of the most gruesome erosion, given over to goats browning on boulders and any indomitable weed that had managed to germinate. This place had been leased by the District Council to the Government for the purpose of afforestation and about 800 acres of trees had been planted at a cost of £13,000.

Afforestation is unpopular. Goats were allowed to destroy the Kisiani seedlings and, when the forest department put up fences, people came and tore them down in the night. Others started to cultivate in defiance not only of the terms of the lease, but of regulations which forbid cultivation on steep hillsides. All this, in the official view, was part of a deliberate political campaign to stir up anti-Government feeling.

The Kisiani quarrel brought to a head bad feeling between the Central Nyanza District Council and the Government. All the Councillors are African save for the chairman, who is the D.C. Most of its senior technical staff are European and, in particular, it employs (as do all District Councils with large revenues) a fully qualified accountant to manage its finances.

Those elected Councillors most anxious for unrestricted freedom objected strongly to this accountant. Africans, they said, should have the spending of African money without European interference. Officials retorted that in proper,

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

honest accounting lies the only defence against wholesale bribery and corruption—against the sort of thing Mr. Ayan had complained about so powerfully. 311 648 668

In the midst of this controversy the Council, with its elected majority, repudiated the lease of the Kisiani afforestation area and refused to take steps to stop sabotage of the plantations. The Government retorted by demanding repayment of the £13,000 spent upon them. This would have meant raising the Council's annual rate from eighteen to twenty-one shillings on each adult male. 177

This demand to increase the rate was, of course, turned down flat by the elected Councillors, who in their anger sacked the accountant, appointed a totally unqualified African at £1,000 a year to succeed him, and threatened to dismiss other European staff on grounds of race. They also voted large increases in their own salaries and allowances. [186]

Naturally I asked Mr. Ayan's views. The Kisiani trouble, in his account, boiled down to a number of misunderstandings. The individuals who owned cultivation rights in the hills had not, he said, ever fully understood the matter, it had not been properly explained. They thought the trees would be theirs, not common property. They had never given their permission on paper, with marks or signatures. The matter was explained to them by an unpopular chief who did not wait to hear all their objections. When they grazed their goats in the plantations they thought they were on their own property and were much aggrieved when they were fined. They had no land elsewhere. Land hunger was so acute as to be a more important matter even than marriage. 'If a man should lose his wife he can buy another; but once the land is gone you cannot buy any more.' 311 177 648

It looked like one more failure in public relations. But the officials denied this. 'We explained over and over again,' they said. '*Barazas*, news-sheets, radio . . . Everyone had a chance to put his case. No, behind it is the old story—politicians spreading rumours that it's all a trick to steal the land.' [668]

[pp. 110-151 not processed]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

goals which have been carefully weighed and assessed as to the possible supernatural and social consequences. The Joluo believe that a goal does not justify the means if the means require violence, unless all methods of arbitration, conciliation, appeal to authority, both temporal and supernatural, have been tried and proved to be unsuccessful or inadequate.

Violence requires cleansing—physical and spiritual cleansing of the most exacting nature—to avoid the supernatural consequences (*chira*) which violence may bring in its wake. One case has been recorded which contains an excellent description of the ceremonial and ritual cleansing thought to be essential after a murder. This particular murder was planned and executed by a group which, after years of thought and effort to resolve the conflict without violence, finally resorted to murder. Obviously, with the coming of the European, other factors were involved to escape detection for an act which in the old days would have given the group high status within its own community and which would have created feuds or precipitated a war that ultimately would have been resolved by blood compensation or schism of the political unit and migration by the weakest group.

Violence which arises immediately and unpremeditatively from quarrels, drinking, infidelity, sex, marital tensions, or family differences, and which results in a death, is not regarded in the same way as predetermined action decided upon as a last resort. Ceremonial cleansing is still necessary but does not take the extreme form because these acts are regarded by the Luo as bringing consequences which affect the individual only, that is *kwer*, and not *chira*, which affects the group, clan, or tribe as a whole. Fortunately British law makes a similar distinction: that between murder and manslaughter. It will be found therefore that the majority of cases involving Joluo which have come before the courts of Kenya as murder cases are resolved and punished as cases of manslaughter. The Joluo do not, however, understand why many of those convicted un-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

der the head of manslaughter should be punished at all. They feel that a person who makes the mistake of killing in anger is or has been or will eventually be punished by the ancestors, God, the elements, by illness, bad luck, misfortune, or the like, in the inevitable nature of things.

It is believed that cold-blooded, premeditated murder brings *chira* to the group and is therefore punished by the tribe or by the segment affected. The group or the individual who took what they regarded as this calculated risk was eventually banished from the tribe or if large and strong enough to dominate the political unit to which the deceased belonged could force his supporters, usually his segment of the clan, to break away and leave the area. Luo kinship describes all members of the clan in the same genealogical generation as brothers; fratricide, therefore, has a very wide range.

Luo clans occupy and are identified with a geographical area. The clan and the area it occupies are usually called after the eponym of the tribe. Those living within a clan or tribal area who are not members of the clan or tribe are regarded as squatters (*jodak*) with limited rights. They may be unrelated squatters, but most often are found to be affines of legitimate clan members. Murder committed by such persons invokes immediate counteraction on the part of those who belong to the land by virtue of descent, *jogweng*. Cattle could be taken by force, the culprit banished or killed, and/or a woman from that group married by a member of the dead man's minimal lineage, his *jokakwaro*, to raise seed unto the dead man's name. This woman would be regarded as the wife of the dead man, her children would placate his ghost as father (*wuoro*), the physical father would merely serve as genitor.

One major clan, *Kakia*, of a powerful tribe, the Seme of Central Nyanza, descended from a woman of this type—but then not exactly of this type: what happened was as follows. A *jadak*, living in the clan area of Seme, killed the son of an important elder of the tribe. He fled to his own tribal land to

Each Luo tribe (*piny*), coterminus in the main, as has been said, with the present administrative location, was an autonomous political unit. As among the Nuer, one of the chief characteristics of a Luo tribe, and one by which its autonomy may be defined, is to be found in the different ways in which homicide was regarded and treated in pre-European days. There were local variations but in general the principle followed was that *cut*, compensation (a girl or cattle for a kinsman of the slain man to marry a wife with and raise heirs to his name,) was paid only for the killing of a fellow tribesman. No *cut* was paid for killing men of another tribe in war, raids, or as an outcome of the ritual demonstration called *buru*,[1] for they were *wasigu*, enemies, and a state of feud between the lineages involved, and sometimes of war between the two tribes, developed. Likewise no compensation could be paid for slaying a clansman, but atonement was made by the sacrifice of an ox, provided by the kin of the slayer and eaten by representatives of the whole clan, who might moreover insist on the slayer marrying a wife to the name of the dead man. The line of political cleavage between tribe and tribe thus ran through the points at which the obligation to pay compensation or make atonement for homicides ended for a particular group of people and it is so regarded by the Luo themselves. For example, when the Uyoma people and the Asembo people lived in the same territory they paid compensation for homicide between them but when they separated they ceased to pay it.

In tribes in which the tribesmen, except for some small lineages of strangers (*jodak*) intermingled with the dominant clan, are all members of the same clan, such as Karacuonyo tribe, compensation for homicide was not, or was rarely, paid, because the strangers had close kinship links with the dominant clan and would, I was told, have refused compensation in cattle, though they might have accepted a girl, since had they done so they would have emphasized a distinction they were anxious to obliterate. It was only in tribes in which there were beside the dominant clan other powerful lineages occupying their own lands within the tribal territory, as the Jokakan and Kaluo in Alego, that *cut* was paid regularly for homicide and could be enforced by appeal to arms. In other words, where there was considerable political cohesion, expressed in terms of clanship, the killing of a man was treated as a sin; where there were marked sectional interests within the political unit of the tribe it was treated as a tort; and where there were social links but political separateness it was treated, unless it was a wanton act of individual homicide, as provocation to a feud but without moral disapproval or means of legal settlement.

The political boundary, which in its moral dimension signified a balanced hostility between adjacent tribal groups, had its material expression in the *thim*. The *thim* was a stretch of bush country, the home of buffalo,

[1] If a man of one tribe killed a man of a different tribe in a personal quarrel, and not in war raiding, feud, or ritual demonstration, he might pay compensation in cattle, e.g. if a Karacuonyo man killed for some private reason a Kocia man who was taking cattle to his in-laws in Karacuonyo territory.

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

lineage of the murdered man endeavoured to kill a member of the murderer's lineage in revenge. But the family of the murderer could forestall this process by offering a girl or twelve head of cattle in compensation. If wilful murder occurs between segments within the same maximal lineage, fighting may again occur and a member of the murderer's segment be killed in revenge. Here it is impossible for a girl of the group to be offered in compensation since she would be of the same maximal lineage and exogamous group as the murdered man, and could not be married by any kinsman of his. But the senior elder recognized by both segments calls a council representative of both, and the murderer, if judged guilty, is supposed to be exiled. When a man kills a close relative, belonging to his own minimal class A segment of the maximal lineage, it is *masiru*—a ritual offence.[1] The murderer must bury his relative and stay by the grave until *chola* (the first mourning period) is finished. He must cohabit with the dead man's wife, if she has borne no children to her husband, so that she may bear a child to be named after the dead and to guard his homestead.[2]

The level of groups between which marriage can take place thus corresponds to the level at which general relations cease to be those prescribed between kinsmen, and the groups with which marriage is possible tend to be those between which hostility is the usual attitude. The Luo recognize this correlation, and regard *ach* (in-laws) and *wasigu* (enemies) as almost interchangeable terms.

The normal form of marriage is negotiated by go-betweens on behalf of bride and bridegroom with their respective families. A transfer of cattle has to be made to the bride's family, the normal number being twelve. When the two families are agreed as to the suitability of the match, the groom arranges for a party of his friends to drag the bride from her home. The bride is expected to make a show of resistance and weeping, but it is significant that the dragging must not take place when the bride's parents are absent from the homestead. After the bride is thus brought to the *simba* of the groom, the latter deflowers her in the presence of married men and women witnesses; the tokens of her virginity are placed on potsherds and paraded in triumph to the bride's home the next day and a feast is held there. If the bride fails to prove her virginity in this way no feast is held, and one head of cattle less is paid to her family. The real commencement of a marriage is said to be the groom's sending of *ruch kode* (the 'heifer of the stick'), which goes to the bride's mother, and a bull to her father. Then comes the main payment, varying according to the wealth of the two parties and to the general level of Luo wealth in cattle at the time, but usually eight upwards. After this bride and groom live together for some time in the latter's *simba*, and then the bride gets permission to return to her own home. The groom goes there with a heifer and a bull, and the feast of *kistera* is held. This completes the statutory twelve cattle of the bridewealth. Bride and groom then return

[1] Some statistics of actual cases would be required to discover how far the level of segment within which murder is treated in this way coincides with that within which widows of kinsmen may be inherited and assistance given in marriage payments. My stay was too short for the collection of such statistics, but my impression was that such a coincidence is very vague, and it is certainly not consciously present in the minds of the Luo.

[2] Cf. Evans-Pritchard, *Some Aspects of Marriage and the Family among the Nuer*, pp. 5–10. Despite its importance among the Nuer, the obligation of ghost marriage is far from universal among Nilotic peoples. Among the Luo-speaking group it is not practised by the Kenya Luo nor by the Alur nor, probably, the Acoli.

241 Besides weeding, there is much to be done to protect the crop,
[789] Hail storms do a lot of damage at times, and to protect the crops a
" medicine " is employed called ' migalo magalo pe." This consists
of herbs tied in a bunch to the top of a pole about 6—8 feet high,
which is stuck in the middle of the field. (Herdsmen too, use this
[231] to keep themselves dry while out with the cattle, and I have seen a
herdsman accompanying the cows with these herbs tied to the top
[674] of his spear.) Except in time of famine, stealing from the crop is
unknown, which contrasts favourably with complaints made from time
to time that Natives steal maize and coffee from European farms.
In their own community such an offence is practically unknown. But
241 four-legged depredators are a serious problem in certain localities.
417 Fields are enclosed in fences of the branches of thorn trees, laid on
136 the ground, and these do give a certain protection against wild pigs,
monkeys and baboons. But they are of no use against hippo and
elephant. To protect crops, mainly sweet potato, against the hippo
it is the practice to erect a small temporary hut, which is occupied at
night by a guard armed with a couple of spears. It must be a weary
business, for the potatoes are cultivated close to the lake edge where
mosquitoes swarm, so between the hippo and the mosquitoes the guard
[224] must have a trying time. In old days before the Game laws came in,
organized hunts were held, which were very successful.

241 The most difficult animal is, of course, the elephant. These have
disappeared from Central Kavirondo but still infest districts like
136 Mirunda and Sakwa in South Kavirondo. They can do heavy damage
both to millet and sweet potato. The beating of pots and pans is tried
to scare away the elephant, while occasionally the more daring venture
forth from the hut to throw stones or otherwise drive away the beasts.
This is an operation attended with peril in the dark of the night, and
occasionally lives are lost in this way. Lives too are lost through
guards mistaking their fellow guards for wild animals. Jok, one of
the most famous of ancestors of the Luo, is said to have lost his life
in this way. The story is that before going off to drink beer, he
told his sons to go on guard in the field that night. They refused to
his face, but when he had gone thought better of it, and went on
guard. He returned from the beer drink, and went to see what was
happening in the field, believing that there was no guard. His sons
mistook his footsteps for that of a pig, and speared him with fatal
results. Similar things still occur from time to time.

241 Birds, especially weaver birds, are a pest as the grain crop
ripens. Scarecrows are employed, both mechanical and human. Of
136 the former an inverted cooking pot on the top of a short pole is a
857 common device. Boys are employed in large numbers when the birds
are most troublesome, and their harsh cries are quite a part of the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

681 pay the fine, and from the amount the judge takes a portion for himself and passes the remainder to the successful litigant.

728 **Making peace between sections of the tribe.** Should there
627 be a quarrel between two sections of the tribe and a desire be felt to end the strife, the chief of one section goes to the chief of the other with a few of his principal men, and they spend the afternoon and night together discussing the difficulty and finally coming to terms. The following day a goat is killed, some of the contents of the stomach are smeared over the chests of those present, and a little of the meat is pounded in a mortar and eaten as a sacred meal to ratify the terms of peace. As they eat the meal, they promise to live at peace, the form of oath taken being "By the dead dog."

●674 **Theft.** Cattle lifting is the most common form of serious
789 theft. Men seek to steal cattle from members of the same tribe living at a distance from their own district, because the animals stolen can thus be more easily secreted. A man who intends to rob a kraal first visits the place with his son in order to work magic and to make his preparations. He takes with him a number of sticks pointed and prepared for the magic, and indicates certain spots to his son, who drives a stick into the ground at each place. These are magical sticks which cast a spell upon owners of cattle. The magic is followed up at night by the man's going to the kraal, opening the gate and driving away the cattle while the people are sleeping. Should the animals make any noise or prove stubborn and refuse to leave the kraal, it is a sign that the owners have received some intimation of the intended theft and have taken precautions to make more potent magic to frustrate the robbery. Under
[685] such circumstances the cattle-lifter beats a hasty retreat before he is discovered and captured, as he knows that he will receive no quarter, but will certainly be put to death.

Chiefs possessing large herds of cattle take the precaution to keep a supply of powerful medicine over the gateway leading into the kraal, and also place it in various parts of the kraal so that, when a thief enters the kraal, he loses his
554 strength, is unable to walk and so is captured and put to death. A successful cattle-lifter soon becomes a noted man

Besides dowry payments the Luo had other means of obtaining cattle before the advent of the Europeans. Two of these ways, which no longer exist, were the capturing of enemies' cattle during inter-tribal wars and robbery during the night. Because there were only few cattle in those days the number of cattle paid for dowries was very limited, not even half of what it is today.

Inheritance and exchange are now the natural means by which the Luo obtain cattle. As mentioned above in discussing dowry the first eight to twelve cattle paid for a dowry, though nominally known as the property of the father of the girl, are in the real sense the inheritance of her full brothers. The father can do anything he likes with them during his life-time, provided he consults the girl's eldest brother. It frequently happens that there is disagreement between the sons and the father, who may try to dispose of these animals without consulting the sons. The other animals belong to certain individuals, e.g., father, uncles and mother. Those of the father if he is a polygamist are inherited by one of his sons who has no sisters. If the father has two or more sisterless sons born of different mothers they inherit equally the special cattle he gets from the dowry of those daughters who have full brothers. These sons also inherit the cattle, goats or sheep that he gets by other means, e.g., those obtained by exchanging millet or maize and those paid to him for the dowries of his nieces. Cattle paid to the mother-in-law by her son-in-law are inherited by her eldest or last son. Usually a father gives more to a son whose mother has died if he is a good son. He calls this son his orphan. If a father loves one of his sons more than the others he may take some of his cattle to one or other of his friends, and tell him that they can only be taken after his death by the loved son.

A man inherits his brother's animals if the brother dies and leaves no son. If a man, having a brother, dies before having children by his wife, and the widow marries someone else of her husband's clan, children born to her by her new husband belong to the brother of her former husband, and so, if they are girls, the brother inherits most of the cattle paid for their dowries. If, however, these girls have a brother, he inherits the cattle.

Some people start to obtain cattle by exchanging their millet or maize for sheep, goats and poultry in the first instance, and when the number of these small stock has increased, they, in turn, are exchanged for cattle. Sometimes a man gives his friend an assurance that if he gives him some goats he will in return give a heifer which can be kept until she calves. After weaning, the calf remains the property of the friend while the cow is returned.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

together again, and singly or in twos and threes run out and go through a fight with some invisible foes, again presumably, the evil spirits. They are very serious all the while, and the rest watch in silence their champions as they charge, retreat and cower down behind the huge shields. Then comes more feasting, with the customary offering to the sun, and finally they disperse. 764

The wailing is kept up in the case of a chief for six days, and performed twice a day at sunrise and sunset, but after the day of the dance each village mourns by itself; for a common person three days is the limit.

The corpse is buried in a recumbent position in the deceased's hut, but the hut continues to be occupied, generally by the deceased man's heir; it is not at once destroyed or disused, as some authorities, among them Sir C. Eliot, maintain. Last of all, when the mourning is over, an offering of beer, grain, and chicken flesh, is put on the grave.

The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, "It does not matter how much you pray, you fall sick and die just the same." The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits. 776 781 782

Witchcraft, however, and demonology occupy their minds far more. The wizard is greatly dreaded, and it is easy for an unscrupulous Kavirondo to obtain his neighbour's property by accusing him of having killed one of his relations by witchcraft, knowing that he will have his neighbours' support and sympathy. The wizard is sought both for good and evil purposes; his aid is invoked alike to detect criminals and to do harm to an adversary. In a recent case brought before the writer a man was accused of having murdered one of his wives by witchcraft. According to his accusers, the supposed murderer missed his razor and accused two of his wives of the theft. They both denied all knowledge of the missing article, and he gave them till the evening of that day to find it. When their term of grace came to an end, and the razor was not produced, he was alleged to have struck one of his wives, who was on the point of bearing a child. He then produced two charms which he affixed to their respective huts, threatening that the thief would be detected by the charm and would die. Next day the woman who was said to have been struck died after producing a still-born child. The curious result was that the man was tried for murder, the accusers believing that the crime had been committed by witchcraft, and the magistrate holding that, if the man caused his wife's death at all, it was by the blow which he was alleged to have given her. The blow turned out to be a myth, and the man was discharged, much to his accusers' disgust. 754 754 674

When a Kavirondo wishes to kill his enemy secretly, the usual method is to bury a dead rat or chicken at his victim's door. If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day. 754

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

avoid the immediate consequences and as a result war broke out between the people of Seme and the people of his tribe, Ugenya. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It is, to my knowledge, the only clan in Luo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Joluo attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Joluo had developed several devices to deal with cases of homicide. A wife could be married in the name of a murdered youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was deflowered by a stranger (*jokawiny*)

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

761 which is the infidelity of the spouse of the deceased; in the case of a child, by the adultery of its mother. Ritual cleansing of the members of the minor lineage is therefore necessary, as for *kwer*.

159 I mentioned above a classical case of homicide which illustrates what the Joluo regard as a calculated risk of the consequences. It deserves fuller analysis.

Case No. 1.

This case involved a group of nine related men. Only one of them was convicted, and he eventually was acquitted on appeal through lack of corroborative evidence.

A quarrel began between members of two major clans of the same tribe over the appointment of an assistant chief. The clan from which the assistant chief was appointed—we shall call it Jokoth—is alleged to have taken advantage of the clan—which we shall call Jokech—which was unsuccessful. The clans feuded in every way, over land, cattle grazing and so on, until the elders of Jokech decided, as a warning in the ancestral way, that they should burn the hut of a leading elder of Jokoth. This was done. The assistant chief arrested a member of clan Jokech, a person with whom he is alleged to have had a personal grievance, and this man was convicted of the burning and sentenced to a term of imprisonment. His sons fought hard and long to have him released on grounds of ill health and, when finally successful, took him home only to have him die shortly after. On his death bed, he made his sons swear to avenge his death.

Diviners and medicine men were consulted, and many methods were tried unsuccessfully for several years to bring clan Jokoth to its knees and to bring about the death of the assistant chief who had by now retired.

All was not well with the affairs of Jokech clan. Each new catastrophe was taken as evidence of the malevolence of the ghost of the deceased because his death remained unavenged.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

Finally, in desperation, his sons and a group of his *jokakwaro* consulted the head diviner, *jabilo*, to choose an auspicious day for the killing of the ex-chief and to collect the animals and materials necessary for cleansing after the deed had been accomplished.

The ex-chief was found and stabbed to death at the place named by the *jabilo* and his body was hidden in a nearby river. It was found several days later, and a witness was found who alleged that he came upon the group on the day of the murder in the act of disposing of the body.

Those who had had actual physical contact with the blood of the murdered man were cleansed as soon as they arrived home by the leading *jabilo* of the clan. He used a grey ash from burning the sacred *buombwe* vine. The minimal lineage, *jokakwaro*, assembled at the village of the senior son, who was the head of the lineage segment, and who had struck the fatal blow. There the following cleansing ritual was performed: at about two o'clock the following afternoon, a black sheep and red chicken were slaughtered by the head of the lineage. The sheep and chicken were first prepared by the *jabilo*, who placed his medicines in the mouth of the sheep and of the chicken before the sacrifice. The *jabilo* cut strips of skin from the animal and wrapped them around the spear and knives used in the murder. The spear had to be destroyed at sundown because the victim was related to the spear clan of the tribe. The meat was divided on the lineage principle and consumed ceremonially. The meat of the chicken was eaten only by those who actually struck blows.

The purpose of these sacrifices was stated by the *jabilo* to "keep the spirit of the murdered man from doing evil to the clan." It also cleansed the bodies of those who drew blood so that they could now eat with their families and once more participate in the activities of the village and clan.

After the meat was eaten, those present held a meeting to decide which old woman should act as a wife to the ghost of

584 the negotiations, which is partaken of in a hut, not outside. To this feast three or four friends of each side are invited as witnesses. When the beer drinking stage has been reached, the company sit round the [273] beer pot in a circle, and the provider of the feast takes the long hollow beer-sucker, puts the end provided with a strainer in the pot, takes a few sucks, and then hands it across to the other party with the invitation to drink if he agrees to a matrimonial alliance between the two families taking place. If the second party desires at the last moment ● [675] to withdraw he declines to drink, but once having accepted the invitation and completed the contract by drinking, it is as irrevocable as a contract can be. The children thus pledged to marry may be so young that the marriage can not take place for years, or the girl may be a child, while the other may be a man already married. The girl so pledged in this way is known in some parts, as in Asembo, as " nyar oseke," " the girl of the beer sucker," and the Luo have no stronger matrimonial contract. It is hedged about with potent penalties, 584 mainly magical, in case of any breach of the contract by either of the 789 parties pledged. But even this most binding of all binding contracts is not invariably kept. Occasionally a girl will not submit to the fate marked out for her, and if she can find a man brave enough to join his fortune with hers, they undergo a ceremony, the essential feature of which is the drinking of " medicine " called " manyasi." This is supposd to render harmless the evils which would otherwise befall them.

789 Women are by no means so helpless when bound to their husbands as many are inclined to believe. *In some ways* wives are in a stronger 593 position than are women in lands where magic is not believed in. Luo women have many weapons in their armoury, by which they can bring their husbands into subjection, or perhaps I ought to say, something like subjection. I cannot find that these weapons are resorted to frivolously. A woman has to be hard pushed to bring them into play. One of which we hear a good deal is a curse debarring cohabitation. It is very simple in operation. Striking her thigh with her open palm, the wife vows never to cohabit again. The striking of the thigh is essential. Once this is done dire penalties, sickness of himself and children, will result if the husband attempts to force consent. The fat is now truly in the fire, and the husband has to come to terms with his wife. When he has succeeded in mollifying her " manyasi," the medicine already mentioned, is drunk to break the curse. At this 241 stage of social development a belief in magic does serve the needs of 841 women in certain circumstances. She has powers in connection with agriculture which can be devastating. For instance, during her menses no woman must sow seed. In the family of a polygamist lesser wives dare not approach the " mikayi " or chief wife to share in the labour at this time. Such contact with the seed would prejudice the crop.

3: Evans-Pritchard E-5 (1936) 1950 FL11 Luo FL11

wife dies she ought to be replaced by her sister. The counterpart to this custom of the sororate is the levirate, the raising up of seed to a dead man by one of his brothers. A widow is normally taken by one of her dead husband's brothers, though if she chooses to live with a more distant kinsman of her husband her wishes will be respected. Occasionally she is taken by one of her husband's sons by a different wife, but this is rare and although not *kwer* (forbidden) it is not encouraged because it is thought that the union will not be fruitful. When it happens, it is a young and recently married wife who is taken by the son, sometimes at the express wish of the father. Brothers are the proper mates for widows and the proper guardians of their children. It is customary to get a *jawuu*, Bantu, or *jadak*, a person outside the clan, to sleep with the widow before the brother does so, in case the husband's ghost is troublesome. The trouble will then fall on the Bantu or stranger. 587

It must be clearly understood that the taking of a widow by her dead husband's brother is not a remarriage. No bridewealth is paid, and any children the brother may beget by the widow are called after the dead husband and not after him. The dead husband is their *pater*. His brother is only their *genitor*. If they are girls, it is their brothers and not the man who begat them who receive their bridewealth. The begetter receives only the two animals due to a father's brother, one of which is referred to in these circumstances as the cow of the begetting (*dhor nyolo* or *dhor oding*). Also, one does not use the verb *kendo*, the ordinary word for marrying a wife, in reference to the widow, but *atero* or *alago*, which have the sense of taking a woman to live with her. The widow is *ci liend*, the wife of the grave, that is, the wife of her dead husband.

Law

Luo practise very extensive avoidance, as part of a general attitude of respect (*lur*), of their wife's people—whom the husband calls *kaswa* (my in-laws). If a man meets either of his parents-in-law on a path he makes a detour, and if he has to speak to them he does so with his back turned to them, especially when he speaks to his mother-in-law, who also turns her back to him. Even to-day when men wear clothes a son-in-law does not visit his mother-in-law without a strip of hide over his genitals. A man who neglects these rules is said to be *mangatek*, to have strong eyes, and he makes a gift in compensation for his negligence. A man respects the whole lineage into which he has married. He can face the younger people but not their elders. He respects also the older people of the lineage of his wife's maternal uncle, for they are also his *oret*, his in-laws. The husband's brothers respect only his parents-in-law and their immediate kin of their own generation. 606 576 [681]

When the wife has borne a child the rules of avoidance are relaxed and as the years go on and more children are born relations between a man and his parents-in-law become more informal. A ceremony is held, perhaps after the birth of the first child, to enable the husband to enter his mother-in-law's hut and partake of a meal there instead of keeping strictly to the *simbo* on his visits to her home. The wife's parents send the *jagaw* to summon him and his relatives and friends—all those whom the wife calls *kanego*, my husband's people—and when they arrive there are set before them in the mother-in-law's hut a large dish of fish, beer, melted butter, and the cooked meat of an ox killed to celebrate the occasion. They are invited to eat. The husband is silent but his brothers say that they cannot eat till they are given a goat. 606 574

Government.

643 **Chiefs as rulers.** There is no king of the country, nor is there any single paramount chief; the Bantu chiefs claim equal, if not superior, rights to the land. Certain chiefs rule over extensive districts inhabited by the Nilotics, and their rights as leaders are considered to be hereditary; they are also looked to in cases requiring settlement or legislation.

423 **Land tenure.** Land which has not been cultivated in the past may be tilled by any family; but, when once it has been tilled, the community regard it as the property of the family whose ancestor first cultivated it. Should it be left fallow for a number of years, no other family may appropriate and till it without first obtaining the original owner's permission. Few people seek such permission, preferring to dig virgin-land which will afterwards belong to their children.

621 **Local chiefs as the magistrates.** The people live in communities. They build their houses in close proximity and in most cases surround them with a growing fence, leaving a gateway which can be closed during the night or in times of danger. Such a village group is ruled by a sub-chief who 622 is under the authority of the district-chief. The chief of a village is magistrate and controls the general affairs of his people. This chief levies no taxes, but his people make him presents of goats and sheep, and of grain also at harvest time.

692 **Courts and court fees.** Any person wishing to bring a charge against another for any offence, real or imaginary, 694 pays a small fee to the chief of the village before whom he lays 695 his complaint or accusation. The chief or elder then summons the accused person and appoints a time when the case shall be heard. The chief sits with one or two village elders and gives his judgment. A person may appeal from a village chief to the principal chief in the district, and the elder who first tried the case will then go to the superior chief to be present when the case is reheard. The parties appealing have to pay fresh court-fees before the case is retried. The punish- ● 681 ment in almost every case is a fine and the amount is determined by the gravity of the case. The losing party has to

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

681 pay the fine, and from the amount the judge takes a portion for himself and passes the remainder to the successful litigant.

728 627 **Making peace between sections of the tribe.** Should there be a quarrel between two sections of the tribe and a desire be felt to end the strife, the chief of one section goes to the chief of the other with a few of his principal men, and they spend the afternoon and night together discussing the difficulty and finally coming to terms. The following day a goat is killed, some of the contents of the stomach are smeared over the chests of those present, and a little of the meat is pounded in a mortar and eaten as a sacred meal to ratify the terms of peace. As they eat the meal, they promise to live at peace, the form of oath taken being "By the dead dog."

674 789 **Theft.** Cattle lifting is the most common form of serious theft. Men seek to steal cattle from members of the same tribe living at a distance from their own district, because the animals stolen can thus be more easily secreted. A man who intends to rob a kraal first visits the place with his son in order to work magic and to make his preparations. He takes with him a number of sticks pointed and prepared for the magic, and indicates certain spots to his son, who drives a stick into the ground at each place. These are magical sticks which cast a spell upon owners of cattle. The magic is followed up at night by the man's going to the kraal, opening the gate and driving away the cattle while the people are sleeping. Should the animals make any noise or prove stubborn and refuse to leave the kraal, it is a sign that the owners have received some intimation of the intended theft and have taken precautions to make more potent magic to frustrate the robbery. Under [685] such circumstances the cattle-lifter beats a hasty retreat before he is discovered and captured, as he knows that he will receive no quarter, but will certainly be put to death.

Chiefs possessing large herds of cattle take the precaution to keep a supply of powerful medicine over the gateway leading into the kraal, and also place it in various parts of the kraal so that, when a thief enters the kraal, he loses his strength, is unable to walk and so is captured and put to 554 death. A successful cattle-lifter soon becomes a noted man

economic activities and although, formerly, there were organised hunts, today hunting is not much practised. 105

LUO EXPANSION

Until the time of European intervention the Luo appear to have been gradually expanding towards the south. This resulted in their division into two parts (on the north and south of the Kavirondo Gulf) namely: the Luo of Central Kavirondo and the Luo of Southern Kavirondo. Evans-Pritchard writes, "The southwards migration seems to have been across the Gulf from Uyoma and Asembo to Karacuonyo, and not round it, and to have taken place over several generations, commencing, if genealogies are to be trusted, about seven generations ago. Across the Gulf the Luo came up against the Bantu (Kavirondo) and Nilo-Hamitic (Langu) tribes."(1) The assimilation and absorption of these tribes was incomplete at the time of European occupation of the country. During this process of expansion there was a considerable dispersal of lineages so that lineages of the same clan are found in both Central and South Kavirondo. The Luo tribes least influenced by the Bantu are the Uyoma, Sakwa and Asembo and such tribes as pushed the southernmost Luo into Bantu country. 174

SOCIAL ORGANISATION AND POLITICAL STRUCTURE

At the present time Luoland is divided into a number of administrative locations which vary considerably in area and population. These locations, according to Evans-Pritchard, correspond approximately to the old tribal areas of the Luo. The expansion of the Luo has divided them into two main groups with Kisumu location forming a narrow territorial link between them: 631 101

1. The Luo of Central Kavirondo, known as *Joiye* (the inside people).

2. The Luo of Southern Kavirondo, known as *Jooko* (the outside people).(2)

THE TRIBE *(Piny)*

Among the Luo the tribe is an autonomous political unit. Like the Nuer tribes it may be defined in terms of the way in which homicide was formerly regarded and treated. 619 682

Compensation for homicide *(cut)* takes the form of handing over cattle, or a girl, to the kinsmen of a slain man so that heirs may be raised for him. Compensation is only paid for the killing of a tribesman, for men of other tribes, slain in war, raids or private conflict, are regarded as *wasiga*, enemies. On the other hand, compensation is not paid for killing a clansman, for such a deed is regarded as a sin, and propitiation and atonement have to be made by the sacrifice of an ox provided by the inme-

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1949, No.VII, p.2.
(2) *Ibid.*

619 diate kin of the slayer, and eaten by representatives of the entire clan. It might, however, be insisted on that the slayer should marry a wife in
682 the name of the dead clansman and raise heirs to him. Strangers having close kinship links with a dominant clan, may refuse to pay compensation, and they tend to regard killing as a sin, since the acceptance of compensation for homicide emphasised a distinction they are anxious to obliterate.(1) A Luo tribe can be defined as a unit in which compensation for homicide is paid, or in which there is provision for payment and the settlement of the feud.

The Tero Buru

619 Luo tribes were formerly separated from each other by the *thim* - a
766 stretch of bush country left unoccupied. Between segments of the same tribe there was no *thim*. The ritual demonstration of *tero buru* took place across these boundaries. It was the custom of the Luo in the past not to bury an important man, known for his wealth or for his military ability, until the whole tribe, or a large part of it, had crossed the *thim* and demonstrated in front of the homesteads of the neighbouring tribe. The demonstration took the form of insults, challenges to fight and the tempting parade of cattle. It was a matter of honour for the challenging party to stand their ground and defend their herds with their lives. Such demonstrations were also made against neighbouring Bantu who had a similar structure to that of the Luo tribes. The demonstrating party was not usually attacked unless two *buru* parties of opposing tribes met. Sometimes, however, the opportunity was taken to try and raid the cattle of the neighbouring tribe.

619 Payment of compensation and the *tero buru* are the two main indications of tribal separation. In addition there is the association of a specific lineage unit with a tribe.

CLANS AND LINEAGES

613 Each Luo tribe has a dominant clan or lineage. The clan *(dho-ot)*,
614 has a lineage structure and lineages are differentiated by adding to the name of the clan or larger lineage an and the individual name of the smaller branch. Formerly, the clans were exogamous but today the larger clans are not always so. Within the large clans maximal lineages can intermarry when the distance between them has become great enough.

836 Where the separation between two lineages has not proceeded far enough or where two clans are closely related there is a socially recognised form of love-making called *codo*, which takes place between the young men and girls of both groups. Marriage is not permitted until the
582 separation has proceeded further. After some generations the less ap-
583 proved type of marriage *(por)* may be permitted. This is marriage by abduction and it is eventually replaced by the ordinary form *(aeko)* when the complete separation and distinctiveness of the units is recognised.(2)

582 A man is forbidden to marry a women who is a *wat*, a cognatic relative.

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1949, No.VII, p.4.
(2) *Ibid.*, p.7.

FL11 Luo FL11

3

Each Luo tribe (*piny*), coterminus in the main, as has been said, with the present administrative location, was an autonomous political unit. As among the Nuer, one of the chief characteristics of a Luo tribe, and one by which its autonomy may be defined, is to be found in the different ways in which homicide was regarded and treated in pre-European days. There were local variations but in general the principle followed was that *cut*, compensation (a girl or cattle for a kinsman of the slain man to marry a wife with and raise heirs to his name,) was paid only for the killing of a fellow tribesman. No *cut* was paid for killing men of another tribe in war, raids, or as an outcome of the ritual demonstration called *buru*, [1] for they were *wasigu*, enemies, and a state of feud between the lineages involved, and sometimes of war between the two tribes, developed. Likewise no compensation could be paid for slaying a clansman, but atonement was made by the sacrifice of an ox, provided by the kin of the slayer and eaten by representatives of the whole clan, who might moreover insist on the slayer marrying a wife to the name of the dead man. The line of political cleavage between tribe and tribe thus ran through the points at which the obligation to pay compensation or make atonement for homicides ended for a particular group of people and it is so regarded by the Luo themselves. For example, when the Uyoma people and the Asembo people lived in the same territory they paid compensation for homicide between them but when they separated they ceased to pay it.

In tribes in which the tribesmen, except for some small lineages of strangers (*jodak*) intermingled with the dominant clan, are all members of the same clan, such as Karacuonyo tribe, compensation for homicide was not, or was rarely, paid, because the strangers had close kinship links with the dominant clan and would, I was told, have refused compensation in cattle, though they might have accepted a girl, since had they done so they would have emphasized a distinction they were anxious to obliterate. It was only in tribes in which there were beside the dominant clan other powerful lineages occupying their own lands within the tribal territory, as the Jokakan and Kaluo in Alego, that *cut* was paid regularly for homicide and could be enforced by appeal to arms. In other words, where there was considerable political cohesion, expressed in terms of clanship, the killing of a man was treated as a sin; where there were marked sectional interests within the political unit of the tribe it was treated as a tort; and where there were social links but political separateness it was treated, unless it was a wanton act of individual homicide, as provocation to a feud but without moral disapproval or means of legal settlement.

The political boundary, which in its moral dimension signified a balanced hostility between adjacent tribal groups, had its material expression in the *thim*. The *thim* was a stretch of bush country, the home of buffalo,

[1] If a man of one tribe killed a man of a different tribe in a personal quarrel, and not in war raiding, feud, or ritual demonstration, he might pay compensation in cattle, e.g. if a Karacuonyo man killed for some private reason a Kocia man who was taking cattle to his in-laws in Karacuonyo territory.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief. 554

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen. 685 791 787

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage. 684 837 586 836

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members 787 695 682 783

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

lineage of the murdered man endeavoured to kill a member of the murderer's lineage in revenge. But the family of the murderer could forestall this process by offering a girl or twelve head of cattle in compensation. If wilful murder occurs between segments within the same maximal lineage, fighting may again occur and a member of the murderer's segment be killed in revenge. Here it is impossible for a girl of the group to be offered in compensation since she would be of the same maximal lineage and exogamous group as the murdered man, and could not be married by any kinsman of his. But the senior elder recognized by both segments calls a council representative of both, and the murderer, if judged guilty, is supposed to be exiled. When a man kills a close relative, belonging to his own minimal class A segment of the maximal lineage, it is *masira*—a ritual offence.[1] The murderer must bury his relative and stay by the grave until *chola* (the first mourning period) is finished. He must cohabit with the dead man's wife, if she has borne no children to her husband, so that she may bear a child to be named after the dead and to guard his homestead.[2]

The level of groups between which marriage can take place thus corresponds to the level at which general relations cease to be those prescribed between kinsmen, and the groups with which marriage is possible tend to be those between which hostility is the usual attitude. The Luo recognize this correlation, and regard *oche* (in-laws) and *wasigu* (enemies) as almost interchangeable terms.

The normal form of marriage is negotiated by go-betweens on behalf of bride and bridegroom with their respective families. A transfer of cattle has to be made to the bride's family, the normal number being twelve. When the two families are agreed as to the suitability of the match, the groom arranges for a party of his friends to drag the bride from her home. The bride is expected to make a show of resistance and weeping, but it is significant that the dragging must not take place when the bride's parents are absent from the homestead. After the bride is thus brought to the *simba* of the groom, the latter deflowers her in the presence of married men and women witnesses; the tokens of her virginity are placed on potsherds and paraded in triumph to the bride's home the next day and a feast is held there. If the bride fails to prove her virginity in this way no feast is held, and one head of cattle less is paid to her family. The real commencement of a marriage is said to be the groom's sending of *roch kade* (the 'heifer of the stick'), which goes to the bride's mother, and a bull to her father. Then comes the main payment, varying according to the wealth of the two parties and to the general level of Luo wealth in cattle at the time, but usually eight upwards. After this bride and groom live together for some time in the latter's *simba*, and then the bride gets permission to return to her own home. The groom goes there with a heifer and a bull, and the feast of *kisera* is held. This completes the statutory twelve cattle of the bridewealth. Bride and groom then return

[1] Some statistics of actual cases would be required to discover how far the level of segment within which murder is treated in this way coincides with that within which widows of kinsmen may be inherited and assistance given in marriage payments. My stay was too short for the collection of such statistics, but my impression was that such a coincidence is very vague, and it is certainly not consciously present in the minds of the Luo.

[2] Cf. Evans-Pritchard, *Some Aspects of Marriage and the Family among the Nuer*, pp. 5–10. Despite its importance among the Nuer, the obligation of ghost marriage is far from universal among Nilotic peoples. Among the Luo-speaking group it is not practised by the Kenya Luo nor by the Alur nor, probably, the Acoli.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

goals which have been carefully weighed and assessed as to the possible supernatural and social consequences. The Joluo believe that a goal does not justify the means if the means require violence, unless all methods of arbitration, conciliation, appeal to authority, both temporal and supernatural, have been tried and proved to be unsuccessful or inadequate.

Violence requires cleansing—physical and spiritual cleansing of the most exacting nature—to avoid the supernatural consequences (*chira*) which violence may bring in its wake. One case has been recorded which contains an excellent description of the ceremonial and ritual cleansing thought to be essential after a murder. This particular murder was planned and executed by a group which, after years of thought and effort to resolve the conflict without violence, finally resorted to murder. Obviously, with the coming of the European, other factors were involved to escape detection for an act which in the old days would have given the group high status within its own community and which would have created feuds or precipitated a war that ultimately would have been resolved by blood compensation or schism of the political unit and migration by the weakest group.

Violence which arises immediately and unpremeditatively from quarrels, drinking, infidelity, sex, marital tensions, or family differences, and which results in a death, is not regarded in the same way as predetermined action decided upon as a last resort. Ceremonial cleansing is still necessary but does not take the extreme form because these acts are regarded by the Luo as bringing consequences which affect the individual only, that is *kwer*, and not *chira*, which affects the group, clan, or tribe as a whole. Fortunately British law makes a similar distinction: that between murder and manslaughter. It will be found therefore that the majority of cases involving Joluo which have come before the courts of Kenya as murder cases are resolved and punished as cases of manslaughter. The Joluo do not, however, understand why many of those convicted un-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

der the head of manslaughter should be punished at all. They feel that a person who makes the mistake of killing in anger is or has been or will eventually be punished by the ancestors, God, the elements, by illness, bad luck, misfortune, or the like, in the inevitable nature of things.

It is believed that cold-blooded, premeditated murder brings *chira* to the group and is therefore punished by the tribe or by the segment affected. The group or the individual who took what they regarded as this calculated risk was eventually banished from the tribe or if large and strong enough to dominate the political unit to which the deceased belonged could force his supporters, usually his segment of the clan, to break away and leave the area. Luo kinship describes all members of the clan in the same genealogical generation as brothers; fratricide, therefore, has a very wide range.

Luo clans occupy and are identified with a geographical area. The clan and the area it occupies are usually called after the eponym of the tribe. Those living within a clan or tribal area who are not members of the clan or tribe are regarded as squatters (*jodak*) with limited rights. They may be unrelated squatters, but most often are found to be affines of legitimate clan members. Murder committed by such persons invokes immediate counteraction on the part of those who belong to the land by virtue of descent, *jogweng*. Cattle could be taken by force, the culprit banished or killed, and/or a woman from that group married by a member of the dead man's minimal lineage, his *jokakwaro*, to raise seed unto the dead man's name. This woman would be regarded as the wife of the dead man, her children would placate his ghost as father (*wuoro*), the physical father would merely serve as genitor.

One major clan, *Kakia*, of a powerful tribe, the Seme of Central Nyanza, descended from a woman of this type—but then not exactly of this type: what happened was as follows. A *jadak*, living in the clan area of Seme, killed the son of an important elder of the tribe. He fled to his own tribal land to

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

avoid the immediate consequences and as a result war broke out between the people of Seme and the people of his tribe, Ugenya. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It is, to my knowledge, the only clan in Luo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Joluo attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Joluo had developed several devices to deal with cases of homicide. A wife could be married in the name of a murdered youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was deflowered by a stranger (*jokawiny*)

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 the murdered man, to mourn his death, to placate his spirit,
768 and to retain the grey ash medicine left over from the first
769 cleansing to be used when necessary to remove the danger of his ghost returning to harm members of the clan. An old woman past child bearing, *pim*, was selected and agreed to perform these functions. She was given animals for this service and a hut was built for her outside the village, where she placated the spirit of the dead man.

159 Most Joluo will agree that when a witch is killed, the dead
● 682 man's relatives do not take legal action but try to cover up the
754 incident. This is not difficult in Luo society. One case did, however, occur during the period of this study which could not be hidden from the authorities.

Case No. 2.

A youth of seventeen was escorting his sister from a marriage ceremony back to their village some miles away. It was late at night or early in the morning, time could not accurately be assessed, when suddenly an apparition appeared in the path of the couple. It was a naked man—swerving, jumping, screaming, and brandishing fire which glowed red as he waved his arms. The night was very dark and to the young couple the apparition appeared as a ghost. The woman fled the way she had come but the youth in his frantic effort to escape stumbled and fell. The "ghost" was on top of him instantly, clawing at his face and throat. The youth had a sheath knife in his belt and frantically struck out blindly several times as he managed to struggle free. He fled back to the village from which he came. A party of youths and men armed themselves and set out to search for and kill the witch but were unable to find the exact spot in the darkness.

159 Next morning a body was found, naked, and with several
682 stab wounds on it. The man was identified, and the finder,

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

ignorant of the previous night's events, notified the police. Thus the story was out.

The Joluo were concerned that the youth should have been arrested and charged with murder. He was acquitted after trial on the grounds of self-defense, but the opinion remained that he should have had praise and not have suffered the indignity of being held in custody which, to the unsophisticated, was punishment and prison.

The Joluo discipline wives and children, when it is thought necessary, by beating and kicking. One or two cases each year come to the courts as a result of excessive force resulting in the death of a victim of discipline. Out of 46 cases between 1949 and 1954, 10 were of this type.

The largest number of murder cases today arises from drunken quarrels during beer parties. Native beer does not have a high alcoholic content, but a beer-drink often begins at mid-morning and continues well into the night and, on special occasions, until the next day. The quantity consumed therefore frequently produces an acute state of drunkenness. Of the 46 cases, no fewer than 12 can be classified as the result of excessive beer drinking. These cases, without exception, were finally treated by the courts as manslaughter.

Family quarrels, often over bride-wealth payments, account for a few cases every year. A typical case of this type is as follows.

Case No. 3.

In 1949, the Accused caught his wife in the act of adultery with an acquaintance. The wife returned to her father's village, as is the custom in such cases, and made several efforts to elope with her lover. On each occasion, her brothers forcefully restrained her and threatened her lover with a severe beating or death, should he attempt to elope with their sister. After several weeks of argument and numerous meetings of the eld-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 ers of the clans involved in the case, the husband went to the
628 village of his wife and took ten head of cattle by force from
684 her father's herd. This action is approved in customary law after the elders have met and discussed the matter and are unable to resolve it by any other method.

Naturally the brothers of the girl were extremely angry that their sister should have behaved in this way that meant the loss of animals which they, no doubt, had planned to use for their own bride-wealth. The girl remained unrepentant and troublesome. She stated that she was determined to return to her former husband's village to collect her clothes, and that she would leave her brothers and her former husband in order to join her lover. Her brothers followed her to the village of her former husband and there began to quarrel. Her former husband joined the group, and the three decided to teach this woman a lesson. They beat her with sticks until she was dead.

● [682] The court took a lenient view and decided that their intention was not to kill the woman but merely to discipline her, and each of the Accused was sentenced to six months hard labor for manslaughter.

The next case also arose out of bride-wealth.

Case No. 4.

159 In 1949, a woman left her husband to live with her lover.
684 Her husband tried through indigenous and legal channels to
583 get his bride-wealth returned. The woman's father, however, had used the animals and could not return them, although he was sympathetic. The husband, therefore, was left with only one course, to demand the return of his wife. To this end, he went to the village of her lover and threatened him. They began to quarrel and to fight. Each was armed, the lover with a spear and the Accused, the husband, with a *panga* and a knife. The lover was killed and the husband charged with murder.

159 In this case, the court decided that this was manslaughter,
682

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

and the Accused was sentenced to three years' hard labor. The sequel to the case is that the wife was repentant and returned to the village of her husband and was there to welcome him on his return from prison.

Polygamy is the desired goal in marriage in Luo society. The word for co-wife in the Luo language is *nyieko*, which also means jealousy of an intense kind. The jealousy between co-wives occasionally ends in quarrels which result in the murder of one or the other.

Case No. 5.

A quarrel developed between the senior and most junior wife, when the latter accused the former of trying to poison her child. Her child was an adopted child, being a child of the deceased second wife of their common husband. When a woman dies, it is customary for the husband to decide which of his wives should act as foster mother to her children. This quarrel began because the senior wife had demanded custody of the child but the husband decided to place the child in the care of the junior wife, who had no sons. The argument went on for years. The child became ill and the junior wife was convinced that he was poisoned by the senior wife. A quarrel developed and the junior wife, who had just returned from the fields with a *panga* in her hands, struck the senior wife, killing her instantly.

Again the court decided that this was a case of manslaughter, and the accused was sentenced to four years' hard labor.

The Joluo people have a custom at marriages of "pulling the girl" to the village of the groom. Traditionally, the brothers and friends of the girl should resist this "capture." In fact, however, the marriage has been arranged by them and both parties are fully aware that this is a mock battle. On occasion these fights become a spirited and serious "free for all." From time to time, therefore, one or more of the party is seriously

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

583 injured and not infrequently death results. Indigenously the
●682 method of resolving this situation is to cancel the arrangements of the wedding which was to have taken place and to continue these arrangements to marry a girl to the dead man. If the dead man is from the party of the prospective groom, the girl is married to his name. If the death has occurred among the relatives or friends of the girl, then a bride is chosen from the relatives of her prospective husband to marry in the name of the dead man. Whenever possible, this custom is followed today. The authorities, however, naturally prosecute in cases of this kind. The result is usually manslaughter, and the sentence is a light one.

682 There are cases in which it is difficult to determine whether the death was caused intentionally or accidentally. For example: a food which is now becoming increasingly used is the
[262] cassava root, and raw cassava contains cyanogenic glucoside which, when acidified by gastric fluid, forms hydrogen cyanide and is therefore a virulent poison in this form. Adequate cooking destroys this poisonous principle, and most Luo women clearly understand this. Therefore, when the death occurred of a child who had consumed cassava which had been prepared and given by a co-wife, its mother's suspicion was immediately aroused. She accused the co-wife of giving the poison intentionally. It is very difficult, however, to prove, as in the case mentioned, that death was caused intentionally and not accidentally by the ignorance of the co-wife. The case was dismissed by the court.

586 The sequel, however, was that the husband did not accept the explanation of ignorance and divorced the woman because, as he stated, "there would never be peace in my village. It is obvious what this witch has done and although she has been a good wife to me, she has broken my village and killed my child. I therefore will divorce her and get my cattle back to marry some woman who is not a witch."

754 in order to kill him. If a person is thought to be bewitched, the medicine
[683] man concerned is caught and forced to remove the spell, afterwards being
punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkingo." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a
695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

787 As regards *omens*: If a bird sings on the left-hand side as a man
777 is starting on a journey, the journey, if for war, will be unlucky; but if it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that
787 is likewise a bad sign. They profess to be able to foretell events by *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad prophesied the coming of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 On the occasion of a *birth* the infant, if a boy, is kept inside the house
[844] for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

19:Wilson E-5 (ca. 1950)' 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *povo bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

the ear of father, mother and child. But 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(bwanyo wich)*. The feast is prepared much like for a babe-boy, but there is no *awinja*, and the performance with the ladle does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere. 852

If the husband has more wives, he is not entitled to conjugal rights with any of them until after the birth of a child the feast has taken place, and he has slept again with the mother of the child. If he would brake this rule, the new-born babe would waste away and die *(omiyo nyathi chira)*. 846 834

Adultery is reckoned a serious offence by both husband and wife. If the woman knows that her husband is misbehaving in this way, she will refuse cohabitation, for if she is with a child cohabitations would result in a miscarriage. If a woman commits adultery her husband may send her away, and claim the dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her. 837 834 684 ● 848

A widow is given in marriage to the full brother or the nearest relation of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she begets children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence, when the girls born to them grow up and get married, the real brother of deceased husband will receive the full dowry paid for them minus one cow for each girl, which cow goes to the real father of the girl for bringing her up. 587

When the boys born by them grow up and get married they will leave the kraal and build their own apart, unless their real father helps them to get married by paying the dowry. [591]

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days; not even for nature's call. A hole is dug in the floor of the hut, and an old bottomless cooking pot is put over it, and this is used as a W. C. During those 20 days new beer is brewn. When the time has elapsed and the beer is ready, a bull is killed and its hide is dried for the parents of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or migosi)* mixed with water in a small vessel. She dips her finger in it and 945 852 [514] [273]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

ignorant of the previous night's events, notified the police. Thus the story was out. 159 682

The Joluo were concerned that the youth should have been arrested and charged with murder. He was acquitted after trial on the grounds of self-defense, but the opinion remained that he should have had praise and not have suffered the indignity of being held in custody which, to the unsophisticated, was punishment and prison.

The Joluo discipline wives and children, when it is thought necessary, by beating and kicking. One or two cases each year come to the courts as a result of excessive force resulting in the death of a victim of discipline. Out of 46 cases between 1949 and 1954, 10 were of this type. 593 861 682

The largest number of murder cases today arises from drunken quarrels during beer parties. Native beer does not have a high alcoholic content, but a beer-drink often begins at mid-morning and continues well into the night and, on special occasions, until the next day. The quantity consumed therefore frequently produces an acute state of drunkenness. Of the 46 cases, no fewer than 12 can be classified as the result of excessive beer drinking. These cases, without exception, were finally treated by the courts as manslaughter. 682 273

Family quarrels, often over bride-wealth payments, account for a few cases every year. A typical case of this type is as follows. 159 628 684

Case No. 3.

In 1949, the Accused caught his wife in the act of adultery with an acquaintance. The wife returned to her father's village, as is the custom in such cases, and made several efforts to elope with her lover. On each occasion, her brothers forcefully restrained her and threatened her lover with a severe beating or death, should he attempt to elope with their sister. After several weeks of argument and numerous meetings of the eld-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 ers of the clans involved in the case, the husband went to the
628 village of his wife and took ten head of cattle by force from
684 her father's herd. This action is approved in customary law after the elders have met and discussed the matter and are unable to resolve it by any other method.

Naturally the brothers of the girl were extremely angry that their sister should have behaved in this way that meant the loss of animals which they, no doubt, had planned to use for their own bride-wealth. The girl remained unrepentant and troublesome. She stated that she was determined to return to her former husband's village to collect her clothes, and that she would leave her brothers and her former husband in order to join her lover. Her brothers followed her to the village of her former husband and there began to quarrel. Her former husband joined the group, and the three decided to teach this woman a lesson. They beat her with sticks until she was dead.

[682] The court took a lenient view and decided that their intention was not to kill the woman but merely to discipline her, and each of the Accused was sentenced to six months hard labor for manslaughter.

The next case also arose out of bride-wealth.

Case No. 4.

159 In 1949, a woman left her husband to live with her lover.
684 Her husband tried through indigenous and legal channels to
583 get his bride-wealth returned. The woman's father, however, had used the animals and could not return them, although he was sympathetic. The husband, therefore, was left with only one course, to demand the return of his wife. To this end, he went to the village of her lover and threatened him. They began to quarrel and to fight. Each was armed, the lover with a spear and the Accused, the husband, with a *panga* and a knife. The lover was killed and the husband charged with murder.

159 In this case, the court decided that this was manslaughter,
682

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 553 was given his name reveals their attempt to avoid the consequences of his act.

762 159 684 [178] The second case arises from a breach of customary law which in the old days would have meant banishment but which today brings social ostracism.

Suicide Case No. 2.

The suicide was caught in the act of intercourse with his full brother's wife. The Luo believe that such an act involving members of the same *Jokamio* (that is, those descended from the same mother or grandmother) brings *chira* to the whole clan. The security and solidarity of family relationships are [578] threatened by the act because it involves quarrels which may lead to violence within the primary segment of the clan. In this case the brother did not tell the elders of the clan but merely threatened to do so. The guilty man returned to his own homestead and hanged himself in his hut. The house was destroyed [783] and members of the extended family were cleansed by the *jabilo*. The cleansing ceremony took the same form as in the first case, with the addition that the village was sprinkled with medicine in order that it might continue to be used by the dead man's family.

In the next case there are two clear motives which led to the suicide. The first, perhaps the most important, lies in indigenous beliefs and attitudes, while the second lies in more modern attitudes.

Suicide Case No. 3.

159 762 556 [661] This Luo was about 30 years old and had been employed as a driver for the Government for many years. Drivers in Kenya receive a relatively high salary, and in addition some take advantage of their position and make extra money by illegally charging people for transportation. Through these activities, he became a relatively rich man and was able to marry a total of five wives at his comparatively young age. He was also wealthy

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

Suicide Case No. 4.

762 159 584 A young lad aged about 23 years was being married to a girl from a neighboring location. He had paid a portion of bride-wealth and many of the early ceremonies had been performed. His bride had returned to her home as is the custom until he had paid the remainder of the bride-wealth. He went to his father-in-law to discuss the last and final payment, with his *jagam* as witness, and the father-in-law agreed that a milch cow would complete the payment. He returned in high spirits to the home of his father and asked for the cow, stating that this was all the father-in-law demanded. His father told him that if he had not paid enough, then the father-in-law must be a bad man and the girl was not worth having. The father and the son quarreled, and during the quarrel the son threatened suicide if he did not get the animal. The next day the son took a cow by force, while his father was absent, and sent it off to his father-in-law by a group of herd boys. When the father returned, he was furious at what his son had done and went after the cow himself. He caught up with the boys and brought the cow back to the village.

159 762 The son had warned his father that, if he should take this course, he would hang himself, and, as he saw the father returning in the distance, he hanged himself from a tree which stood just outside his father's village. This tree, as is the custom, was completely uprooted and destroyed.

762 159 684 The next cases are two which were due to modern circumstances but which in a sense involve the loss of status and therefore brought shame to the individual.

Suicide Case No. 5.

A young man eloped with the wife of a Kikuyu in Nairobi, far from his homeland. Whereas in Luo customary law to run off with the wife of another man is not considered to be particularly serious, in Kikuyu customary law it is regarded as

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762
159
684

a criminal offense. He was caught, and the Court fined him a relatively large sum of money and gave him thirty days in which to pay. He became very depressed and, after unsuccessful attempts to raise the money, he hanged himself.

Suicide Case No. 6.

159
762
685

The man involved was in his early thirties, and was in a position of trust with a Local Government body in Nyanza Province. He was alleged to have abused his position of trust by embezzling a considerable sum of money. The auditors had come across this defalcation in the books and brought it to his attention, but before he was arrested he killed himself by falling on a knife. Both the cause and the method can be said to be modern.

159
762

Case numbers seven and eight involve a loss of status, but on the other hand are attributable to poverty.

Suicide Case No. 7.

[888]
[626]

An old man whose wives had all died had to depend on his sons for support. The sons supported the old man while in his village but, after a quarrel, built a new village of their own and refused to build a house for him. As he had no one to support him and as he felt that he was ostracized by his sons, he had, to quote the Luo elders, "No other recourse than to commit suicide. His sons killed him and will suffer." He hanged himself on a thick tree which grew by a river, where he was found by an ex-chief. The Luo elders were quick to point out that he achieved his revenge, because the descendants of his sons were already few in number and mostly girls. "The line will die out because they killed him."

Suicide Case No. 8.

The man in this case was a widower living with his only son, who gave him food, but could not afford to maintain the ap-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 the village, she would be teased and chided pleasantly about
159 the fact that he was her future husband. Perhaps she would
584 have been married sooner, had her future husband, Opala, not been employed in a city many hundreds of miles away. He returned on his long leave to consummate the marriage at the time when the girl had just finished her secondary education and was about 18 years of age.

While at school, however, Akech had fallen in love with a teacher, Okare, in a neighboring technical school and he was determined to marry her. He went to her father and pleaded to be allowed to repay the bride-wealth animals her father had received years before and to complete the bride-wealth payments to marry the girl by Luo law and custom. Opio adamantly refused, and her brothers threatened Okare with physical violence if he should try to see the girl again. Okare was heartbroken and returned to his place of employment. Akech, however, had other ideas. When she was told that the date of her wedding had been fixed, she pleaded and tried every traditional way of breaking the marriage, but was unsuccessful. Her father and her prospective husband remained adamant.[3]

159 The night before the wedding, she ran away from home to
762 join Okare at his place of employment. Both knew that they
584 would be pursued by the girl's brothers and by her father, so they hired a car and fled to the boy's village in a distant Luo
● 684 tribe, some 200 miles away. Her father, brothers and future husband pursued the lovers to Okare's village where the father had him arrested for taking Akech from his custody. Okare's brothers, however, took the girl to Nairobi to hide her pending the result of the case. One of the brothers was then arrested for aiding and abetting the elopement.

Now the essence of this case goes to show that the father

[842] [3] By tradition, a girl may run off to the home of a "bride," thus to marry will produce sterility. She may climb a tree *bondo*, an *euphorbia*, which is believed to be closely associated with the ancestors. There are several other ways, all of which would cancel an ordinary wedding, but none is effective in the case of *nyar kiseke*.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

wanted the best of two worlds. Traditionally, elopement (*por*) is justified and is legal, albeit more difficult in cases of *nyar kiseke*, providing that the young man has stated his willingness to pay bride-wealth and has been refused. Moreover, it is the last remaining traditional way by which a young woman, forced to marry against her will, is able to break the arrangement. Today, however, because there are so many illegal unions, the African courts take a serious view of young men and women running off to the towns without the slightest intention of paying bride-wealth.

While Okare and his brother were retained in gaol, pending the case, the girl's father and her brothers went to Nairobi, where they found the girl after some difficulty and took her back to her village by force. There they married her to Opala and he, with two of her brothers, took her by force to the place of his employment which was in another territory nearly 700 miles away.

Opio, who was an influential man in his district, then proceeded with the case against Okare and his brother. The Court decided in favor of Opio, ordered compensation for the expenses he had incurred securing the return of his daughter. Okare and his brother were heavily fined for having taken the girl from the protection of her father. The compensation and the fine amounted to a very large sum of money and the boy appealed to the District Officer's Court. Pending the Appeal, he went to search for new employment at Nairobi. Akech, in the meantime, had arrived at the home of her husband in the far away city, only to find that he was already married and that his first wife, as a Christian, refused to have her in her home. Quarrels and arguments began in earnest, with the result that Opala had no alternative but to send the girl back to her father and to demand a divorce. Akech, however, did not go home but returned to Nairobi to Okare.

The father heard what had happened and, in the shame and humiliation, hanged himself in a classroom at the school

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

from the fear of consequences arising from the behavior of her son and, in two cases, there was a suspicion that the women did not in fact commit suicide, but were murdered by their husbands in such a way that it looked as if they had committed suicide. 762

Suicide Case No. 11.

A young woman was accused by her husband at a beer party of having slipped quietly out for intercourse with a man from the village. To prove that she was innocent, she hanged herself on a tree which was near the homestead. If she had been guilty, the Joluo argue, "she could have been cleansed, but she could not be cleansed for having done nothing." 762 159 684 783

Suicide Case No. 12.

A young wife, newly married, had offended her husband in some way and he refused to eat her food. (This is a customary curse and is a very severe punishment to a wife.) She threatened to kill herself if he did not eat it. He then took the food to the senior wife, who ate it, adding insult to the injury already done. The young wife went to her hut where she stood on her grinding stone and hanged herself from the roof. 762 159 578

The elders were quick to point out in this instance that since her death the village had been abandoned and many children of the lineage had died. All this, they believe, was caused by the ghost of the abused wife. 762 159

The third case involved a young girl who committed suicide because she did not wish to marry the person chosen for her by her parents. 762 159 584

Suicide Case No. 13.

A very young girl, little more than a child, objected in the traditional way to the union which her parents had arranged.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

source of much social rejoicing to discover that a married woman had been found to be a virgin. Such a bride was given a high prestige among the other women. In the past, if a woman gave birth to an illegitimate child, her only chance of marriage was to an old man with a number of wives. There was no possibility of occupying the position of chief wife of the family; and the heads of cattle paid were much fewer. The child was taken by the man who legally married her, but she was not allowed to give birth in her own home. Everything was done to get rid of her as soon as possible.

Examples of such pregnancies are very common at present. But although social disapproval is still keenly felt, modern conditions have become more favourable to women in this situation, and an increasing number of them are being married to bachelors. Unlike some communities, no death punishment was ever given. If the occurrence takes place between close relatives the matter is kept secret; in the past, however, the couple could be exiled.

Modern Education and Adolescent Girls

Progress in the education of adolescent girls is hampered because the Luo people do not appreciate its suitability to the environment of their women. To the majority, modern education is associated with clerical work and the many other jobs that men take up after a school career. The position of girls in this scheme is not clearly envisaged.

The social importance attached to marriage is having to adapt itself to a prolonged school career and the raised age for marriage which this implies. An inability to appreciate schooling for girls is also based on a high esteem for the traditional education which it tends to interrupt and weaken.

241 136 857 life of the countryside. Ofttimes the boys are armed with slings from which stones are projected at random into the midst of the crop, or into the midst of a flock of birds as they rise. One of the reasons why the Luo denude the land of trees is because they give harbourage to their bird enemies.

241 136 789 They are wise to insect pests also, and have a greater belief in their remedies than many a farmer has in the aids supplied by our civilization. The medicine is called by two names, " yadh miri " or " yadh lisese." It is employed against a small red and black beetle, called by the Luo " Nyanginja " which eats the flower of the millet, thus preventing a crop. The medicine man who prepares it must be a man of peaceable disposition and character, not a quarreller or disputer with his neighbours. The whole success of the medicine depends on the absence of disputation and quarrelling, and of the grosser forms of vice, like adultery. No adulterer may be supplied [837] with the medicine, for his very handling of it would nullify its usefulness, not only for himself, but also for his neighbours. All must be peace in the community until the harvest is reaped. Unlike other medicines, which are tied to a pole and left to work their influence, " yadh miri " is made into a decoction, which is sprinkled over the growing crop at eventide. I have seen the operation at a place called Maranda in Sakwa, Central Kavirondo. It was then being used against maize borer. At a time when this pest was giving a good deal of trouble to European farmers, I heard a man who was back in the Reserve on leave from a farm in the Kitale district, pour scorn on the methods used by Europeans with various sprays. He was by way of being one of the more progressive men, but he had nothing but absolute faith in the efficacy of " yadh miri."

578 685 Crops damaged by domestic stock gave rise to many an angry passion. The owner of the crop had liberty to chastise personally the herdboy (or man) through whose carelessness the stock were left untended. If the herd were a lad he could be cuffed and thumped without being able to proceed against the assailant. Nor did the father protest, provided the chastisement were in reason, for he knew that his son had rendered him liable to a claim for compensation. As likely as not he would add his own quota to the punishment already meted out. If the owner feared that he would get the worst of it in a personal encounter with a herdsman, then he had his remedy at law.

241 When the crop is ready for harvesting it is the duty of the men to do the reaping. In the case of millet, this is a laborious business, calling for judgment, for not all the heads would be ripe, and some must be left to ripen after the bulk has been reaped. It is the task [462 857] of the women and children to pack the crop into the grain baskets and carry it to the grain stores. In the case of millet it is quite

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

681 pay the fine, and from the amount the judge takes a portion for himself and passes the remainder to the successful litigant.

728 **Making peace between sections of the tribe.** Should there be a quarrel between two sections of the tribe and a desire be
627 felt to end the strife, the chief of one section goes to the chief of the other with a few of his principal men, and they spend the afternoon and night together discussing the difficulty and finally coming to terms. The following day a goat is killed, some of the contents of the stomach are smeared over the chests of those present, and a little of the meat is pounded in a mortar and eaten as a sacred meal to ratify the terms of peace. As they eat the meal, they promise to live at peace, the form of oath taken being "By the dead dog."

674 **Theft.** Cattle lifting is the most common form of serious
789 theft. Men seek to steal cattle from members of the same tribe living at a distance from their own district, because the animals stolen can thus be more easily secreted. A man who intends to rob a kraal first visits the place with his son in order to work magic and to make his preparations. He takes with him a number of sticks pointed and prepared for the magic, and indicates certain spots to his son, who drives a stick into the ground at each place. These are magical sticks which cast a spell upon owners of cattle. The magic is followed up at night by the man's going to the kraal, opening the gate and driving away the cattle while the people are sleeping. Should the animals make any noise or prove stubborn and refuse to leave the kraal, it is a sign that the owners have received some intimation of the intended theft and have taken precautions to make more potent magic to frustrate the robbery. Under
●[685] such circumstances the cattle-lifter beats a hasty retreat before he is discovered and captured, as he knows that he will receive no quarter, but will certainly be put to death.

Chiefs possessing large herds of cattle take the precaution to keep a supply of powerful medicine over the gateway leading into the kraal, and also place it in various parts of the kraal so that, when a thief enters the kraal, he loses his
554 strength, is unable to walk and so is captured and put to death. A successful cattle-lifter soon becomes a noted man

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

642 643 have absolute power, but in reality their influence is not great. Each chief subdivides his territory, placing each portion under a sub-chief. These sub-chiefs or headmen are supposed to attend frequently at the chief's village in order to hear and carry out his orders. If a crisis arises, an informal council of the heads of the village is called and the *patres familiarum* can express their views, though the decision rests with the chief. There is no kind of voting. This council will also assemble if the rule of the chief becomes intolerable. They may threaten to secede, but their resistance is always passive; the usual result, however, is that one or more of the headmen set up as chiefs on their own account, and quietly [423] disregard the orders of their *quondam* superior. Land is held in common by the members of each clan, but jealously guarded from subjects of all other chiefs. A [14] man may, and frequently does, move from one clan to another, but in that case he has to obey the orders of the chief to whose clan he has attached himself. There are no formalities attendant on such a change.

578 Trespass by the members of one chieftaincy upon the land of another is indeed the usual cause of the frequent small quarrels which arise and very often lead to bloodshed.

423 621 [177] Internally, however, private ownership of land has to some extent made its appearance. The Jaluo village represents a family, the headman being the father or (if he be dead) the eldest brother. Besides his family he will, if he is a chief, or sub-chief, generally shelter one or two retainers whom he calls his *askari*,[1] police. When the time comes for laying out the *Shambe*[1] or agricultural land, each adult male and female marks out and tills his own piece, the married women being helped by their daughters and younger sons; although the family in practice share the produce, theoretically the crop from each plot belongs to the member who tilled it; thus, if one of the sons wishes to sell some grain he can only sell what he has grown himself, and, similarly, one *askari* reaping what another has sown would be considered a thief.

685 423 Cases occasionally arise which illustrate this: if A's cattle or goats wander into B's *shambe*, though A and B live in one village, B claims compensation. Private tenure is, however, only temporary. If a village uses a certain piece of land for a year and then leaves it, another village may cultivate there; but as the *shambes* are usually close to the villages, and villages are separated by some little distance, such cases of appropriation are practically unknown. The rights, however, to a certain piece of land are only squatter's rights and confer no claim *in perpetuo*.

361 [343] In shape the Jaluo village is circular and is fenced round with euphorbia bush, stone or mud walls, or wattling, as may be most convenient. In the centre is the cattle pen; around this are the store houses of basket or wicker work; they are raised some two feet from the ground and are about five feet high and three feet in diameter; there is a s[illegible]pening near the top sufficient to

684

a criminal offense. He was caught, and the Court fined him a relatively large sum of money and gave him thirty days in which to pay. He became very depressed and, after unsuccessful attempts to raise the money, he hanged himself.

Suicide Case No. 6.

159
762
685

The man involved was in his early thirties, and was in a position of trust with a Local Government body in Nyanza Province. He was alleged to have abused his position of trust by embezzling a considerable sum of money. The auditors had come across this defalcation in the books and brought it to his attention, but before he was arrested he killed himself by falling on a knife. Both the cause and the method can be said to be modern.

159
762

Case numbers seven and eight involve a loss of status, but on the other hand are attributable to poverty.

Suicide Case No. 7.

[888]
[626]

An old man whose wives had all died had to depend on his sons for support. The sons supported the old man while in his village but, after a quarrel, built a new village of their own and refused to build a house for him. As he had no one to support him and as he felt that he was ostracized by his sons, he had, to quote the Luo elders, "No other recourse than to commit suicide. His sons killed him and will suffer." He hanged himself on a thick tree which grew by a river, where he was found by an ex-chief. The Luo elders were quick to point out that he achieved his revenge, because the descendants of his sons were already few in number and mostly girls. "The line will die out because they killed him."

Suicide Case No. 8.

The man in this case was a widower living with his only son, who gave him food, but could not afford to maintain the ap-

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

Industries.

241 **Agricultural pursuits.** Agriculture is the principal pursuit of the people and they have now become dependant upon their crops for the grain which forms their chief food. Millet and maize are grown freely and are ground into flour for making porridge. Men and women work together in the fields and dig them for the seed. They use the common hoe with a long handle when digging, and roughly hoe the ground, when rains are expected. Sweet potatoes, beans and sesame are grown more for change of diet and as additions, such as we should call [302] savouries, to the porridge than as necessaries of life. When the crops are a few inches high, the chief and all his people shave their heads, and from that time till harvest no one is allowed to shave again. After harvest the headman shaves and all the people follow his example. Should any one neglect this custom and shave before the time, it is said to be injurious •[687] to the crops and to prevent the grain from ripening. The culprit is therefore fined for his heedless conduct. When the corn is in the ear, a goat is killed and the contents of the stomach are scattered about the field to prevent blight and to preserve the crops from being injured by hail-storms.

231 234 [262] **Cow-keeping.** Cows form the principal wealth of the people. The numbers vary in a village according to the prosperity and success of the community. Milk is used as an article of food, especially when sour and clotted, but it is more of a luxury, in the present progressive stage of the tribe, than a necessity; and the meat of the animals is almost entirely reserved for ceremonial use. Cattle are herded by boys and [462] young men, who mix their herds and flocks of goats and sheep. Women and girls are strictly forbidden to herd or to milk cows; they may churn and wash the milk-vessels, but there their duties in connection with cows end. Each village has its cattle, and the young men and boys of the place are responsible for their safety during the day, while they graze on the hill-side.

234 When a cow calves, the calf is left with the dam during the first ten days and the cow is not milked. On the morning of the eleventh day the cow is milked and the milk is churned, the

19: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

lineage of the murdered man endeavoured to kill a member of the murderer's lineage in revenge. But the family of the murderer could forestall this process by offering a girl or twelve head of cattle in compensation. If wilful murder occurs between segments within the same maximal lineage, fighting may again occur and a member of the murderer's segment be killed in revenge. Here it is impossible for a girl of the group to be offered in compensation since she would be of the same maximal lineage and exogamous group as the murdered man, and could not be married by any kinsman of his. But the senior elder recognized by both segments calls a council representative of both, and the murderer, if judged guilty, is supposed to be exiled. When a man kills a close relative, belonging to his own minimal class A segment of the maximal lineage, it is *nuru*—a ritual offence.[1] The murderer must bury his relative and stay by the grave until *chola* (the first mourning period) is finished. He must cohabit with the dead man's wife, if she has borne no children to her husband, so that she may bear a child to be named after the dead and to guard his homestead.[2]

The level of groups between which marriage can take place thus corresponds to the level at which general relations cease to be those prescribed between kinsmen, and the groups with which marriage is possible tend to be those between which hostility in the usual attitude. The Luo recognize this correlation, and regard *ode* (in-laws) and *nuoje* (enemies) as almost interchangeable terms.

The normal form of marriage is negotiated by go-betweens on behalf of bride and bridegroom with their respective families. A transfer of cattle has to be made to the bride's family, the normal number being twelve. When the two families are agreed as to the suitability of the match, the groom arranges for a party of his friends to drag the bride from her home. The bride is expected to make a show of resistance and weeping, but it is significant that the dragging must not take place when the bride's parents are absent from the homestead. After the bride is thus brought to the *simbo* of the groom, the latter deflowers her in the presence of married men and women witnesses; the tokens of her virginity are placed on pombends and paraded in triumph to the bride's home the next day and a feast is held there. If the bride fails to prove her virginity in this way no feast is held, and one head of cattle less is paid to her family. The real commencement of a marriage is said to be the groom's sending of *ruok kode* (the 'heifer of the stick'), which goes to the bride's mother, and a bull to her father. Then comes the main payment, varying according to the wealth of the two parties and to the general level of Luo wealth in cattle at the time, but usually eight upwards. After this bride and groom live together for some time in the latter's *simbo*, and then the bride gets permission to return to her own home. The groom goes there with a heifer and a bull, and the feast of *Ariewo* is held. This completes the customary twelve cattle of the bridewealth. Bride and groom then return

[1] Some statistics of actual cases would be required to discover how far the level of segment within which murder is treated in this way coincides with that within which widows of kinsmen may be inherited and assistance given in marriage payments. My stay was too short for the collection of such statistics, but my impression was that such a coincidence is very vague, and it is certainly not consistently present in the minds of the Luo.

[2] Cf. Evans-Pritchard, *Some Aspects of Marriage and the Family among the Nuer*, pp. 5–10. Despite its importance among the Nuer, the obligation of ghost marriage is far from universal among Nilotic peoples. Among the Luo-speaking group it is not practised by the Kenya Luo nor by the Alur nor, probably, the Acoli.

dispose of it as he pleased. On her return a feast was held—the *tero nyako*—for her and her companions. Preparations for this feast were made before her arrival, and the guests invited and the kind of entertainment provided seems to have varied according to the family circumstances. If the parents were poor only the girl's sisters and the friends of her own age who had accompanied her were present; porridge and milk were set before them, and the guests returned on the same day to their own homes. But if the family was rich, older relations and friends of both sexes were invited and were given meat and beer. The quantity of beer required was often more than could be stored in the accustomed place, namely the hut belonging to the girl's mother, and in this case a temporary shelter was built, known as the *siwandha*. It was constructed of reed mats between the mother's hut and the hut next to it, and if the number of reed mats available in the *dala* was insufficient, more were borrowed from the neighbours. After the beer had been drunk the *siwandha* hut was dismantled and its component parts returned to their owners. The guests stayed two or even three days, and it was the convention that before their departure a final meal of meat or of a kind of dried fish called *kabako* (an expensive dish that cost a goat to buy) should be provided and cooked for them by the mother of the bride.

A sort of parallel to this feast known as *lupo* then took place in the bridegroom's *dala*, a cow or a goat being sent to him by the bride's parents to be killed and eaten by his brothers and sisters.

After the *tero nyako* and the *lupo* had taken place a bull known as the *dho golo onyimbo* was paid by the bridegroom, and with them he sent a new *onyimbo*, specially made for her, to the bride. She then returned the *onyimbo* lent to her by the bridegroom's sister, and also took off the small *chieno* and burnt it, being now entitled to wear the big *chieno* of the married woman. This was a bunch of aloe fibre about ten inches long and thick enough to have a diameter of three or four inches. It was tied tightly at the top like a tassel, and was worn hanging from the small of the back, being attached to a string which passed round the waist. This, and a six inch square apron of fibre string was all that a Luo woman wore, apart from her ornaments until the advent of the Indian trader with his cotton piece goods at the beginning of the century.*

* Even now a woman who puts on a cotton dress when she leaves the *dala* sometimes reverts in the privacy of her home to the traditional nakedness adorned only by the tassel and the fringe, and often the dress is put on over the tassel. This curious ornament has clearly a ritual if not a magical significance, of which I hope to obtain details later. I was informed that if a man touches, accidentally or purposely, the tassel of a married woman, he has to pay a fine of three goats to her husband. Moreover, when a woman loses her husband she discards her tassel of aloe fibre and replaces it by one of banana fibre, and this tassel apparently has maleficent properties. For if any man annoys her, she is likely to take it off and beat one of his cows with it, whereupon the cow is regarded as bewitched, and no one will buy it, or accept it in payment of a debt.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

storm of rain broke over the valley, and next morning the complainants were back again to point out that his refusal to come in at the Bwana's summons had so frightened the rain-maker that he had sent rain next day, and to offer most hearty thanks for the white man's beneficent interference.

Though the Jaluo have good manners on the whole, some of their customs are decidedly the reverse of civilised. In common with the other Nilotic tribes of British East Africa, they draw blood from the living cattle and drink it. The custom, however, has its justification, for in many parts of Kavirondo this is the only method by which the natives can obtain salt. Also the older men are confirmed drunkards and hemp smokers, which causes them to age very quickly and probably shortens the average term of life.

Those who dwell on the shores of the great lake and of the larger rivers are expert fishermen: they catch fish with rod and line, a sunken trawl line, in weirs, by woven grass substitutes for nets, and by spearing them with four-pronged wooden spears which they throw with extraordinary accuracy. They are also keen huntsmen, though of little use out shooting, and possess highly trained dogs which will run down an oribi or hare or find a wounded guinea fowl knocked down by their throwing sticks.

In character they are naturally very honest, except with regard to cattle, a temptation which no East African can withstand. They are extremely jealous of any relations between their women and men of other tribes, nations or colour; but among themselves an unmarried woman who has reached the age of puberty may have as many friends, as they call them, as she likes, provided that they come from another clan; after marriage she must confine her attentions to her husband.

Perhaps their most pleasant trait is their love of fun and laughter: the feeblest joke or the slightest bit of horse-play will set them in roars of laughter. For hospitality and industry they have a well-earned name; they are, in fact, in every way most amenable when treated with a little kindness and consideration. They have a considerable knowledge of blacksmith's work, though the spears which they turn out cannot be compared with those of the Masai for fine work. With the latter tribe, however, they show a well-developed artistic sense, the designs on their shields being generally handsome and well carried out. They are also very fond of music—of a kind: they play upon an eight-stringed harp, which is mainly used to provide an accompaniment to their extempore songs, composed in the heroic or comic vein.

Speaking generally and comparatively they are a peaceful, non-aggressive folk, though the common impression *that they are cowards is* ridiculously wrong: in the writer's small experience of African tribes they have shown themselves better fighters than the much-lauded Swahili, and better policemen than the dreaded Masai; they are certainly more amenable to discipline and less inclined to prefer their own wisdom to that of their officers.

On the other hand they are most painfully litigious: civil cases which arose in

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

GA1

the time of their grandfathers are constantly brought for hearing, and the complications which ensue would bewilder the most legal mind.

153 The adaptability which they show in learning the lower stages of all kinds of work is a hopeful sign for the future. To the writer's knowledge they are now 463 employed as soldiers, sailors, police, masons, carpenters, sawyers, blacksmiths, gardeners, and boys. In none of these occupations can they be said to excel at present, though at the head-quarters of the Kavirondo Province, Kisumu, the native sergeant instructor is a Jaluo and does his work very efficiently; but, on the other hand, it is only during the last four or five years' time that Kavirondo and the Jaluo have been taken seriously, and for this short time they show a great progress.

153 Combining as they do an undoubted industry and keen trading character with a surprising quickness to learn the lessons of civilisation, *e.g.*, their ready change from trade goods to cash in commercial matters or their almost immediate recognition of the advantages which may be gained by taking their disputes to the Station for settlement, the Jaluo give us every reason to hope that in them we have a valuable subject race, the study and consideration of which will in a very few years bring to the Protectorate Government a great and enduring profit.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

Government.

643 **Chiefs as rulers.** There is no king of the country, nor is there any single paramount chief; the Bantu chiefs claim equal, if not superior, rights to the land. Certain chiefs rule over extensive districts inhabited by the Nilotics, and their rights as leaders are considered to be hereditary; they are also looked to in cases requiring settlement or legislation.

423 **Land tenure.** Land which has not been cultivated in the past may be tilled by any family; but, when once it has been tilled, the community regard it as the property of the family whose ancestor first cultivated it. Should it be left fallow for a number of years, no other family may appropriate and till it without first obtaining the original owner's permission. Few people seek such permission, preferring to dig virgin-land which will afterwards belong to their children.

621 **Local chiefs as the magistrates.** The people live in communities. They build their houses in close proximity and in most cases surround them with a growing fence, leaving a gateway which can be closed during the night or in times of
622 danger. Such a village group is ruled by a sub-chief who is under the authority of the district-chief. The chief of a village is magistrate and controls the general affairs of his people. This chief levies no taxes, but his people make him presents of goats and sheep, and of grain also at harvest time.

692 **Courts and court fees.** Any person wishing to bring a charge against another for any ofience, real or imaginary,
694 pays a small fee to the chief of the village before whom he lays
695 his complaint or accusation. The chief or elder then summons the accused person and appoints a time when the case shall be heard. The chief sits with one or two village elders and gives his judgment. A person may appeal from a village chief to the principal chief in the district, and the elder who first tried the case will then go to the superior chief to be present when the case is reheard. The parties appealing have
681 to pay fresh court-fees before the case is retried. The punishment in almost every case is a fine and the amount is determined by the gravity of the case. The losing party has to

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

firebrands. So in a small brick room put up by Bishop Tucker in 1911, and now the secondary school's common-room, I met a bunch of schoolmasters, all fluent in English, well-informed and politically-minded.

I put to them the question that most puzzled me; land reforms are unquestionably progressive and of benefit to Africans; by raising living standards they will advance the prospect of self-government; why, then, do so many educated Africans appear to oppose them?

The answer I got was unexpected. Mr. Samwell Ayan, a history teacher, a Makerere graduate, head of the Kenya Teachers' Union and an elected member of the District Council that was embroiled in trouble, spoke impressively—and with moderation and logic.

'People are not getting justice,' he said. 'Men are losing land they are entitled to because of bribery and corruption in the African Courts. Everyone is being bribed—land elders, chiefs, witnesses. Yes, from the African Courts a man can take his case before the D.C., but what can the D.C. do? He sees only the evidence in front of him; it is all rigged; the man loses his land. I know of many cases like that. The Courts are rotten—a washout.

'I know of a case where the president of the Court altered all the evidence after it had been given and sent it up to the superior Court. When the plaintiff heard the false evidence read out, he was hopelessly confused. Clerks take bribes to keep appeal cases beyond the date when the right to appeal lapses. This is being done even in Kisumu. All the land elders can be bribed. The hunger for land is so great.

'What should be done? First, hear land cases before everyone in the location who has, or is entitled to, land—a real people's court. Then, make tape-recordings of evidence in the lower courts; if the evidence is changed, everyone will know. And let the district officer take all land cases so that he hears everything.

'It is because of this corruption and unfairness that people oppose land consolidation. All the same, it has got to come. It is progressive. But do not let it be forced.'

Mr. Ayan spoke with sincerity and even passion. This

Government.

643 **Chiefs as rulers.** There is no king of the country, nor is there any single paramount chief; the Bantu chiefs claim equal, if not superior, rights to the land. Certain chiefs rule over extensive districts inhabited by the Nilotics, and their rights as leaders are considered to be hereditary; they are also looked to in cases requiring settlement or legislation.

423 **Land tenure.** Land which has not been cultivated in the past may be tilled by any family; but, when once it has been tilled, the community regard it as the property of the family whose ancestor first cultivated it. Should it be left fallow for a number of years, no other family may appropriate and till it without first obtaining the original owner's permission. Few people seek such permission, preferring to dig virgin-land which will afterwards belong to their children.

621 **Local chiefs as the magistrates.** The people live in communities. They build their houses in close proximity and in most cases surround them with a growing fence, leaving a gateway which can be closed during the night or in times of
622 danger. Such a village group is ruled by a sub-chief who is under the authority of the district-chief. The chief of a village is magistrate and controls the general affairs of his people. This chief levies no taxes, but his people make him presents of goats and sheep, and of grain also at harvest time.

692 **Courts and court fees.** Any person wishing to bring a charge against another for any offence, real or imaginary,
694 pays a small fee to the chief of the village before whom he lays
695 his complaint or accusation. The chief or elder then summons the accused person and appoints a time when the case shall be heard. The chief sits with one or two village elders and gives his judgment. A person may appeal from a village chief to the principal chief in the district, and the elder who first tried the case will then go to the superior chief to be present when the case is reheard. The parties appealing have
681 to pay fresh court-fees before the case is retried. The punishment in almost every case is a fine and the amount is determined by the gravity of the case. The losing party has to

Ordeals.—They have a form of ordeal called Kiviri; a small pot of water is taken and a little *wimbi* flour and a bit of the medicine are put into the water; if the mixture boils over the man is guilty, and *vice versâ*.

Another ordeal is as follows: a piece of calabash open at both ends is placed on a stone in a bowl of water (Fig. 12). Water is ladled up from the bowl and poured into the calabash, and normally it immediately runs out where the calabash rests on the stone; the medicine man however puts some medicine into the water, and if the man is guilty the water no longer runs out at the bottom of the calabash, and eventually the water runs over the top. I have seen this performed and found that it was the medicine that enabled the calabash to be filled; this medicine was the crumbled up leaves of a kind of mimosa, and being of a fibrous nature it stopped up the points of leakage between the calabash and the stone. There is another trial by ordeal: some dry flour is given to the suspected person, if innocent he can swallow it, and *vice versâ*.

FIG. 12.—THE ORDEAL OF THE CALABASH, OFTEN USED FOR THE DETECTION OF THIEVES, ETC.

Omens.—If the omen bird cries out on the left side of the road it is bad if the journey is for war, but if the journey is a mere visit the person will get food. If the bird cries out on the right side it is good for war but bad for visiting. If a cat crosses the road from right to left it is a good omen, if *vice versâ* it is bad. If you see a rat on the road and it runs in front of you it is a good, but if it crosses the road it is an inauspicious sign.

In some clans it is lucky for the first child to be female and in others it is *vice versâ*.

If on a journey a man strikes his little toe on either foot it is a very bad sign, if he strikes the big toe it is propitious. If a man whose eldest child is a boy is travelling and the first person he meets is a man it is a good sign, but if a woman it is bad, and *vice versâ* if his eldest child is a girl.

They profess to be able to tell whether a man will be killed on an expedition or not by examining the entrails of an ox or sheep. Some even say that in this way a skilled soothsayer will prophesy future events; for instance, he will perhaps say that in so many days news of fighting will arrive, or that a certain disease will appear, or that in say three days a white cow will arrive at the village.

The head chief of each tribe decides when the people are to plant their crops, and some chiefs are said to be able to foretell whether the harvest will be good or bad. The chief Odera is said to have prophesied the advent of European rule when he was quite young. They go to the Nyole rainmaker Mgahanya for rain, and also went to his father Ligiri.

Names.—Many names of men and women are the same, others again only differ in the first letter; for instance, Apio is generally a female name and Opio a male name.

FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

754 in order to kill him. If a person is thought to be bewitched, the medicine
683 man concerned is caught and forced to remove the spell, afterwards being punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkings." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a
●695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

787 As regards *omens*: If a bird sings on the left-hand side as a man
777 is starting on a journey, the journey, if for war, will be unlucky; but if it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that is likewise a bad sign. They profess to be able to foretell events by
787 *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad *prophesied* the *coming* of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 On the occasion of a *birth* the infant, if a boy, is kept inside the house
844 for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

The warriors are armed with long-bladed spears and use large shields three feet high and of a V shape, behind which the bearer crouches and is completely hidden. The shields are made of cow-hide and are so dried that they are hard enough to resist a spear-thrust. Each warrior is painted with red and white clay in fantastic designs and wears a head-dress. Some of the head-dresses are like helmets adorned with ostrich feathers, while others are small straw hats such as a child's doll might wear.

The battle is decided when the cattle are carried off by the one party or when the other party prove themselves strong enough to retain them. The victors dictate terms of peace and the vanquished pay a fine in cattle and women.

Treatment of a warrior who has slain one of the enemy. When a warrior kills another in battle, he is isolated from his village, lives in a separate hut some four days, and an old woman cooks his food and feeds him like a child because he is forbidden to touch any food. On the fifth day he is escorted to the river by another man who washes him, a white goat is killed and cooked by the attendant, who feeds the man with the meat, the goat-skin is cut into strips and put upon the man's wrists and round his head, and he returns to his temporary home for the night. The next day he is again taken to the river and washed, and a white fowl is presented him. He kills it and it is cooked for him, and he is again fed with the meat. He is then pronounced to be clean and may return to his home. It sometimes happens that a warrior spears another man in battle and the latter dies from the wound some time after. When death takes place, the relatives go to the warrior and tell him of the death, and he is separated at once from the community until the ceremonies above described have been performed. The people say that the ceremonies are necessary in order to release the ghost of the dead man, which is bound to the warrior who slew him and is only released on the fulfilment of the ceremonies. Should a warrior refuse to fulfil the ceremonies, the ghost will ask, "Why don't you fulfil the ceremonies and let me go?" Should the man still refuse to comply, the ghost will take him by the throat and strangle him.

8:Shaw G-5 (ca.1930) 1932 FL11 Luo FL11

115 to write down the authorised version of whatever ceremonies it was
184 that I wished to describe. Moreover they warned me not only that customs differed slightly from clan to clan and location to location in North and Central Kavirondo, but that the Luo who had crossed the Gulf and gone to live in South Kavirondo differed in a good many ways from the Luo who had remained on the north side of the water. It must therefore be understood that the customs which I am about to describe are those of a group of Luo clans living in a small area in Central Kavirondo, and that there may be discrepancies between my account of these customs and those of other observers in other parts of the tribal area.

II. The Marriage Customs.

582 In the old days, before the Europeans took over the government
• 721 of the Luo country, it seems that a man did not normally marry until he was nearer forty than thirty, and girls did not marry until they were nineteen or twenty. In the case of a man this delay was apparently connected with his duties as a warrior. It was considered that a man fought better if he were free from the ties of married life. Though the Luo were never a fighting tribe in the grand manner like the Masai they had for some hundreds of years been pressing southwards through the surrounding Bantu tribes. Raiding for fresh land or even for cattle alone, and the consequent reprisals on the part of the raided, played an important part in tribal life, and every able-bodied man from the age of seventeen or eighteen up to the time of his marriage had to hold himself in constant readi-
541 ness for a foray. The term for a man of fighting age was *wuoro*,
885 that for a married man *jaiti*, while that for a man who delayed to marry until much later than usual was *mwanda*. After marriage a man seems to have been exempt from all warlike duties and allowed to settle down and devote himself entirely to his family life.

582 It is likely that this postponement of marriage to a comparatively
585 late age was, apart from its connection with the defence of the tribe, an instance of the reluctance of the older men to surrender even a part of their wealth and power to their sons. A man could not marry without his father's permission, for it was only from his father (except under special circumstances into which I need not enter here) that he could obtain the cattle with which to acquire a bride, and primitive fathers are often no more anxious than some civilised ones to part with large quantities of their worldly goods for the benefit of their children. There was, however, no hard and fast convention as to the age at which a man might marry. Circumstances altered cases. A mother, for instance, who was without an unmarried daughter, and who wanted another woman to help her in the household work and cultivation, might insist that her son should bring a wife into the family, even if he had not yet reached ordinary marriageable age. Again if there

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

765 she makes a new girdle from papyrus while still at the river, and wears it as she returns to her village. She is then free to remarry.

775 Dead people are sometimes said to come to life again. This is reported to take place within a short time after death. It is said that the spirit had gone on a journey and had returned after the man was thought to be dead, but in time to stop the funeral. The supposed dead person sneezes and revives, the sneezing being thought to be the signal that the spirit has returned from his journey.

764 **Death of a wife.** Should a wife die before her husband, her body is buried in the house, and, when the husband dies, he is buried in the goat-house near. He may not be buried in the same house with his wife. The animal offered at a man's funeral is always an ox, while it is an old cow that is offered at a woman's funeral. The skin from the animal is used to wrap the body as a shroud. The meat from the animal is divided in the following manner: a shoulder is retained for the dead and is eaten by the mourners at the grave, the second shoulder is for the relatives in the village, and the remainder, with the exception of the neck, is for the guests who live at a distance: the neck is given to the medicine-man.

766 A suicide is buried in the open, never in a house. Should the death have taken place in a house, it is burned down, for no one will live in it.

Warfare.

721 **Mode of conducting wars.** The people are not fond of war and fortunately their wars are never very serious matters. Cattle-lifting and women-stealing are the chief causes of fighting. The battles take place after short notice, when it is found that cattle have been robbed or when the alarm is given that a woman has been captured by some other clan. When a fight is impending, the attacking party drive a few cows to some spot where the other party may see them and challenge the others to come and take them. The party challenged must either attempt to carry off the cows while the others protect them, or they must pay a fine imposed by the attacking army.

Should the man still refuse to comply, the ghost will take him by the throat and strangle him.

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

would have supplied sufficient food for the whole village (about 50 people) for 3 months. — When all the beer is finished the bridegroom's father asks his host whether his son may now build his wife a hut, and whether she may stay with him definitely. The worthy parent will answer: "No, not yet, because the heifer for the father of the girl *(roch wuoro)* is to be brought still."

Now the relations of the bridegroom go home taking a binding of the cow along, which is to be carried by the bride. But she will say: "It does not behove that I should walk along the road with my father-in-law; I will come later." Somebody of the party carries the leg, and she follows next day. Henceforward she is allowed to enter her mother-in-law's hut, where she does the cooking for her husband, and stays no longer in the simba. Unless she is with child already she goes home again after a few weeks, because her father has not quite released her yet, and she still plays about with her girl-friends.

When her husband has found the heifer still warmed by her father, he takes it to him. Again he asks leave to build a hut for his wife. If the father agrees he returns with his wife and starts building at once. The woman stays with her husband definitely, for the full dowry has been paid.

Some time later the woman's father brews beer and sends word to his son-in-law, who gathers his brothers and friends to go to this beer party *(kinch kongo)*. All of them except the husband himself go to the hut of his mother-in-law, where the beer stands ready. Not until he has given her either a goat or a sheep is he allowed to enter. This animal has to be handed over not by the husband himself, but by a relation of his. With this beer party the full marriage ceremony ends.

The woman, though she has her own hut now, goes on cooking in her mother-in-law's hut. Five months after she has conceived she has regularly to take *yuath agulu* which medicine has to be warmed up every time before taking it. This she does in her own hut. However, the evening before she boils this medicine for the first time, the children of the kraal pick some vegetables and cook them in the woman's hut. This is the first food cooked there. Both husband and wife, and also the children who cooked them partake of these vegetables.

From now onwards she cooks all the food in her own hut, but her husband is not allowed to eat any of it yet. He goes for his meals to his mother's hut. After about 4 days the woman goes home once more to fetch a goat for her husband. With the goat and also some other meat and fish she returns to her husband. When this food is cooked she calls her husband and the men of the village for a little feast. On this occasion she gives the goat to her husband, thereby sealing the contract with him *(oriso chwore)*.

Burial of a married Man.

In the olden days the death of a warrior was considered to be brought about by some enemy through witchcraft. This death had to be revenged. So the very next morning, before the man got buried, people got ready for a fight, and went out to the boundary of a hostile tribe to wage a war against them. No sooner was the warcry raised or the hostile tribe got ready too, and came to the boundary. Both parties took some of their cattle with them. After the fight the victorious party took the opponents cattle as spoils.

11: Hartmann M-5 (ca. 1920)1928 FL11 Loc FL11

764 Since the Administration of the country by the "White Man" these wars are a thing of the past. However, the old custom remains, in so far, that even at present on the morning after a person's death his relations and tribesmen have a sham-fight, at the same places where formerly they used to fight their real wars.

764 The wailing at a person's death spreads the news in no time, and at day-break all the men of that tribe attire themselves in their war-dress, after having smeared themselves with clay and mud, and go out with their shields and spears. They gather at the kraal of the deceased, and having brought some cattle they go out to the uninhabited boundary of their district for their sham-fight.

There the performance starts with the killing of a chicken as a sacrifice to the gods, that they might favour and bless their war, just as they did in the days of old. Whilst the old folks roast and eat the chicken the warriors dash forward to their imaginary enemy here and there stabbing a tuft of grass or throwing their spears at a bush, and rushing back again as if the enemy was on their heels.

When after an hour or two of fighting the enemy is defeated, they go back to the village of deceased. From the moment he gave up his ghost (and sometimes before that) the people of the village have been bewailing him, running in and out of the hut, shouting and yelling all the time. They have also taken his cattle one by one to the doorway of his hut, that they too might bewail their deceased master.

And now, after the warriors have returned, the corpse is put in front of the hut. The warriors and the people of the surrounding country (sometimes thousands of them, if deceased was a chief, a witchdoctor, a rainmaker, or other important personage) go up to the corpse, and bewail it, running in and out and round the kraal, all of them yelling like madmen.

The warriors also take their "spoils" up to the corpse, to show the spirit of deceased that his death has been revenged.

Whilst this is going on three men are digging the grave. If he was a rich man, i. e. if he had many wives, the grave is dug next to the hut in which he died, after a small temporary hut has been built over the spot. If he had only few wives then the grave is dug inside the hut in which he died. The corpse is lowered in the grave by 4 men, and the children of the village with their hands and feet scrape the earth into the grave, always with their backs towards the same. After the actual burial the wailing goes on for another half hour or so, whereupon all the outsiders return home.

In the evening the people of he kraal go to the grave with a chicken, which, held by the legs, is smeared with its head on the grave till it is dead. Then it is roasted and eaten. They also put a broken cooking pot on the grave, which they crumple to pieces there. Then they kill a sheep, which is eaten by the men that night. Its skin is cut into narrow strips. These are tied round the right wrist of all the male inhabitants of the kraal, and round the left wrist of all the females. This finishes the ceremonies for the day.

765 Next morning arrangements are made in the open space outside the village for a dance. The older women beat a couple of drums, the young women and girls from he neighbourhood dance, the men and boys in their war-costume run about

Besides dowry payments the Luo had other means of obtaining cattle before the advent of the Europeans. Two of these ways, which no longer exist, were the capturing of enemies' cattle during inter-tribal wars and robbery during the night. Because there were only few cattle in those days the number of cattle paid for dowries was very limited, not even half of what it is today.

Inheritance and exchange are now the natural means by which the Luo obtain cattle. As mentioned above in discussing dowry the first eight to twelve cattle paid for a dowry, though nominally known as the property of the father of the girl, are in the real sense the inheritance of her full brothers. The father can do anything he likes with them during his life-time, provided he consults the girl's eldest brother. It frequently happens that there is disagreement between the sons and the father, who may try to dispose of these animals without consulting the sons. The other animals belong to certain individuals, e.g., father, uncles and mother. Those of the father if he is a polygamist are inherited by one of his sons who has no sisters. If the father has two or more sisterless sons born of different mothers they inherit equally the special cattle he gets from the dowry of those daughters who have full brothers. These sons also inherit the cattle, goats or sheep that he gets by other means, e.g., those obtained by exchanging millet or maize and those paid to him for the dowries of his nieces. Cattle paid to the mother-in-law by her son-in-law are inherited by her eldest or last son. Usually a father gives more to a son whose mother has died if he is a good son. He calls this son his orphan. If a father loves one of his sons more than the others he may take some of his cattle to one or other of his friends, and tell him that they can only be taken after his death by the loved son.

A man inherits his brother's animals if the brother dies and leaves no son. If a man, having a brother, dies before having children by his wife, and the widow marries someone else of her husband's clan, children born to her by her new husband belong to the brother of her former husband, and so, if they are girls, the brother inherits most of the cattle paid for their dowries. If, however, these girls have a brother, he inherits the cattle.

Some people start to obtain cattle by exchanging their millet or maize for sheep, goats and poultry in the first instance, and when the number of these small stock has increased, they, in turn, are exchanged for cattle. Sometimes a man gives his friend an assurance that if he gives him some goats he will in return give a heifer which can be kept until she calves. After weaning, the calf remains the property of the friend while the cow is returned.

4: Hobley G-5 (ca. 1900) 1902 FL11 Lee FL11

were in black. Others smear themselves with white earth. Relations in the village shave their heads three days after a death. The eldest son of the deceased sits on a stool in the road outside the village and his head is shaved by an old woman. For three days after the death of anyone of importance the villagers do not cultivate.

If a big chief dies all the surrounding people collect at the village; even if a neighbouring clan is at war hostilities are suspended, and they attend the funeral rites of their late enemy. In the case of the death of a chief a new hut is built and the deceased is buried inside in a sitting posture; the grave is dug by a brother of the deceased. A new *ntale* is placed at the bottom of the grave, and the head of the corpse is covered with a water pot. Seeds of every kind of grain grown are put into the grave; sweet potatoes are excluded. The people dance and drink *mwale* for ten days and many cows are slaughtered. The men wail for ten days, but the women wail every morning for about a year. No one cultivates the fields for ten days.

Birth customs.—On the occasion of a birth, if it is a boy it is kept inside the house for four days, if it is a girl for three days. When a birth takes place the female neighbours attend, and a goat is killed for the mother and the other women. No men is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the hut until the child begins to cut its teeth. The mother does not go to cultivate for about nine days after the birth.

If a woman has had two children and they have both died, she will upon the birth of the third child take it out of the village on a basket-work tray and place it in the road; an old woman who has had a hint of this will go and pick it up and take it to her house, then the father of the child goes and buys it back for a goat. having recovered it the father bores the lobe of its right ear and inserts a small earring of brass wire. If the child is a boy it is henceforward called Owiti and if a girl it is called Awiti, meaning the child that has been thrown away. The old woman who picked up the child is afterwards called mother in addition to the real mother.

Twins are considered lucky, but the infants and their parents have to stay in seclusion in their hut for a whole month. Women neighbours may enter the hut but men may not. The twin born first is called Apio (the one who comes quickly). The twin born second is called Achoga (the one who is delayed). The birth of twins is signalled by dances which extend over a whole month; they are apparently of a somewhat obscene character.

Marriage customs.—Girls are espoused at the age of seven, and they often go to their husband's house at the age of ten or eleven. The suitor commences by making small payments to the father of the girl every month or two. When the man has paid say one cow and twenty sheep he takes the girl to his house.

The unmarried girls of the village take the bride to her husband's house. The father of the girl kills an ox and takes the meat and a quantity of cow's porridge to the man's village by way of providing a wedding feast. If the man's

The warriors are armed with long-bladed spears and use large shields three feet high and of a V shape, behind which the bearer crouches and is completely hidden. The shields are made of cow-hide and are so dried that they are hard enough to resist a spear-thrust. Each warrior is painted with red and white clay in fantastic designs and wears a head-dress. Some of the head-dresses are like helmets adorned with ostrich feathers, while others are small straw hats such as a child's doll might wear.

The battle is decided when the cattle are carried off by the one party or when the other party prove themselves strong enough to retain them. The victors dictate terms of peace and the vanquished pay a fine in cattle and women.

Treatment of a warrior who has slain one of the enemy. When a warrior kills another in battle, he is isolated from his village, lives in a separate hut some four days, and an old woman cooks his food and feeds him like a child because he is forbidden to touch any food. On the fifth day he is escorted to the river by another man who washes him, a white goat is killed and cooked by the attendant, who feeds the man with the meat, the goat-skin is cut into strips and put upon the man's wrists and round his head, and he returns to his temporary home for the night. The next day he is again taken to the river and washed, and a white fowl is presented him. He kills it and it is cooked for him, and he is again fed with the meat. He is then pronounced to be clean and may return to his home. It sometimes happens that a warrior spears another man in battle and the latter dies from the wound some time after. When death takes place, the relatives go to the warrior and tell him of the death, and he is separated at once from the community until the ceremonies above described have been performed. The people say that the ceremonies are necessary in order to release the ghost of the dead man, which is bound to the warrior who slew him and is only released on the fulfilment of the ceremonies. Should a warrior refuse to fulfil the ceremonies, the ghost will ask, "Why don't you fulfil the ceremonies and let me go?" Should the man still refuse to comply, the ghost will take him by the throat and strangle him.

4: Hobley C-5 (ca. 1900) 1902 FL11 Luo FL11

Personal marks, etc.—They draw the six middle incisors in the lower jaw. If a man does not have these teeth drawn it is said that his wife will die soon after marriage. The women tattoo a pattern on the chest and stomach, consisting of thin curved lines of dots on each side reaching round to near the spine, where they turn upwards. Males are not tattooed. The tattooing is done simply for ornament.

Circumcision.—They do not circumcise. If a man has killed an enemy in war he shaves his head three days after his return from fighting. He moreover does not enter his village until a live fowl has been hung round his neck, the fowl is then decapitated and the head of the fowl left hanging from the man's neck. Shortly after his return a feast is made to the man who has been killed, in order that his spirit shall not come and trouble the victor.

Dress, etc.—Unmarried men go naked. (Plate V). Married men who have a child wear a small piece of goat skin; this piece of goat skin is a most important matter for a married man, for although practically useless as a covering he must on no account call to see his mother-in-law without this dress or she will be dangerously hurt and insist on his paying up a goat. Even if he is properly clothed in European garments he must wear his goat skin underneath. Unmarried girls wear no clothes (Plate VI). Married women wear a tail of strings behind but not in front, like the Northern Kavirondo. Married women when they go to visit another village wear a goat skin slung from the shoulder, upon which curious patterns are cut. When a married woman first shows the tail, her husband presents her with a goat, which she sends to her father. It is very bad manners in a married woman to serve up food to her husband without wearing her tail, and the husband will probably refuse to eat the food. This rule even holds if the woman should be wearing garments of cloth. If a man touches a woman's tail it is said that he wishes to bewitch her, even the husband must not touch it; if this rule is broken it is necessary to kill a goat.

Many of the Ja-Luo affect rather a notable ornamentation of the ear; about fifteen small holes are pierced along the outer edge of the ear and in each hole a ring of brass is inserted, and on the front side the brass is fattened out like a small leaf, to the outside extremity of each ring is attached a blue bead. In the lowest hole in the lobe of the ear a plain brass ring is inserted.

For a long time I thought that these blue beads were ordinary trade beads of the variety known as Johni, but upon inquiry this was indignantly repudiated, and it was explained that these beads were picked up in the fields in the neighbourhood of the Mavapelle Hills after a heavy thunderstorm, and that it was believed that they descended with the rain. Some of the chiefs also wear beads of jasper and chalcedony with a fine circular hole; these beads were formerly of great value and were purchased at the rate of one cow per bead; they were picked up in the same way. Their name for these beads is Nya-Luo, and it is thought by some authorities that these beads have wandered down in ages past from the direction of Egypt; in fact some of the more Northern Nilotic people tell you that they

4: Hobley G-S (ca. 1906) 1962 FL11 Lan FL11

Games.—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

Upon return from war about two out of every three cattle go to the chief; the chief then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the chief. A man who distinguishes himself in war is also often given a wife without payment.

Food, etc.—They eat practically all meat except that of the hyena. Some young men eat leopard meat to make them brave in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balearica pilleriana*) is never killed or eaten by these people.

Medicine, etc.—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for ulcers and for purging, but not for diarrhœa. They also have medicine to avert a threatened miscarriage. They profess to have a certain antidote for snake poison.* Venereal disease is practically unknown among the Ja-Luo.

Before going to war they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called Odede.

Peace ceremonies.—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representative of each side takes out a piece and gives it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and pretend to sweep up the cattle boma; this will be accepted as a sign of submission.

Killing animals for food.—They kill cows by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

Succession customs, etc.—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the widow, but the eldest son will probably take the youngest wife of his deceased father.

* After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Rendle, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Phytolacca dioica*, is used internally, an infusion being made from the leaves. The other plant, *Spermacoce pedicellata*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

this tail behind and receive a present from her husband. Afterwards it is considered very bad manners for a married woman to serve food to her husband without putting on this tail. On the other hand, if the husband or any other man should touch the married woman's tail, it is considered that he wishes to bewitch her, and such an offence must be atoned for by the usual sacrifice of a goat.

Fig. 480. PATTERN SHAVED OUT OF MAN'S HEAD (1/4 SIZE)

The Ja-luo pull out the incisors in the lower jaw. It may also occur amongst these people, as amongst the Lango tribes to the north, that not only the four incisors, but even the canines, are taken out, as may also be the case with the Masai. They do not circumcise, nor do they wear or tattoo their bodies, with the exception that women raise three parallel lines of dots in a semi-circle on either side of the body, the ends of the semi-circle meeting in front just below the navel, and again on the backbone. If a man has killed an enemy in war, he propitiates his enemy's spirit by shaving his head for three days after his return. Heads of men are also shaved in the pattern given in the accompanying illustration (Fig. 480).

The Ja-luo, together with tribes remotely allied in origin, such as the Nik and Lango, ornament the outer rim of the ear in a remarkable manner. About fifteen small holes are pierced along the edge of the cartilage, and a flattened ring of brass (looking in shape rather like a curtain rod) is inserted. Hanging on the outer side of the brass ring is a large blue glass bead. In the lowest hole towards the lobe a plain brass ring is inserted. Regarding these blue beads Mr. Hobley writes: "For a long time I thought these blue beads were ordinary trade beads of the variety known as 'kiboti'; but upon inquiry I found this idea was indignantly repudiated. It was explained to me that the beads were picked up in the fields in the neighbourhood of the Mavoglio Hills* after a heavy thunderstorm, and it was believed that they descended with the rain." Some of the chiefs also wear bits of juyper and chalcedony with a fine circular hole. These beads were formerly of great value, and were purchased at the rate of one cow per bead. They are said to have been picked up in the same way. Their name for these beads is

765 a dead person shave their heads for three days after the death. The eldest son of the deceased sits on a stool outside the village, and has his head shaved. If any one of importance dies, the neighbours do not 766 cultivate for three days after the death. If a big chief dies, all the surrounding people collect at the village, and in such cases even hostilities between clans are suspended, and all join in the funeral rites of the late chief, even if he happens to be at war with some of his dependent clans. In the case of the death of a chief, a new hut is built. The grave of the chief is dug by his brother. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water-pot. Seeds of every kind of grain grown in the vicinity are put into the grave, but sweet potatoes are excluded. The people dance and drink "tembo" for ten days, and slaughter many oxen. The men wail for ten days, but the women wail every morning for a year. No one cultivates the fields for ten days.

428 When a man dies, his *property* goes to the brother, if the children are small. If the eldest son is grown up, he takes the property and gives his brothers a share, but a man is not allowed to take the amount paid by any one who marries one of his sisters. This marriage payment goes to [58] the deceased father's brothers. The brothers of the deceased take his wives, [22] but the eldest son probably takes the youngest wife of his deceased father. When a *chief* dies, the son whom he has chosen succeeds him. This successor is chosen really some years before the chief dies. The successor divides the private property of the chief with his brothers.

●727 When a warrior *has killed* a man in *warfare*, he must (besides 782 shaving his head) catch a fowl and hang it round his neck head uppermost. He must not enter his home village until this has been done. Whilst the fowl is suspended to the man's neck by the beak its head is severed from the body, and the head is left hanging from the man's neck. The warrior then enters the village, and shortly afterwards prepares a big feast to propitiate the man he has killed, so that his ghost may not give 788 trouble. If a house is struck by *lightning*, and any one is killed inside, the head-man of the village must obtain a male fowl of a red colour and walk round the house holding up the fowl three times. The house is then broken up, and the wood is used for other purposes. When desiring 728 to make peace with another tribe with whom they have been at war, they kill a sheep and put part of it into a wooden mortar such as is used for crushing grain. The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been worsted, and which is suing for peace, must [23] then go to the head village of the conqueror and proceed to sweep up the cattle kraal. This is accepted as a kind of submission.

145 Like the Bantu Kavirondo, the Ja-luo are in the main a healthy people.

They suffer not infrequently from pneumonia and other affections of the lungs, and their remedy for these maladies is to pierce a hole in the chest, and even to cut out a small piece of the inflamed lung. They have an antidote for snake poison; remedies for diarrhœa, constipation, ulcers; salves for wounds; and even drugs which are taken to avert threatened miscarriage. Venereal disease is practically unknown amongst this people, which, although so indifferent to nudity, is yet too moral to permit sexual intercourse with strangers.

Men and women have the same names. But in many instances,

[illegible]

whereas the root of the name is the same, it is preceded by the vowel "O" in the case of a man, and "A" in the case of a woman. For instance, "Opio" is a male name, and "Apio" is a female name.

The games they play are few. There is the well-nigh universal game of little compartments in which seeds or pebbles are put. Boys and young men sometimes play a kind of hockey, knocking about a wooden ball.

After the return from a warlike expedition two out of every three cattle go to the chief, who divides his share with his brethren, and also gives a special reward of cattle to any man who has particularly distinguished himself in war. To this here a wife is often given for payment.

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Games.—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

Wars, etc.—Upon return from war about two out of every three cattle go to the chief; the chief then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the chief. A man who distinguishes himself in war is also often given a wife without payment.

Food, etc.—They eat practically all meat except that of the hyæna. Some young men eat leopard meat to make them brave in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balearica gibbericeps*) is never killed or eaten by these people.

Medicine, etc.—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for abscess and for purging, but not for diarrhœa. They also have medicine to avert a threatened miscarriage. They profess to have a certain antidote for snake poison.* Venereal disease is practically unknown among the Ja-Luo.

Before going to war they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called Odola.

Peace ceremonies.—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representatives of each side below cut a piece and give it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and proceed to creep up the cattle boma; this will be accepted as a sign of submission.

Killing animals for food.—They kill cows by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

Succession customs, etc.—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brothers. The brothers of the deceased take the wives, but the eldest son will probably take the youngest wife of his deceased father.

* After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Stapf, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Physalodon Hispanicus*, is used internally, an infusion being made from the leaves. The other plant, *Spermacoce palmosa*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

FL11 Luo FL11

pay the fine, and from the amount the judge takes a portion for himself and passes the remainder to the successful litigant.

Making peace between sections of the tribe. Should there be a quarrel between two sections of the tribe and a desire be felt to end the strife, the chief of one section goes to the chief of the other with a few of his principal men, and they spend the afternoon and night together discussing the difficulty and finally coming to terms. The following day a goat is killed, some of the contents of the stomach are smeared over the chests of those present, and a little of the meat is pounded in a mortar and eaten as a sacred meal to ratify the terms of peace. As they eat the meal, they promise to live at peace, the form of oath taken being "By the dead dog."

Theft. Cattle lifting is the most common form of serious theft. Men seek to steal cattle from members of the same tribe living at a distance from their own district, because the animals stolen can thus be more easily secreted. A man who intends to rob a kraal first visits the place with his son in order to work magic and to make his preparations. He takes with him a number of sticks pointed and prepared for the magic, and indicates certain spots to his son, who drives a stick into the ground at each place. These are magical sticks which cast a spell upon owners of cattle. The magic is followed up at night by the man's going to the kraal, opening the gate and driving away the cattle while the people are sleeping. Should the animals make any noise or prove stubborn and refuse to leave the kraal, it is a sign that the owners have received some intimation of the intended theft and have taken precautions to make more potent magic to frustrate the robbery. Under such circumstances the cattle-lifter beats a hasty retreat before he is discovered and captured, as he knows that he will receive no quarter, but will certainly be put to death.

Chiefs possessing large herds of cattle take the precaution to keep a supply of powerful medicine over the gateway leading into the kraal, and also place it in various parts of the kraal so that, when a thief enters the kraal, he loses his strength, is unable to walk and so is captured and put to death. A successful cattle-lifter soon becomes a noted man

The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been worsted, and which is suing for peace, must [28] then go to the head village of the conquerors and pretend to scrap up the cattle dung. This is accepted as a kind of submission.

195 Like the Bantu Kavirondo, the Ja-luo are in the main a healthy people.

[952] case of the main store being depleted. Grown up unmarried sons
943 and also daughters could have each his or her own "mundo." In case of necessity their grain went into the family store, but from it they were allowed to barter grain for the personal ornaments which were common in the tribe. Grain which was still in store when the new crop came in was at the disposal of the woman, who frequently used it in barter for domestic animals. This custom is called [953] "rundo," and the beast procured, if a cow or heifer is called "dhoo tabre." It was the woman's own property, subject to the limitations of absolute ownership which pertain to all notions of property among primitive peoples. It could not be bequeathed away from her by her husband. In case of famine she could take of its offspring and barter it for grain. Once having acquired the beast she did not readily part with it, but kept it for her children.

238 As at the present day so also in days gone by, there was no tribal organization of food supplies as a provision against famine. During the last two or three years when crops have been short through damage by locusts there has been one word which was heard very frequently. The word is "kinoma." It means to journey away from the home locality in search of food for the family. In days gone by domestic animals were taken to those who had food to dispose of, and bartered for grain. A man without stock would marry off his girl child, and with the cattle get food. This was the only way in which famine conditions were met. Needless to say when famine was widespread, very much suffering was entailed.

242 Rotation of crops is practised to a limited extent. The order of rotation is decided largely, by the period of the year in which the first crop is put down. If virgin or fallow land is prepared for the autumn sowing, then the first crop is one which ripens quickly, such as simsim or beans. When this is harvested, the land will be put under a slower growing crop, like millet or maize. Before being allowed to revert to fallow land, it may be put under sweet potatoes. If the land is first prepared for the spring sowing then the order is reversed. But it must not be taken that what has been written above is the invariable rule. I have known a field to be put down first in sweet potatoes and then followed by a second crop of potatoes before being planted with maize. Also where the land is very rich, as in certain valleys, year after year maize or millet may be put down until the land shows signs of exhaustion. It then reverts to fallow. There is no strict rule governing the length of time it rests. Some allow a rest of three, some of five years. It depends upon the amount of land available and the pressure of population upon it.

The names used by the Luo for the different phases are as follow:— Virgin soil, "Obuog." Land under rotation, "Tiang." Fallow

21:Huxley Q.T-5 (no date) 1960 FL11 Luo FL11

resistance to the forward march of Progress in the agricultural field. No spontaneous wish for any branch of Progress except the political seems to have gripped the collective Luo mind. Here, on these hot and apathetic lakeland flats, all the impetus has come from Europeans.

It might be argued that the Government has no call to make people change their ways against their will. This indeed is an argument much used by Luo politicians. It is an old story: should nanny sit by and watch Master Robert break up his toys—in this case, ruin the soil, create acute erosion, turn the whole of Nyanza province, which contains one-third of Kenya's population, into a great rural slum?

Beyond question, that was going on. In Nyanza province there are over two million cattle, about one to every two acres. It would be a job to support this rate of stocking on the finest pastures under skilled management; here it is utterly impossible. The cattle have become so small and shrivelled that they are really not much larger than Great Danes, but their sharp hoofs can still make and deepen gullies as they track a way to springs. During the last three years, the output of crops in the province has halved, because yields have dropped so sharply. Yet there are more and more mouths to feed.

All the evils of land abuse were here displayed in concentrated form. No manure, no rotations, no resting land under grass; maize or cotton again and again, planted too late and in the wrong manner; no trees, communal grazing destroyed by useless skinny little beasts. It was not for want of trying by the technical staff. For years they had been urging, persuading, bullying, demonstrating, and they had scarcely dented Luo indifference and complacency. Famine was beginning to threaten these overcrowded areas—for the one thing the people continued to produce more and more of was their own kind.

2

And so the Government decided that the only salvation for the Luo lay in dividing their communally owned land into individual holdings. Land consolidation—the first stage

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

raised against such raiders. It is considered a disgrace to be discovered as an accomplice in raids on the girls' sleeping quarters.

On attaining Maturity

The attainment of maturity among girls is marked by the first onset of menstruation. In the past this was kept very secret until several periods had been experienced, and even now its first occurrence is kept secret. Formerly, early preparations were made for it by instructing the girls about the physical changes involved.

The information regarding this important physiological happening used to be given by the old woman in whose hut the girls slept. At present the information is obtained largely from experienced women with whom the girls associate. In the past there was no initiation ceremony to celebrate the event, and today the position remains the same. Although the betrothal of a girl could take place as early as ten, the social attitude was and still is that girls should not be handed over to their husbands before attaining maturity. Even when the mutual handing over took place before this age, the girl was obliged to live in the home of some older woman until the advent of menstruation. It is still believed that premature marriage results in great weakness to the girl.

The social position of a girl on reaching maturity. The social position of the newly-mature girl is vague and uncertain. Any abnormality of mind, character or body, is a source of anxiety to her family. Moreover, as most girls marry between sixteen and eighteen, there is a tendency for ill-wishers to over-state the ages of girls above that limit, because the attitude of society towards them is similar to that adopted towards overdue goods. Those who fail to marry at an early age thus become subjects of scorn. So strong is the pressure exerted by

19:Wilson E-5 (ca. 1950) 1960

village straight to the hut which houses the body and to fall prostrate on it, wailing and crying. However, on this occasion, the woman walked very slowly into the village as if in a daze and without crying and without wailing and without saying a word to anyone. She entered her house and locked the door. Those in the village immediately became suspicious and broke the door down but within those five minutes she was found dead from hanging. The villagers told me that she believed the curse of her father had killed the man she loved, so she went to join him.

Suicide Case No. 23.

762
151
888
739 ●
[603]

An elderly woman, whose husband had died, depended on her children for sustenance. In her old age she contracted a disease similar to leprosy. Her son, as is customary on such occasions, destroyed her house in the compound and built one for her outside of the homestead. One morning they found that she had hanged herself because, they stated, of the pain and trouble she experienced through her illness and because she was so unhappy that she could not take her grandchildren to teach and love as was her role in life as a grandmother. Her illness barred her from all of the village activities, and she felt that she was no longer part of the family. Her ghost was not considered to be any more dangerous than that of a person who died a normal death because she was old and her suicide was from old age and weariness. She held no grudge against anyone.

from an examination of the entrails, delivers an augury on the success or otherwise of the expedition. Among his utterances he may remark that some will be wounded with arrows, and, upon hearing this, each person proceeds to the nearest acacia tree and pluckes a green thorn, and if he is possessor of a shield, he sticks the thorn in the wooden middle of his shield and breaks it off, leaving the point of the thorn in the shield, and carries it into action with him; if he has no shield, he breaks off the thorn in the hair on his forehead; this is believed to be a most potent charm against arrow wounds.

N 793

Among the Nandi too, there is a curious custom which is performed by a married woman, when she discovers she is first pregnant.

She collects from the unmarried girls, who are her near neighbours, pieces of their dress, strings them together and sews them on to the lower edge of her own robe, which is a semi-tanned ox-hide. The unmarried girls in Nandi wear a small skin apron from which depends a number of leather strips or tassels; from one, the woman will borrow a single tassel, from another, a tassel, and perhaps from another girl, who has more than one dress, she will borrow the apron complete. She wears these until after the child is born as a charm to ensure her pregnancy taking its normal course, and then returns the borrowed articles, at the same time inviting all the lenders to a feast.

J 751 J67

A sprig of a certain herb is often worn by the Nandi in a hole pierced in the upper lobe of the ear as a charm to avert evil.

L 751 J67

The Ja-Luo, in fact all the Kavirondo people, wear numerous small charms suspended by string round the neck. I had often wondered what all these odds and ends represented, so I induced one of the principal chiefs, named Ugede, in a confidential moment to unconscrew them and tell me their origin. They were—

1. Iron arrow points, which were given him the day he was named.
2. A small strip of thin iron sheet with three holes punched in it (fig. 1). This signifies the name of his grandmother Thako, who bequeathed it to her daughter, with instructions, should she have a son, to call him Thako. (Thako is Ugede's second name.) This may point to some old survival of a time when men traced their ancestry through the female line. This, however, would hardly seem to be borne out by an examination of Ugede's genealogical tree which only takes account of the male line of descent.

Fig. 1.

3. A transparent crystal of rock crystal or quartz, said to have been picked up in the lake, as the rock around Kisumu is blackish basalt. If the story is true, it was probably dropped by some ancient resident in, or some visitor to, the locality. It is secured in a neat little leather cup shrunk on to the base of the crystal (Fig. 2).

Fig. 2.

4. An irregular piece of very hard yellowish stone which was worn by his father Otiendi; it has a hole bored through it, and an iron ring inserted (Fig. 3).

5. About half-a-dozen of the Nyo-Lao ancient beads, the yellow variety.

6. A piece of goat-horn, worn as medicine to prevent chest complaints.

7. The dried beak of a chicken, which is also worn as medicine for sickness; a medicine man told him to wear it.

FIG. 3.

8. The upper portion of a large marine shell of the type shown in Fig. 4. The lower portion is cut away, and nothing but the helix at the top of the shell remains (Fig. 5). This ornament is very common among the Wanyamwezi, and probably worked its way from the south. It belonged to Ugulu's father Otiendi, and is said to have come originally from Ogulu, chief of Kanyamwezi on the south side of the lake.

FIG. 4.

FIG. 5.

9. Around the left wrist was a sinew cord through the strands of which were inserted four small pieces of stick (Fig. 6). The sticks are called *enemi* and are worn to prevent the wearer taking harm if one of his children touches him; why, was not stated.

FIG. 6.

10. A heavy brass bracelet worn on the right wrist; this was said to be very old, and to come from Aiyimbo, in the direction of Uganda. It belonged first to his brother Otiero.

11. A tiny square bag of skin, contents unknown, said to contain medicine for rheumatism, from which the old man suffers.

771

TOTEMS.

Some efforts have been made to elucidate some facts with regard to the presence of a belief in totemism among the people, whose manners and customs are now under investigation. Researches upon this point however are attended with great difficulty, as it is not considered a suitable subject of conversation, and one and all are very reticent upon the point. The natives of the Bantu Kavirondo, Nilotic Kavirondo and Nandi groups all have a belief in the totems or *mosiro*, but, apparently, no such thing as totem worship exists, nor do the Bantu and Nilotic Kavirondo believe in their descent from the *mosiro* or totem, but a Nandi informed me that many of his tribe did believe in their original descent from a totem.

20:Omlnde I-5 (ca. 1948) 1952
FL11 Luo FL11

modern maternity wards have weakened the custom, since women stay in them for seven days and return home after having shown the baby to many of their friends.

Protection against witches. Although Christian mothers are not affected by this kind of superstition, pagan mothers still tie things around the necks of their babies to protect them from malignant glances, these articles being attached when the children are exposed to the view of relatives and friends. Most people believe that babies can be bewitched as soon as their skin begins to darken, and the pagans believe that through magic an ill-disposed person can introduce a worm into the baby's stomach. If this occurs, the baby cries and vomits whenever it is suckled by its mother. In the past when no clothes were worn, it was believed that the mother's breast could also be bewitched. The tradition was that every living person had a beneficial worm in the stomach, and that this worm digested the food eaten. When the worm refused to digest the food, there would be serious stomach trouble which might prove fatal. When a child was bewitched it was believed that its beneficial worm had been replaced by a harmful one.

Protection against this harmful worm could supposedly be gained by scratching the body of the child (the forehead, the palm, or the flat of the foot) with some medicine, and it is still said that, if the medicine is sufficiently strong, any evil-eyed man looking at the child with the intention of bewitching it will lose his eyesight. Some fragments of bones or roots of herbs may also be worn for the same purpose. Many of these customs have disappeared in strongly Christianized areas, the Christians themselves having sometimes taken direct action to stamp them out, but nurses are still warned not to let young children play on the roadside, in order to protect their charges from being bewitched.

4: Hobley G-S (ca. 1900) 1902 FL11 Lan FL11

526 *Games.*—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

727 Upon return from war about two out of every three cattle go to the chief; the chief then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the chief. A man who distinguishes himself in war is also often given a wife without payment.

242 *Food, etc.*—They eat practically all meat except that of the lyena. Some young men eat leopard meat to make them brave in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balearica pilleicapa*) is never killed or eaten by these people.

752 757 *Medicines, etc.*—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poisons, also for abscesses and for purging, but not for diarrhœa. They also have medicine to avert a threatened miscarriage. They profess to have a certain antidote for snake poison.* Venereal disease is practically unknown among the Jo-Luo.

[164]

781 *Before going to war* they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called Odula.

728 *Peace ceremonies.*—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representatives of each side take out a piece and give it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and proceed to sweep up the cattle boma; this will be accepted as a sign of submission.

231 *Killing animals for food.*—They kill cows by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

428 768 *Succession customs, etc.*—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the wives, but the eldest son will probably take the youngest wife of his deceased father.

* After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Rendle, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Physalodonta Alyponinus*, is used internally, an infusion being made from the leaves. The other plant, *Ipomœa palmata*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

FL11 Loc FL11

shave their heads, taking care to keep separate the hair which is cut off. This hair is hidden away in some place near, by preference in a rat-hole or in some hole where it is not likely to be found again.

Birth of twins. At the birth of twins the parents remain together in one house for ten days, and the midwife waits on them. When this time of seclusion ends, a small pot of blood is drawn from the neck of an ox, cooked and given to the parents to eat. After the meal they are escorted to the river, washed, and their heads shaved. Their house is then swept and the floor smeared with cow-dung, and friends come and dance in the village and drink beer. The mother takes the twins a round of visits which lasts several days, but she returns home each night to sleep. At each house she visits the people give her presents of grain. When the visits have been made the mother brews beer with the grain she has received in presents, and her friends again gather to dance and to drink the beer.

Initiation ceremonies. Children live in the same village with their parents and under their control. Until marriage they lead a free and happy life, with few wants and cares. The boys assist in herding cattle, and the girls help their mothers in their fields and also carry wood and water and assist in cooking. Their duties are light and there is no force beyond argument used to make them work. Children imitate their elders in seeking ornaments to wear and in smearing their bodies with oil and red or white paint. When they come to the age of puberty, their four front teeth in the lower jaw are extracted and they are initiated in the customs of the clan. For four days they remain in the house, after which they go about visiting their friends and receive presents of fowls. Girls go through the same ceremony as boys in having their teeth extracted, but, in addition, their bodies are scarified on the sides and back. Should there be excessive haemorrhage when teeth are extracted, the parents send to the man who has the bracelets of the deceased person after whom the boy is named and borrow them, and the youth wears them until the bleeding ceases. When the ceremony of extracting the teeth is over, the boys are sent to live in the boys' quarters

16: Northcote C-5 (no date) 1907 FL11 Lee FL11

The evil eye, it is claimed, can make a [illegible] man sick, and kill a man who is ill, or an unborn child. Most diseases are attributed to the evil eye or to malignant spirits, and so the best remedy is to make as much noise near the sick man as possible, in order to drive the evil ones away. In addition to this universal remedy, the *Salizo* use a considerable variety of herbal medicines, and they are also expert at wet and dry cupping. Sometimes, however, the treatment is of a distinctly quack nature. Some time ago a native practitioner brought a case of assault against the husband of one of his patients. The defence set up was that the accused called in the prosecutor to treat his wife, and that the latter, after much cogitation, ordered the woman to climb to the roof of her hut and stay there till she was better. Unfortunately, the patient died under her open-air cure; her husband laid her death at the doctor's door and took steps to settle his account with the professor of healing arts, with a club. On another occasion the writer was summoned to an accident in the lime quarry in the district. One of the injured was suffering from a broken thigh and internal injuries. He put on a temporary splint, sent for the Indian apothecary, and gave orders that the patient was not to be moved in the "interim." Next day, however, the apothecary found, on arriving at the scene of the accident, that a *Kariwais* surgeon had been called in; the latter was much puzzled by the complications of the case, and, in order to make a better diagnosis, cut the man open, with the not unnatural result that he died.

Yet, although the wizard is held in abhorrence and dread, the rain-maker is greatly esteemed: his success probably depends upon a knowledge of the signs of the heavens, but his methods are as follows: His village is to be found on a rule near a big tree, which he asserts is sacred; when rain is wanted he gathers some herbs and puts them in a large pot containing water, which he boils beneath the holy tree. Of the decoction thus prepared he draws off a little into a smaller pot, above which he squats on his haunches. Next a reed is produced, and through this the rain-maker draws up a little of the liquid and then squirts it forth into the air after blowing through the reed and causing the fluid in the pot to bubble; the whole process being punctuated by volubile mutterings and *abracadabra*. A reputation for necromancy powers, however, can be obtained even more easily than this, as the following anecdote will show. Some time ago, during the lesser rains, the natives of the valley in which the writer's station is situate, came and complained that a famous rain-maker was diverting all the rain to the hills, so that the crops in the valley were dying. Would the Bwana (master) send a policeman and arrest the evil-doer? The Bwana did not see his way to such an arbitrary proceeding, but, being curious to see the wizard, scribbled a few crooked lines on a sheet of paper and told the applicants to show this to the rain-maker as a sign that the Bwana wished to speak with him. Next days they came back and said that the wizard had refused to come for the reason that the letter was not genuine but had emanated from an Indian shopkeeper; the writer told them to wait a few days, meaning to postpone the matter *sine die*. It so happened, however, that that evening a tremendous

776 believed to be the creator and originator of all things but he is not worshipped. Birth and death are ascribed to his action. According to Driberg, Nyasi is found in large trees, and in time of trouble or sickness offerings are made to him of an animal killed under a large tree, the meat to eaten at a little distance away.(1)

[777] Johnston states that the Lan believe in a supreme god, Chiong, which is the name for the sun.(2) Stam, however, relegates the sun to an inferior position and writes that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.(3) Northcote states that Lan worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the new moon appears.(4)

It is impossible at present to give a comprehensive account of Lan beliefs from the scanty information available.

ANCESTRAL SPIRITS

775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost (*jwiem*, pl. *jwiemdi*) and the Lan methods of dealing with it. *Jwiem* is the Lan equivalent of the Shilluk *cim*, the Acholi *lwem*, Lango *tipu* and the Anuak *mrimi*. A spirit which has been forgotten by the living, the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - any of these may become a *jwiem*, and cause harm to those who wronged it. The Lan regard ghosts as one of the principal causes of sickness and other misfortune, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful sanction of conduct within the family and kinship group.(5)

755 775 The diviner (*ajwogo*) discovers the cause of sickness and, if it is due to a particular spirit, sacrifices are offered at his grave with appropriate ritual. If the ghost is not appeased by this attention, another magician is called in, the *magolo*. To protect the sick man's homestead the *magolo* buries in or near it a pot containing medicines. In the last resort the *jwilo* is called in; on to sacrifices and the ghost warned that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 783 Normally, a ghost only haunts a kinsman, but a man who has been murdered may haunt his murderer. Purificatory rites are performed for someone who has killed a man in battle; these are conducted by a man called *jagat* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the gourds used by diviners and answer the questions put to them.

1: Butt E-4 (no date) 1952 FL11 Lan FL11

RAIN-MAKING

Little information is available on the procedure of rain-making among the Lan. However stress that it is an important ceremony and is performed by a certain priest who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Crowe-Pritchard mentions that the Lan rain-maker is called the *mo dorh* and that sometimes his functions are combined with those of the *jakobi*. Rain-makers among the neighbouring Banyo seem to have a higher reputation than Lan *jakobi* and are often consulted.

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witchdoctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a "deeper magic" (*ombogo*) which, among the Ganz tribe is practised by the blacksmiths.(4)

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth.

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances.

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting

[132] trying to work their way into these channels got caught in the traps. On leaving the end of Koch Bay we made for the mouth of the Mitio river. On the way we were much interested in the performances of [134] a kingfisher (*Ceryle rudis*) which flew for some time parallel to the boat and a considerable height above the water. At intervals it would spot a fish, poise itself for a second or two, then drop like a stone perpendicularly into the Lake head first with a splash, to rise again [133] almost immediately and continue its flight. The Mitio is known higher up as the Kipsonoi and Sondo, but is called the Mitio when it passes through the gorge in the escarpment and comes out into the Lake plain. From there it runs through the level country at first between high solid banks, but as it nears the Lake these disappear and are succeeded by dense papyrus swamps. The channel is exceedingly tortuous, in some cases nearly doubling back on itself, and the total distance from the gorge to the Lake is about seven miles. We took the boat about five or six miles up till we grounded on a muddy spot [136] after which we returned down stream. Several crocodiles (Dholuo, Nyang') were sighted on the way up and one varanus (Kalagwana) which is said to eat fish. When we started to float down with the engine running very quietly, we saw more crocodiles lying out on the mud banks, especially on the higher reaches of the river.

These reptiles must destroy vast quantities of fish and as very few of them are shot they are presumably increasing. It took about an hour to get back to the mouth of the river and two hours from there to Kisumu. I saw no otters (Dholuo, Mandebalo) on this trip. Some years ago I saw two swimming in the Mitio river.

The following are the names of the various fish found in the Lake, with a brief description of each of those I have seen. The list has no claim to be exhaustive.

(1) Sirwa. A big fish with a nose and mouth like a trunk. Inhabits the Lake. It is not very popular as food. It is [153] rarely taken in nets or on hooks. A few are taken in traps. Scales very small. Has firm flesh. The natives think that they get fish from eating it. —*Mormyrus sp.*

(2) Nyasa. A carp-like fish. Firm flesh which keeps well. This is the principal food fish of the Kavirondo Gulf and is sent to Nairobi in considerable quantities. It is extremely like the Mbero. —*Tilapia sp.*

(3) Mbero. A good eating fish and very difficult to distinguish from the Nyasa. The only difference appears to be that it is a bit darker and the tops of the spins are reddish. It does not keep fresh so long. A small variety of this fish, possibly its fry, is called Obidi. —*Tilapia variabilis.*

9: Shaw C-5 (ca. 1930) 1932 FL11 Lee FL11

585 (59) bride. It is a curious fact that only young men (*yaopanyo*-bachelors) may eat this part of the animal. The elders told me that in Gem, Alego, Seme, Ugenya, Asembo, Kadimo and Ugunja the breast is set aside to be eaten in the early morning by the friends of the bridegroom. But in Kano, Kisumu, Nyakach, and Kabondo it is used as I have described.

One fore-leg and one hind-leg were sent to the parents of the bride, and two small pieces of the liver were also allotted to them. The rest of the liver was eaten by the elder men living in the dala, and the lungs, heart, and stomach were divided and disposed of in the same way as the liver. The thick part of the stomach was also the perquisite of the elder men, who also ate the contents of the small intestine mixed with blood and used as a relish. This connection was called *kichori* and was highly esteemed. Half of it was sent to the [59] bride's father. Here again there was a difference between the customs of Alego, Gem, Seme, Ugenya, Sakwa, Kadimo, and Ugunja on the one hand, and those of Kisumu, Kano, Nyakach, and Kabondo on the other. For in the former districts *kichori* was eaten by men and women, whereas in the latter districts only the men were allowed to eat it. This difference may well provide an interesting clue to the past history of these two divisions.

The lumpy was divided into two parts, one being sent to the bride's parents, and the other half being eaten by the parents of the bridegroom. The ribs and loins were the portion of the women guests, who were also allotted the kidney and the pancreas which men are forbidden to eat, for fear of contracting the disease known as *kudowodo*. Women with child may not eat these portions in case the child is a boy.

585 591 After the *kiriga* was over the girl was regarded as having finally passed into the fully married state. But even so there were still certain ceremonies which had to be observed before she could take up her residence in her own hut, specially built for her by her husband and there assume the normal duties of a married woman.

The building of this hut was never begun until the wedding feast was over. While it was being constructed the girl slept first in the cook-hut, and later in her mother-in-law's hut; and before it was finished the girl returned to her own home for a short visit, taking with her that part of the dried fore-leg of the bull (*bad jachiera*) which had been set aside for her mother at the wedding feast, as well as other presents of food. It was explained to me that these gifts were 585 in the nature of a compensation to the mother for her absence from [59] her daughter's wedding feast, and they may indicate that in earlier times it was the custom for the mother to accompany her daughter on that occasion. While the girl was at home the mother prepared a

CHAPTER XXVI

SICKNESS, DEATH, BURIAL, WARFARE, INDUSTRIES, RELIGION AND RELATIONSHIPS

Treatment of the sick—ghostly possession—death and mourning—death of a wife—manner of conducting warfare—treatment of a warrior who has slain one of the enemy—agricultural pursuits—cow-keeping—oxen used as riding animals—mode of building—religious beliefs—terms of relationships.

Treatment of the sick. Sickness is thought to be due to one of two causes: it may be, and the people think most frequently is, the result of magic which has been worked by some person who wishes to give pain or even to cause death because of a grievance, real or imaginary; or it may be due to some ghost. Under either circumstance, when a serious case of sickness occurs, the family seek the aid of a medicine-man who by his various tests and incantations discovers the cause; and, in a case where magic has been worked, he not only discovers the cause but also discloses the name of the culprit, who is thereupon sought and asked to give his motive for afflicting the sick person, and is paid to release him from the spell. Should the man have intended to kill the other because he has suffered some discourtesy or received some offence at his hands, he would probably have speared his shadow, so that the sick person will die unless the spell or magic is removed. Again, it may be that some magic has been worked and certain objects have been hidden near the house which are causing the sickness; these have to be removed and the spell broken before any drugs or treatment will avail the sick man. The perpetrator will only remove these when his grievance has been settled and he has received the needful compensation. In the case of a ghost, the medicine-man will tell which ghost is working the trouble and why it is thus causing sickness.

753 ● 755 [754] 753 755 775

FL11 Luc FL11

753 755 775 The ghosts are usually those of grandparents who afflict grandchildren because their father has failed to fulfil the duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order 769 a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

828 775 761 **Ghostly possession.** Fits are supposed to be the manifestation of ghostly possession. They can often be overcome by giving the person warm blood to drink drawn from the veins of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

11: Harvmann M-S (ca. 1930) 1938 FLII Lan FLII

with their buffalo-hide-shields and spears singing all the time. Meanwhile the heads of all the people of deceased's kraal except his wives are being shaven clean, while for this purpose they, in turn, are seated on a log of a doorway, which is put across the main path leading to the village.

On the third day a billy-goat is killed and the meat is cooked and eaten by the women and girls of the kraal only, and an old woman gets the skin of the goat as a new skirt.

On the 4th day the relations go to the grave again and sweep it *(yuoyo lit)* with a special kind of grass, putting some earth of the grave in an old basket. This is put in the middle of the path leading to the village, together with the log of wood (*ritinde*) which deceased used to rest his head on when sleeping. Nobody will afterwards touch these 2 articles; they are left there in the middle of the path. People will in future go past them, making a curve round them. — This explains why one very seldom finds a straight path leading to a kraal. — The hoe, which was used in digging the grave, is given to an old woman of an other part of the district, but the hoe handle is thrown away. Then all the relations living away from the kraal, and all the neighbours go home.

When they have gone, the stick on top of the deceased hut, and those on the huts of all his women are broken by the grandchild of deceased or by some other small boy. This is a sign to anybody that the occupants of these huts are mourning.

After about two months the wives of deceased go to the village of their parents where they stay for two days, and a young bull is killed for them in honour of deceased. Before the wives have been home, they are not allowed to sleep anywhere but in the deceased husband's village, except under extraordinary circumstances, *e. g. if a woman is not able to cross a river on the way home*; in such cases she may sleep in another village, but only in the hut of an old woman. If she would break this rule, then the women in whose hut she slept would not bring forth any children.

Six months later beer is brewed for all the relations and neighbours, who come for the occasion. That day the grave is smeared with mud *(mwomo lit)* and the women get their heads shaven for the first time since the death of their husband. Now also all the wives of deceased are disposed of; they go to either the brothers or the cousins of their former husband. The time of mourning is finished and the sticks are replaced on top of the huts by the same boy who broke them off. That night however the women sleep on the bare ground. That day the women wear new white tassels on their backs. These tassels are made as usual from the round marrow of papyrus stalks or of sisal-fibre. For since the death of their husband they have left off their ordinary tassel, which they replaced by a coarse one-strand one, made of the fibrous bark of the wild fig-tree.

Then new huts are built for the women, if their new husbands live in another village, and when these are ready their former huts are broken down. If their new husbands live in the same kraal they keep their own huts, except if deceased was buried inside his hut. In this case a new hut is built and the old one is allowed to collapse over the grave. If deceased was buried in a little hut built over grave, then this hut is left till it tumbles down by itself. When later on somebody goes

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

768 sick in the village and he witchdoctor says that the sickness is due to neglect of
769 deceased's grave, and that they have to sacrifice a goat or a bull to propitiate him,
then they put some sticks round the grave again by way of a hut, in the doorway
●753 of which they roast a chicken, and some blood of the sacrifice is put in a potsherd
and placed on the grave.

769 On the anniversary of the death or thereabouts beer is brewn again. First
however deceased's son visits the witchdoctor, who tels him to sacrifice a special
782 cock, e. g. a big black one, or one with an extra toe, or one with very short legs,
ect. Until such a cock is found, as indicated by the witchdoctor, the beer will be of
273 no use. Then the chicken is roasted and eaten, except for one leg which is put on
the grave and covered with a basket. Now the *wimbi* for the beer is coarsely ground
and put in pots for fermenting. After twelve days the fermented *wimbi* is roasted
and the next morning dried. Unground *wimbi* is soaked in water, which is strained
off again, and the grain remains for 3 days in covered pots in order to sprout,
after which it is dried. When these ingredients are ready, then the next day another
visit is paid to the witchdoctor, who again orders a special chicken to be sacrificed,
this time e. g. a white one, which is killed and eaten in the morning. Now the
[824 wives and children of deceased only pick some seed-pods of a certain wild plant
301] (*ochok*) which they string like beads on the stalk of creeping grass *(modhono)*.
These strings they put round their necks, and also round the necks of the water-
vessels with which they go to the well to fetch water for the further preparations of
the beer. The water is put out in the sun, and when it has become luke-warm, it
is poured on the fermented *wimbi* in big earthen pots. Next day the sprouted
wimbi is ground and put in the beerpots too. The following morning early the
relations put some of the beer, now ready, in a small vessel, which they put on the
grave of deceased, with a reed in it, after which the people of the village take some
of the beer and drink it. Presently they bring a cock which they suspend by its legs
alive in the gateway of the kraal together with some secret medecine, and it remains
hanging there till sunset. From 8 o'clock in the morning onwards all the relations,
friends and neighbours come to partake of the beer, which is put in an enormus
earthen pot *(mbiru)* in an open space outside, each visitor bringing his own reed
for sucking the beer. Nobody can enter the kraal that day except by the gateway
where the chicken is hanging, all the other entrances being closed up. And the
chicken is hung in such a way that anyone entering has to touch it. Suppose a
[754] person with an "evil eye" would enter for the purpose of bewitching somebody there,
the medicine would start working on him; and he would leave the place with sore
eyes, which would cause him much suffering. If this person, however, returns to the
village, and owns up that he came there to bewitch somebody, he will be asked to
spit on the ground, so that the person bewitched may not die; and doing so his
eyes will heal again.

Beer is supplied to anybody entering the kraal for three days at a stretch.
No food is cooked these days; if some food is brought from a neighbouring village
they may take it but otherwise they live on beer only. All the children of round
about, born about the time of persons death and called after him are carried by
their mothers to this beer party. Each mother brings a cooked chicken and some

775 171 **133** In one form or another the word *cien*, and in some degree the notion of ghostly vengeance for which it stands, have been recorded for a number of Nilotic languages: *cien* for the Shilluk and Nuer, *acien* for the Dinka, *acieni* for the Anuak, *tchien* for the Luo of the Bahr al-Ghazal, *lacen* for the Acholi, and *chyen* for the Lango.

753 755 775 Very little is known about this concept among the Luo of Kenya. Roscoe (*The Northern Bantu*, 1915, pp. 285f. and 289) tells us that sickness may be due to a ghost, and that a medicine-man is consulted to find out which ghost is causing the trouble and the cause of its dissatisfaction. These troublesome ghosts are usually those of grandparents who afflict their grandchildren because their children have been neglectful of filial duties. The medicine-man orders a shrine to be built by the grave of the aggrieved grandparent and the sick person's father there offers a sacrifice. Ghosts may also possess persons and cause them to have fits. When a man kills another in war the ghost of the dead man is thought to cling to his slayer until it is released by ceremonies. Other writers on the Luo do not add to this information, and in view of our ignorance about the subject I record what few notes I have on it.

775 626 A troublesome ghost is called *jacien* (plur. *jociendi*), a word translated 'devil' by the Fathers of St. Joseph's Society (*A Handbook of the Kavirondo Language*, 1920, p. 8). When a ghost is aggrieved it is unhappy among the dead and may cause injury to those who wronged it in life, the verb *cieno* and the noun *cien* being used to describe this ghostly vengeance. In the course of my inquiries I was told that the following are typical reasons for a dead person haunting a kinsman: a man is killed and his kinsmen do not exact vengeance or compensation for his death; a man dies unmarried owing to lack of cattle; a man is blamed for some action and commits suicide; a girl is forced into marriage and commits suicide; a son dies while resentful because his father has favoured his brothers; a married woman dies after being accused of witchcraft and beaten; a man dies in a state of shame for some action of his, or in resentment for some affront; a woman dies after an

[p. 86 B]

775 unsettled quarrel with her husband or one of her co-wives; and a ghost is forgotten by his kin. It is said that if a corpse 626 smells it is a sign that the dead person is ill disposed. As the Luo regard the ghosts as one of the principal causes of sickness and other misfortunes and since it is believed that almost any wrong done to a kinsman may be punished by him after his death, it may be supposed that this representation is a powerful sanction of conduct within the family and kin. I was told that any old person who is neglected may cause a relative to be more attentive by the threat 'You will see me,' meaning that when the person is dead he will haunt those who have neglected him unless they make amends. People who are happy and contented in life do not cause trouble when they are dead. It is the disgruntled and resentful who cause trouble.

●753 Luo who fall sick get a diviner (*ajuoga*) to discover the 755 cause, and if he says that the sickness is due to a particular 775 ghost on account of some grievance they hasten to compen- [787] sate (*colo*) the ghost for the wrong they have done him by sacrificing an animal or fowl at his grave. It is customary to sacrifice a quail or fowl for a sick woman and a sheep or goat for a sick man. When a beast is sacrificed it is first tethered while whoever is conducting the ceremony makes an invocation (*lamo*) over it. If the sacrifice is acceptable to the ghost the animal urinates. They then rub its back (*wiro*) with the moist earth where it has urinated, and afterwards sacrifice it. The meat is eaten by the sick man's kin and a strip of the skin is tied round his wrist.

755 If the *jacien* is not appeased by sacrifice they may get a 775 magician called *mugalu* to protect the sick man's home- stead. He buries a pot containing medicines in or just outside the homestead. If the ghost continues to cause trouble they summon an exorcist (*jadilo*). He first sacrifices an ox and warns the dead man that if he is not content with this sacrifice he will dig up his bones and burn them and throw the ashes into lake or marsh. Luo told me that they prefer to get a Bantu to do this for them, if it is found to be necessary, and that sometimes instead of digging up the dead man's bones the exorcist makes a hole in the grave and pours boiling water down it.

LUO CUSTOMS WITH REGARD TO ANIMALS (WITH PARTICULAR REFERENCE TO CATTLE).

By Walter Odede,*

Veterinary Department, Maseno.

The Significance of Stock to the Luo.

231 The Luo are both pastoral and agricultural people, and so any discussion involving a group of young and old men with 521 regard to the relative importance of animals and crops usually results in an endless debate. As a rule the view is unanimously held by the elders that animals are more important to them than crops; but the young men will often support crops, because since the advent of Europeans to the country the Government has introduced cash crops which are easily grown and marketed to obtain such articles as clothes, soap, lamps, etc. The elders on the other hand support their argument by saying that during a very bad famine poor people die unless they become the servants of cattle-owners who live comparatively normally during hard times. They urge that children brought up in homes where there is plenty of milk grow up finer and more handsome [753] than those in homes where there is only grain. Again those who stress the importance of animals, go so far as to say that [511] women in poor homes develop scaly backs. Poor homes for the Luo are homes where, no matter how much grain is stored, there are no cattle, and women usually run away from such homes. Strictly speaking, the word "rich," when used by a typical Jaluo, signifies a man with a large number of stock.

231 The chief animals owned by the Luo are cattle, goats, sheep and poultry. In discussing the importance and uses of these animals to the people of this tribe it would probably be better to take each of them separately.

262 Cattle produce milk which is a valuable and nourishing food and which has other important uses besides being drunk as such. From it the Luo make butter which is used by women and old men for anointing their bodies. Besides this, butter can be turned into ghee which is the favourite animal product used in cooking. Fresh or whole milk is not drunk by the Luo [272 unless it is mixed with a little sourmilk or buttermilk which has been treated with cow urine. The reason why the milk is 753] not drunk pure is because it is believed that this practice is the cause of human tapeworm infestation. Women and girls who have passed the age of puberty do not drink milk. Stored

*Mr. Walter Odede is a Jaluo who has passed through Makerere College and the Entebbe Veterinary School.—*Editor.*

FL11 Luo FL11

843 262 Dietary restriction may also be a matter of family habit or taboo. Thus a mother may inform her children while they are young that a certain kind of food is not to [753] be eaten by members of their family. This restriction may result from a fear of spreading certain diseases, generally skin ailments, latent in that particular family group. The restriction does not apply to others who are free from the supposed disease. When a woman gives birth to a baby her habits in these respects do not change.

A dietary restriction may also result from the instruction [756] of a medicine man, as in the case of a woman who has had no child for a long time. During his treatment [784] the medicine man gives instruction on taboos and compulsory dietary restrictions. Dislike of a certain food during pregnancy may also result from personal disagreeable experience. This is also generally assigned to the will of the child. Restraints of a family origin, as well as those imposed by the medicine man and acquired from personal experience, are more strictly adhered to than the traditional restrictions.

843 278 177 *Medicinal restrictions.* The list of medicines that expectant mothers may not take is a small one. Apart from the traditional strong purgatives and medicines for killing worms, modern drugs like quinine and strong European laxatives are eliminated, such measures being designed to prevent abortion or premature birth.

843 [177] [516] *Social relationship.* Superstitions affecting expectant mothers have very largely yielded to the influence of Christianity, but we find remnants of old regulations, such as those connected with sitting, still observed by women. An expectant mother is required to sit with a straight back. Neither should she put one of her legs on top of another, because it is believed that the expected child in assuming a similar position would be difficult to

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

modern maternity wards have weakened the custom, since women stay in them for seven days and return home after having shown the baby to many of their friends.

Protection against witches. Although Christian mothers are not affected by this kind of superstition, pagan mothers still tie things around the necks of their babies to protect them from malignant glances, these articles being attached when the children are exposed to the view of relatives and friends. Most people believe that babies can be bewitched as soon as their skin begins to darken, and the pagans believe that through magic an ill-disposed person can introduce a worm into the baby's stomach. If this occurs, the baby cries and vomits whenever it is suckled by its mother. In the past when no clothes were worn, it was believed that the mother's breast could also be bewitched. The tradition was that every living person had a beneficial worm in the stomach, and that this worm digested the food eaten. When the worm refused to digest the food, there would be serious stomach trouble which might prove fatal. When a child was bewitched it was believed that its beneficial worm had been replaced by a harmful one.

Protection against this harmful worm could supposedly be gained by scratching the body of the child (the forehead, the palm, or the flat of the foot) with some medicine, and it is still said that, if the medicine is sufficiently strong, any evil-eyed man looking at the child with the intention of bewitching it will lose his eyesight. Some fragments of bones or roots of herbs may also be worn for the same purpose. Many of these customs have disappeared in strongly Christianized areas, the Christians themselves having sometimes taken direct action to stamp them out, but nurses are still warned not to let young children play on the roadside, in order to protect their charges from being bewitched.

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *won koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted. 789

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witch-doctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' (*jankingo*) which, among the Gemi tribe is practised by the black-smiths.(4) 753 756 [754]

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth. 846

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances. 845

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting [857] 881 304

(4) *The Uganda Protectorate*, Vol.II, 1902.

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

originally came from the north-west. I imagine that the original possessors of these beads had considerable settlements in the neighbourhood of the Maragolia Hills, and that beads were continually being lost in the fields, and now when a heavy thunderstorm comes it washes some of the surface soil away and exposes an odd bead now and again. The supply of the blue Nya-Luo beads is of course quite inadequate for the population, and many make up for the scarcity with the ordinary blue *kiketi* bead.[1] Occasionally these ancient beads are green and yellow, but the usual colour is blue.

The Ja-Luo have a curious habit of shaving curved patterns on their heads (Fig. 11).

FIG. 11.—VIEW OF THE TOP OF A MAN'S HEAD; SHOWING HOW THE PATTERN IS SHAVED.

The young men often wear an armlet of cylindrical wooden blocks on the upper arm; the wooden blocks are coloured red with oxide of iron. A band similarly ornamented with wooden blocks is often worn round the forehead. Some of the older men wear the curved canine tooth of a hippo on the forehead. The tooth is ground down laterally till it is only about one-eighth of an inch in thickness; others wear the tooth of a wart hog attached to a necklace.

The Ja-Luo have a curious habit of standing on the top of an ant hill or in some prominent place on one leg with the flat of the other foot resting against the knee, reminding one of the attitude adopted by a stork; they will remain in this attitude quite comfortably for a considerable time. This habit is I believe characteristic of the Dinka and others of the tribes on the Nile south of Fashoda.

Miscellaneous customs.—If a person shuts the door behind him when he leaves a house, people at once say he is a witch doctor. If a wife does this to her husband, the husband will not enter her house again until she fetches a goat from her father and kills it. Similarly if a man is the culprit he has to kill a goat to avert the ill luck. If a house is struck by lightning and anybody is killed inside, the head of the village walks three times round the house with a red rooster and the house is then broken up and the wood utilized for any purpose.

Witchcraft, etc.—It is believed that people are killed by witchcraft; the person possessing the medicine has only to show it to a person in order to kill him; to save the person bewitched it is necessary to catch the wizard and to bring him to the patient and he can remove the spell, and the wizard has to pay a fine; this class of medicine man does not hide himself. There is a deeper kind of witchcraft which is only practised at night and with great secrecy. It is called Jamkingo; among the Gemi tribe many of the clan previously referred to who forge iron possess these powers.

[1] With the kind assistance of Mr. C. H. Read, of the British Museum, I examined the collections of beads at the Museum from various parts of the world, and I found yellow and blue beads of the exact colour and shape among the Egyptian antiquities and jasper beads identical in appearance to the Nya-Luo both from ancient Egypt, and also from excavations made on the site of some buried cities in Beluchistan.

CHAPTER XXVI

SICKNESS, DEATH, BURIAL, WARFARE, INDUSTRIES, RELIGION AND RELATIONSHIPS

Treatment of the sick—ghostly possession—death and mourning—death of a wife—manner of conducting warfare—treatment of a warrior who has slain one of the enemy—agricultural pursuits—cow-keeping—oxen used as riding animals—mode of building—religious beliefs—terms of relationships.

Treatment of the sick. Sickness is thought to be due to one of two causes: it may be, and the people think most frequently is, the result of magic which has been worked by some person who wishes to give pain or even to cause death because of a grievance, real or imaginary; or it may be due to some ghost. Under either circumstance, when a serious case of sickness occurs, the family seek the aid of a medicine-man who by his various tests and incantations discovers the cause; and, in a case where magic has been worked, he not only discovers the cause but also discloses the name of the culprit, who is thereupon sought and asked to give his motive for afflicting the sick person, and is paid to release him from the spell. Should the man have intended to kill the other because he has suffered some discourtesy or received some offence at his hands, he would probably have speared his shadow, so that the sick person will die unless the spell or magic is removed. Again, it may be that some magic has been worked and certain objects have been hidden near the house which are causing the sickness; these have to be removed and the spell broken before any drugs or treatment will avail the sick man. The perpetrator will only remove these when his grievance has been settled and he has received the needful compensation. In the case of a ghost, the medicine-man will tell which ghost is working the trouble and why it is thus causing sickness.

763 755 [754] 753 755 775

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

768 sick in the village and he witchdoctor says that the sickness is due to neglect of deceased's grave, and that they have to sacrifice a goat or a bull to propitiate him,
769 then they put some sticks round the grave again by way of a hut, in the doorway
753 of which they roast a chicken, and some blood of the sacrifice is put in a potsherd and placed on the grave.

769 On the anniversary of the death or thereabouts beer is brewn again. First however deceased's son visits the witchdoctor, who tels him to sacrifice a special
782 cock, e. g. a big black one, or one with an extra toe, or one with very short legs,
273 ect. Until such a cock is found, as indicated by the witchdoctor, the beer will be of no use. Then the chicken is roasted and eaten, except for one leg which is put on the grave and covered with a basket. Now the *wimbi* for the beer is coarsely ground and put in pots for fermenting. After twelve days the fermented *wimbi* is roasted and the next morning dried. Unground *wimbi* is soaked in water, which is strained off again, and the grain remains for 3 days in covered-pots in order to sprout, after which it is dried. When these ingredients are ready, then the next day another visit is paid to the witchdoctor, who again orders a special chicken to be sacrificed, this time e. g. a white one, which is killed and eaten in the morning. Now the
[824 wives and children of deceased only pick some seed-pods of a certain wild plant

The water is put out in the sun, and when it has become luke-warm, it is poured on the fermented *wimbi*, in big earthen pots. Next day the sprouted *wimbi* is ground and put in the beerpots too. The following morning early the relations put some of the beer, now ready, in a small vessel, which they put on the grave of deceased, with a reed in it, after which the people of the village take some of the beer and drink it. Presently they bring a cock which they suspend by its legs alive in the gateway of the kraal together with some secret medecine, and it remains hanging there till sunset. From 8 o'clock in the morning onwards all the relations, friends and neighbours come to partake of the beer, which is put in an enormus earthen pot *(mbiru)* in an open space outside, each visitor bringing his own reed for sucking the beer. Nobody can enter the kraal that day except by the gateway where the chicken is hanging, all the other entrances being closed up. And the chicken is hung in such a way that anyone entering has to touch it. Suppose a
● [754] person with an "evil eye" would enter for the purpose of bewitching somebody there, the medicine would start working on him; and he would leave the place with sore eyes, which would cause him much suffering. If this person, however, returns to the village, and owns up that he came there to bewitch somebody, he will be asked to spit on the ground, so that the person bewitched may not die; and doing so his eyes will heal again.

Beer is supplied to anybody entering the kraal for three days at a stretch. No food is cooked these days; if some food is brought from a neighbouring village they may take it but otherwise they live on beer only. All the children of round about, born about the time of persons death and called after him are carried by their mothers to this beer party. Each mother brings a cooked chicken and some

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

this tail behind and receives a present from her husband. Afterwards it is considered very bad manners for a married woman to serve food to her husband without putting on this tail. On the other hand, if the husband or any other man should touch the married woman's tail, it is considered that he wishes to bewitch her, and such an offence must be atoned for by the usual sacrifice of a goat.

430. PATTERN FREQUENTLY SHAVED ON MEN'S HEADS (JA-LUO)

The Ja-luo *pull out the incisors* in the lower jaw. It may also occur amongst these people, as amongst the Lango tribes to the north, that not only the four incisors, but even the canines, are taken out, at any rate from the mouths of boys. They *do not circumcise*, nor do they *scar or tattoo* their bodies, with the exception that women raise three parallel lines of dots in a semi-circle on either side of the body, the ends of the semi-circle meeting in front just below the navel, and again on the backbone. If a man has killed an enemy in war, he propitiates his enemy's spirit by shaving his head for three days after his return. Heads of men are also shaved in the pattern given in the accompanying illustration (Fig. 430).

The Ja-luo, together with tribes remotely allied in origin, such as the Sūk and Lango, *ornament the outer rim of the ear* in a remarkable manner. About fifteen small holes are pierced along the edge of the cartilage, and a flattened ring of brass (looking in shape rather like a melon seed) is inserted. Hanging on the outer side of the brass ring is a large blue glass bead. In the lowest hole towards the lobe a plain brass ring is inserted. Regarding these blue beads Mr. Hobley writes: "For a long time I thought these blue beads were ordinary trade beads of the variety known as 'kiketi'; but upon inquiry I found this idea was indignantly repudiated. It was explained to me that the beads were picked up in the fields in the neighbourhood of the Maragolia Hills* after a heavy thunderstorm, and it was believed that they descended with the rain." Some of the chiefs also wear bits of jasper and chalcedony with a fine circular hole. These beads were formerly of great value, and were purchased at the rate of one cow per bead. They are said to have been picked up in the same way. Their name for these beads is

* In North Kavirondo.

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

husband and runs away, the amount which he has already paid on her behalf is returned and the marriage is broken off. If a woman finds herself unmarried after a long period, it is customary for her to go to a chief or a rich man and state that she has come to stay and cook for him. In such case she is usually taken to wife, but a very small complimentary present is paid for her. Chiefs may have from ten to forty wives. The Ja-luo are, generally speaking, very moral. They do not intermarry in

436. EMPTYING THE FISH-BASKETS (JA-LUO)

the same clan, but a man may marry the daughter of one who bears the same name as himself.

The Ja-luo believe in *a supreme God* whom they call "Chieng." This, however, is the same name as the sun. When a man comes out of his house in the morning, he spits towards the east, and in the evening he spits towards the west. If the sunset is extremely red, it is said to indicate the approaching death of an important person. They believe that after death the spirits of the departed go up to the sky. If a hailstorm occurs, no one goes to work in the fields on the following day. Shooting stars are said to be a sign of war. They believe that people can be killed by *witchcraft*, and that a wizard has only to show "medicine" to a person

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

754 [683] in order to kill him. If a person is thought to be bewitched, the medicine man concerned is caught and forced to remove the spell, afterwards being punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkingo." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a 695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

781 As regards *omens*: If a bird sings on the left-hand side as a man 777 is starting on a journey, the journey, if for war, will be unlucky; but if it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that is likewise a bad sign. They profess to be able to foretell events by 787 *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad prophesied the coming of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 [844] On the occasion of a *birth* the infant, if a boy, is kept inside the house for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

together again, and singly or in twos and threes run out and go through a fight with some invisible foes, again presumably, the evil spirits. They are very serious all the while, and the rest watch in silence their champions as they charge, retreat and cower down behind the huge shields. Then comes more feasting, with the customary offering to the sun, and finally they disperse. 764

The wailing is kept up in the case of a chief for six days, and performed twice a day at sunrise and sunset, but after the day of the dance each village mourns by itself; for a common person three days is the limit.

The corpse is buried in a recumbent position in the deceased's hut, but the hut continues to be occupied, generally by the deceased man's heir; it is not at once destroyed or disused, as some authorities, among them Sir C. Eliot, maintain. Last of all, when the mourning is over, an offering of beer, grain, and chicken flesh, is put on the grave.

The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, "It does not matter how much you pray, you fall sick and die just the same." The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits. 776 781 782

Witchcraft, however, and demonology occupy their minds far more. The wizard is greatly dreaded, and it is easy for an unscrupulous Kavirondo to obtain his neighbour's property by accusing him of having killed one of his relations by witchcraft, knowing that he will have his neighbours' support and sympathy. The wizard is sought both for good and evil purposes; his aid is invoked alike to detect criminals and to do harm to an adversary. In a recent case brought before the writer a man was accused of having murdered one of his wives by witchcraft. According to his accusers, the supposed murderer missed his razor and accused two of his wives of the theft. They both denied all knowledge of the missing article, and he gave them till the evening of that day to find it. When their term of grace came to an end, and the razor was not produced, he was alleged to have struck one of his wives, who was on the point of bearing a child. He then produced two charms which he affixed to their respective huts, threatening that the thief would be detected by the charm and would die. Next day the woman who was said to have been struck died after producing a still-born child. The curious result was that the man was tried for murder, the accusers believing that the crime had been committed by witchcraft, and the magistrate holding that, if the man caused his wife's death at all, it was by the blow which he was alleged to have given her. The blow turned out to be a myth, and the man was discharged, much to his accusers' disgust. 754 754 674

When a Kavirondo wishes to kill his enemy secretly, the usual method is to bury a dead rat or chicken at his victim's door. If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day. 754

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

754 The evil eye, it is claimed, can make a sound man sick, and kill a man who is
755 ill, or an unborn child. Most diseases are attributed to the evil eye or to
757 malignant spirits, and so the best remedy is to make as much noise near the sick man as possible, in order to drive the evil ones away. In addition to this universal remedy, the Jaluo use a considerable variety of herbal medicines, and they are also expert at wet and dry cupping. Sometimes, however, the treatment is of a distinctly quack nature. Some time ago a native practitioner brought a case of assault against the husband of one of his patients. The defence set up was that the accused called in the prosecutor to treat his wife, and that the latter, after much cogitation, ordered the woman to climb to the roof of her hut and stay there till she was better. Unfortunately, the patient died under her open-air cure; her husband laid her death at the doctor's door and took steps to settle his account with the professor of healing arts, with a club. On another occasion the writer was summoned to an accident in the lime quarry in the district. One of the injured was suffering from a broken thigh and internal injuries. He put on a temporary splint, sent for the Indian apothecary, and gave orders that the patient was not to be moved in the "interim." Next day, however, the apothecary found, [752] on arriving at the scene of the accident, that a Kavirondo surgeon had been called in; the latter was much puzzled by the complications of the case, and, in order to make a better diagnosis, cut the man open, with the not unnatural result that he died.

789 But, although the wizard is held in abhorrence and dread, the rain-maker is greatly esteemed: his success probably depends upon a knowledge of the signs of the heavens, but his methods are as follows: His village is to be found as a rule near a big tree, which he asserts is sacred; when rain is wanted he gathers some herbs and puts them in a large pot containing water, which he boils beneath the holy tree. Of the decoction thus prepared he draws off a little into a smaller pot, above which he squats on his haunches. Next a reed is produced, and through this the rain-maker draws up a little of the liquid and then squirts it forth into the air after blowing through the reed and causing the fluid in the pot to bubble; the whole process being punctuated by voluble mutterings and *abracadabra*. A reputation for uncanny powers, however, can be obtained even more easily than this, as the following anecdote will show. Some time ago, during the lesser rains, the natives of the valley in which the writer's station is situate, came and complained that a famous rain-maker was deflecting all the rain to the hills, so that the crops in the valley were dying. Would the Bwana (master) send a policeman and arrest the evil-doer? The Bwana did not see his way to such an arbitrary proceeding, but, being curious to see the wizard, scribbled a few crooked lines on a sheet of paper and told the applicants to show this to the rain-maker as a sign that the Bwana wished to speak with him. Next day they came back and said that the wizard had refused to come for the reason that the letter was not genuine but had emanated from an Indian shopkeeper; the writer told them to wait a few days, meaning to postpone the matter *sine die*. It so happened, however, that that evening a tremendous

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 the murdered man, to mourn his death, to placate his spirit,
768 and to retain the grey ash medicine left over from the first
769 cleansing to be used when necessary to remove the danger of his ghost returning to harm members of the clan. An old woman past child bearing, *pim*, was selected and agreed to perform these functions. She was given animals for this service and a hut was built for her outside the village, where she placated the spirit of the dead man.

159 Most Joluo will agree that when a witch is killed, the dead
682 man's relatives do not take legal action but try to cover up the incident. This is not difficult in Luo society. One case did,
754 however, occur during the period of this study which could not be hidden from the authorities.

Case No. 2.

A youth of seventeen was escorting his sister from a marriage ceremony back to their village some miles away. It was late at night or early in the morning, time could not accurately be assessed, when suddenly an apparition appeared in the path of the couple. It was a naked man—swerving, jumping, screaming, and brandishing fire which glowed red as he waved his arms. The night was very dark and to the young couple the apparition appeared as a ghost. The woman fled the way she had come but the youth in his frantic effort to escape stumbled and fell. The "ghost" was on top of him instantly, clawing at his face and throat. The youth had a sheath knife in his belt and frantically struck out blindly several times as he managed to struggle free. He fled back to the village from which he came. A party of youths and men armed themselves and set out to search for and kill the witch but were unable to find the exact spot in the darkness.

159 Next morning a body was found, naked, and with several
682 stab wounds on it. The man was identified, and the finder,

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

propriate prestige of beer parties and entertainment of his father's friends. On the day of the suicide, a group of the father's friends arrived at the village and the father asked his son's wife to prepare food and drink for them. This she refused to do, so that night he burned himself in his house, which the Luo believe brought ruin to the lineage and particularly to his son.

The next case is an interesting one because it illustrates an inherent Luo trait: the profound jealousy of anyone who is successful.

Suicide Case No. 9.

The man who died was the brother of the suicide in case number 2, and took the latter's wives as leviratic wives. He also inherited his gardens. Shortly after this, he began to prosper phenomenally. The elders state that his cattle produced mostly heifers and some produced twin heifers. His crops were better than his neighbors, so they began soon to suspect him of witchcraft. In the space of a few years as his prosperity increased, he was more and more ostracized from the activities of the community. The final blow came when his own *libamba*, minimal lineage group, denied him entrance to a lineage sacrifice on the grounds that he was a witch. Ten years after his brother's suicide, almost to a day, he hanged himself.

When the elders were questioned as to whether or not this man was a witch, they replied that he could not possibly have been a witch, because he had committed suicide. If he were a witch, his medicine would have been so powerful that the effect of being ostracized by the community would not have bothered him at all, let alone driven him to suicide.

The Luo believe that those most likely to commit suicide are those who have descended from a lineage in which there has been a history of suicide. Case number 2 was the brother of case number 9, and case number 5 the son of case number

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

modern maternity wards have weakened the custom, since women stay in them for seven days and return home after having shown the baby to many of their friends.

Protection against witches. Although Christian mothers are not affected by this kind of superstition, pagan mothers still tie things around the necks of their babies to protect them from malignant glances, these articles being attached when the children are exposed to the view of relatives and friends. Most people believe that babies can be bewitched as soon as their skin begins to darken, and the pagans believe that through magic an ill-disposed person can introduce a worm into the baby's stomach. If this occurs, the baby cries and vomits whenever it is suckled by its mother. In the past when no clothes were worn, it was believed that the mother's breast could also be bewitched. The tradition was that every living person had a beneficial worm in the stomach, and that this worm digested the food eaten. When the worm refused to digest the food, there would be serious stomach trouble which might prove fatal. When a child was bewitched it was believed that its beneficial worm had been replaced by a harmful one.

Protection against this harmful worm could supposedly be gained by scratching the body of the child (the forehead, the palm, or the flat of the foot) with some medicine, and it is still said that, if the medicine is sufficiently strong, any evil-eyed man looking at the child with the intention of bewitching it will lose his eyesight. Some fragments of bones or roots of herbs may also be worn for the same purpose. Many of these customs have disappeared in strongly Christianized areas, the Christians themselves having sometimes taken direct action to stamp them out, but nurses are still warned not to let young children play on the roadside, in order to protect their charges from being bewitched.

776 believed to be the creator and originator of all things but he is not worshipped. Birth and death are ascribed to his action. According to Roscoe, Nyasi is found in large trees, and in time of trouble or sickness offerings are made to him of an animal killed under a large tree; the meat is eaten at a little distance away.(1)

[777] Johnston states that the Luo believe in a supreme god, Chieng, which is the name for the sun.(2) Stam, however, relegates the sun to an inferior position and writes that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.(3) Northcote states that Luo worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the new moon appears.(4)

It is impossible at present to give a comprehensive account of Luo beliefs from the scanty information available.

ANCESTRAL SPIRITS

775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost *(jacien,* pl. *jociendi)* and the Luo methods of dealing with it. *Jacien* is the Luo equivalent of the Shilluk *cien*, the Acholi *lacen*, Lango *chyen* and the Anuak *acieni*. A spirit which has been forgotten by the living; the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - any [753 of these may become a *jacien*, and cause harm to those who wronged it. The Luo regard ghosts as one of the principal causes of sickness and other misfortunes, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful sanction of conduct within the family and kinship group.(5) 626]

●755 The diviner *(ajuago)* discovers the cause of sickness and, if it is due to a particular spirit, sacrifices are offered at his grave with appro-775 priate ritual. If the ghost is not appeased by this attention, another magician is called in, the *mugalu*. To protect the sick man's homestead the *mugalu* buries in or near it a pot containing medicines. In the last resort the *jalilo* is called in; an ox is sacrifices and the ghost warned that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 Normally, a ghost only haunts a kinsman, but a man who has been mur-783 dered may haunt his murderer. Purificatory rites are performed for someone who has killed a man in battle; these are conducted by a man called *jagut* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the gourds used by diviners and answer the questions put to them.

CHAPTER XXVI

SICKNESS, DEATH, BURIAL, WARFARE, INDUSTRIES, RELIGION AND RELATIONSHIPS

Treatment of the sick—ghostly possession—death and mourning—death of a wife—manner of conducting warfare—treatment of a warrior who has slain one of the enemy—agricultural pursuits—cow-keeping—oxen used as riding animals—mode of building—religious beliefs—terms of relationships.

Treatment of the sick. Sickness is thought to be due to one of two causes: it may be, and the people think most frequently is, the result of magic which has been worked by some person who wishes to give pain or even to cause death because of a grievance, real or imaginary; or it may be due to some ghost. Under either circumstance, when a serious case of sickness occurs, the family seek the aid of a medicine-man who by his various tests and incantations discovers the cause; and, in a case where magic has been worked, he not only discovers the cause but also discloses the name of the culprit, who is thereupon sought and asked to give his motive for afflicting the sick person, and is paid to release him from the spell. Should the man have intended to kill the other because he has suffered some discourtesy or received some offence at his hands, he would probably have speared his shadow, so that the sick person will die unless the spell or magic is removed. Again, it may be that some magic has been worked and certain objects have been hidden near the house which are causing the sickness; these have to be removed and the spell broken before any drugs or treatment will avail the sick man. The perpetrator will only remove these when his grievance has been settled and he has received the needful compensation. In the case of a ghost, the medicine-man will tell which ghost is working the trouble and why it is thus causing sickness.

753 755 [754] 753 755 775

[P. 285]

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

753 The ghosts are usually those of grandparents who afflict
755 grandchildren because their father has failed to fulfil the
775 duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order
769 a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

828 **Ghostly possession.** Fits are supposed to be the manifesta-
775 tion of ghostly possession. They can often be overcome by giving the person warm blood to drink drawn from the veins
761 of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

12: Evans-Pritchard E-5 (1936)1950
FL11 Luo FL11

775 133 In one form or another the word *cien*, and in some degree the notion of ghostly vengeance for which
171 it stands, have been recorded for a number of Nilotic languages: *cien* for the Shilluk and Nuer, *acien* for the Dinka, *acieni* for the Anuak, *tchien* for the Luo of the Bahr al-Ghazal, *lacen* for the Acholi, and *chyen* for the Lango.

753 Very little is known about this concept among the Luo of
●755 Kenya. Roscoe (*The Northern Bantu*, 1915, pp. 285f. and
775 289) tells us that sickness may be due to a ghost, and that a medicine-man is consulted to find out which ghost is causing the trouble and the cause of its dissatisfaction. These troublesome ghosts are usually those of grandparents who afflict their grandchildren because their children have been neglectful of filial duties. The medicine-man orders a shrine to be built by the grave of the aggrieved grandparent and the sick person's father there offers a sacrifice. Ghosts may also possess persons and cause them to have fits. When a man kills another in war the ghost of the dead man is thought to cling to his slayer until it is released by ceremonies. Other writers on the Luo do not add to this information, and in view of our ignorance about the subject I record what few notes I have on it.

775 A troublesome ghost is called *jacien* (plur. *jociendi*), a
626 word translated 'devil' by the Fathers of St. Joseph's Society (*A Handbook of the Kavirondo Language*, 1920, p. 8). When a ghost is aggrieved it is unhappy among the dead and may cause injury to those who wronged it in life, the verb *cieno* and the noun *cien* being used to describe this ghostly vengeance. In the course of my inquiries I was told that the following are typical reasons for a dead person haunting a kinsman: a man is killed and his kinsmen do not exact vengeance or compensation for his death; a man dies unmarried owing to lack of cattle; a man is blamed for some action and commits suicide; a girl is forced into marriage and commits suicide; a son dies while resentful because his father has favoured his brothers; a married woman dies after being accused of witchcraft and beaten; a man dies in a state of shame for some action of his, or in resentment for some affront; a woman dies after an

[p. 86 B]

775 unsettled quarrel with her husband or one of her co-wives;
626 and a ghost is forgotten by his kin. It is said that if a corpse smells it is a sign that the dead person is ill disposed. As the Luo regard the ghosts as one of the principal causes of sickness and other misfortunes and since it is believed that almost any wrong done to a kinsman may be punished by him after his death, it may be supposed that this representation is a powerful sanction of conduct within the family and kin. I was told that any old person who is neglected may cause a relative to be more attentive by the threat 'You will see me,' meaning that when the person is dead he will haunt those who have neglected him unless they make amends. People who are happy and contented in life do not cause trouble when they are dead. It is the disgruntled and resentful who cause trouble.

753 Luo who fall sick get a diviner (*ajuoga*) to discover the
● 755 cause, and if he says that the sickness is due to a particular
775 ghost on account of some grievance they hasten to compen-
[787] sate (*colo*) the ghost for the wrong they have done him by sacrificing an animal or fowl at his grave. It is customary to sacrifice a quail or fowl for a sick woman and a sheep or goat for a sick man. When a beast is sacrificed it is first tethered while whoever is conducting the ceremony makes an invocation (*lamo*) over it. If the sacrifice is acceptable to the ghost the animal urinates. They then rub its back (*wiro*) with the moist earth where it has urinated, and afterwards sacrifice it. The meat is eaten by the sick man's kin and a strip of the skin is tied round his wrist.

755 If the *jacien* is not appeased by sacrifice they may get a
775 magician called *mugalu* to protect the sick man's homestead. He buries a pot containing medicines in or just outside the homestead. If the ghost continues to cause trouble they summon an exorcist (*jadilo*). He first sacrifices an ox and warns the dead man that if he is not content with this sacrifice he will dig up his bones and burn them and throw the ashes into lake or marsh. Luo told me that they prefer to get a Bantu to do this for them, if it is found to be necessary, and that sometimes instead of digging up the dead man's bones the exorcist makes a hole in the grave and pours boiling water down it.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

754 The evil eye, it is claimed, can make a sound man sick, and kill a man who is ill, or an unborn child. Most diseases are attributed to the evil eye or to malignant spirits, and so the best remedy is to make as much noise near the sick man as possible, in order to drive the evil ones away. In addition to this universal remedy, the Jaluo use a considerable variety of herbal medicines, and they are also expert at wet and dry cupping. Sometimes, however, the treatment is of a distinctly quack nature. Some time ago a native practitioner brought a case of assault against the husband of one of his patients. The defence set up was that the accused called in the prosecutor to treat his wife, and that the latter, after much cogitation, ordered the woman to climb to the roof of her hut and stay there till she was better. Unfortunately, the patient died under her open-air cure; her husband laid her death at the doctor's door and took steps to settle his account with the professor of healing arts, with a club. On another occasion the writer was summoned to an accident in the lime quarry in the district. One of the injured was suffering from a broken thigh and internal injuries. He put on a temporary splint, sent for the Indian apothecary, and gave orders that the patient was not to be moved in the "interim." Next day, however, the apothecary found, on arriving at the scene of the accident, that a Kavirondo surgeon had been called in; the latter was much puzzled by the complications of the case, and, in order to make a better diagnosis, cut the man open, with the not unnatural result that he died.

755 757 [752]

789 But, although the wizard is held in abhorrence and dread, the rain-maker is greatly esteemed: his success probably depends upon a knowledge of the signs of the heavens, but his methods are as follows: His village is to be found as a rule near a big tree, which he asserts is sacred; when rain is wanted he gathers some herbs and puts them in a large pot containing water, which he boils beneath the holy tree. Of the decoction thus prepared he draws off a little into a smaller pot, above which he squats on his haunches. Next a reed is produced, and through this the rain-maker draws up a little of the liquid and then squirts it forth into the air after blowing through the reed and causing the fluid in the pot to bubble; the whole process being punctuated by voluble mutterings and *abracadabra*. A reputation for uncanny powers, however, can be obtained even more easily than this, as the following anecdote will show. Some time ago, during the lesser rains, the natives of the valley in which the writer's station is situate, came and complained that a famous rain-maker was deflecting all the rain to the hills, so that the crops in the valley were dying. Would the Bwana (master) send a policeman and arrest the evil-doer? The Bwana did not see his way to such an arbitrary proceeding, but, being curious to see the wizard, scribbled a few crooked lines on a sheet of paper and told the applicants to show this to the rain-maker as a sign that the Bwana wished to speak with him. Next day they came back and said that the wizard had refused to come for the reason that the letter was not genuine but had emanated from an Indian shopkeeper; the writer told them to wait a few days, meaning to postpone the matter *sine die*. It so happened, however, that that evening a tremendous

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *won koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted.

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witchdoctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' (*jamkingo*) which, among the Gemi tribe is practised by the blacksmiths.(4)

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth.

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances.

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting

843 Dietary restriction may also be a matter of family
262 habit or taboo. Thus a mother may inform her children while they are young that a certain kind of food is not to
[753] be eaten by members of their family. This restriction may result from a fear of spreading certain diseases, generally skin ailments, latent in that particular family group. The restriction does not apply to others who are free from the supposed disease. When a woman gives birth to a baby her habits in these respects do not change.

A dietary restriction may also result from the instruc-
•[756] tion of a medicine man, as in the case of a woman who has had no child for a long time. During his treatment
[784] the medicine man gives instruction on taboos and compulsory dietary restrictions. Dislike of a certain food during pregnancy may also result from personal disagreeable experience. This is also generally assigned to the will of the child. Restraints of a family origin, as well as those imposed by the medicine man and acquired from personal experience, are more strictly adhered to than the traditional restrictions.

843 *Medicinal restrictions.* The list of medicines that expec-
278 tant mothers may not take is a small one. Apart from the traditional strong purgatives and medicines for kill-
177 ing worms, modern drugs like quinine and strong European laxatives are eliminated, such measures being designed to prevent abortion or premature birth.

843 *Social relationship.* Superstitions affecting expectant mothers have very largely yielded to the influence of
[177] Christianity, but we find remnants of old regulations,
[516] such as those connected with sitting, still observed by women. An expectant mother is required to sit with a straight back. Neither should she put one of her legs on top of another, because it is believed that the expected child in assuming a similar position would be difficult to

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

524 *Games.*—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

727 Upon return from war about two out of every three cattle go to the chief; the chief then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the chief. A man who distinguishes himself in war is also often given a wife without payment.

262 *Food, etc.*—They eat practically all meat except that of the hyæna. Some young men eat leopard meat to make them fierce in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the [272 826] milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balaerica gibbericeps*) is never killed or eaten by these people.

752 757 *Medicine, etc.*—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for ulcers and for purging, but not for diarrhœa. They also have medicine to avert [164] a threatened miscarriage. They profess to have a certain antidote for snake poison.[1] Venereal disease is practically unknown among the Ja-Luo.

789 Before going to war they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called *Ochola*.

728 *Peace ceremonies.*—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representative of each side takes out a piece and gives it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and proceed to sweep up the cattle boma; this will be accepted as a sign of submission.

231 *Killing animals for food.*—They kill oxen by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

428 768 *Succession customs, etc.*—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the wives, but the eldest son will probably take the youngest wife of his deceased father.

[1] After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Rendle, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Phytolacca Abyssinica*, is used internally, an infusion being made from the leaves. The other plant, *Ipomœa palmata*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

They suffer not infrequently from pneumonia and other affections of the lungs, and their remedy for these maladies is to pierce a hole in the chest, and even to cut out a small piece of the inflamed lung. They have an antidote for snake poison; *remedies* for diarrhœa, constipation, ulcers; salves for wounds; and even drugs which are taken to avert threatened miscarriage. Venereal disease is practically unknown amongst this people, which, although so indifferent to nudity, is yet too moral to permit sexual intercourse with strangers.

Men and women have the same names. But in many instances,

438. THE GAME OF "BAO," PLAYED ALL OVER EAST CENTRAL AFRICA. (THE PLAYERS HERE ARE YAO SOLDIERS FROM BRITISH CENTRAL AFRICA)

whereas the root of the name is the same, it is preceded by the vowel "O" in the case of a man, and "A" in the case of a woman. For instance, "Opio" is a male name, and "Apio" is a female name.

The games they play are few. There is the well-nigh universal game of little compartments in which seeds or pebbles are put. Boys and young men sometimes play a kind of hockey, knocking about a wooden ball.

After the return from a warlike expedition two out of every three cattle go to the chief, who divides his share with his brothers, and also gives a special reward of cattle to any man who has particularly distinguished himself in war. To this hero a wife is often given for payment.

lips. The mouth is gently raised while a small amount of the gruel is let in. Forcible feeding takes place when children begin to push the container from their lips, preferring their mothers' milk. 853

In forcible feeding, the child's head is rested against the mother's breast while the feet are firmly held in position between her thighs. If the child is difficult to manage, an assistant may be called to hold its hands. The mother rests the edge of the left hand below the child's lips and pours gruel in the hollow thus formed by the hand. While the child is crying, she closes the nostrils by pressing its upper lip against the openings. Thus in attempting to draw air through the mouth the child takes in a mouthful of gruel. The mother or the nurse may then dip her hand in cold water and wipe the child's abdomen in an attempt to cool the rapidly-swallowed food. After it has drunk a considerable quantity the child is set free. If the mother is present, it may finally be pacified by a short period of suckling.

Although women insist on this form of feeding because of its traditional value, it is also a method they use when they are in a great hurry. To have time to do their other work they must feed their children as quickly as possible. A child which has been given gruel does not cry for food for a long time.

The feeding of younger children is generally left to nurses, though often they are very young and lack experience by European standards. Sometimes a child may be found unconscious through over-feeding or prolonged choking. When this occurs, a responsible person holds the child by the legs, head downward, and then runs with it, shaking out the contents of its stomach; after which the child is laid down in a cool place to regain its strength. In extreme cases the child may die. Some children are quite unable to take gruel, and in [854] [757]

795 Lastly, my followers must immediately slaughter all their cattle, sheep, and goats. When this is done, I will provide them with as many more as they want from the Lake." Having said this, the snake disappeared into the lake.

Onyango soon set about spreading his gospel and, as was natural with so attractive a programme, it was not long before he had a considerable following. They were divided into what may be described as two Degrees. The First Degree consisted of those personally "called" [786] in very much the same way as Onyango had been " called." They were all men, mostly older men and the heads of Bomas. The "call" consisted in their throwing some kind of fit, possibly an ecstacy of religious exaltation, during which words poured from them in an [791] unintelligible torrent. They became the priests and were in tremendous demand as witch-doctors since they soon were invested with, or themselves assumed supernatural powers.

761 For example, they were reputed to be able to recall to life a dying
795 person or one who had just died. The procedure here began with the priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called " Buombwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially " Called " by Mumbo himself, and also any other people who, although not specifically " Called," chose to join the cult.

795 At sunrise and at sunset all Mumboites stand facing the sun with
788 the first finger and thumb of each hand meeting to form a circle and held up to the eyes like binoculars. Having gazed at the sun intensely
782 until they are completely dazzled, they stretch out their arms towards it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 As was to be expected from a retrogressive religion which not only
782 encouraged but ordained idleness and uncleanliness, it was not long before its adherents, having nothing to do or to think about, began to
89A indulge in unpleasant practices which the normal Jaluo, however uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

753 The ghosts are usually those of grandparents who afflict
755 grandchildren because their father has failed to fulfil the
775 duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order
769 a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

828 **Ghostly possession.** Fits are supposed to be the manifesta-
775 tion of ghostly possession. They can often be overcome by giving the person warm blood to drink drawn from the veins
761 of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

would have supplied sufficient food for the whole village (about 50 people) for 3 months. — When all the beer is finished the bridegroom's father asks his host whether his son may now build his wife a hut, and whether she may stay with him definitely. The worthy parent will answer: "No, not yet, because the heifer for the father of the girl *(roch wuoro)* is to be brought still." 585 273

Now the relations of the bridegroom go home taking a hindleg of the cow along, which is to be carried by the bride. But she will say: "It does not behove that I should walk along the road with my father-in-law; I will come later." Somebody of the party carries the leg, and she follows next day. Henceforward she is allowed to enter her mother-in-law's hut, where she does the cooking for her husband, and stays no longer in the simba. Unless she is with child already she goes home again after a few weeks, because her father has not quite released her yet, and she still plays about with her girl-friends. 585

When her husband has found the heifer still wanted by her father, he takes it to him. Again he asks leave to build a hut for his wife. If the father agrees he returns with his wife and starts building at once. The woman stays with her husband definitely, for the full dowry has been paid.

Some time later the woman's father brews beer and sends word to his son-in-law, who gathers his brothers and friends to go to this beer party *(kisech kongo)*. All of them except the husband himself go to the hut of his mother-in-law, where the beer stands ready. Not until he has given her either a goat or a sheep is he allowed to enter. This animal has to be handed over not by the husband himself, but by a relation of his. With this beer party the full marriage ceremony ends.

The woman, though she has her own hut now, goes on cooking in her mother-in-law's hut. Five months after she has conceived she has regularly to take *yeath agula* which medicine has to be warmed up every time before taking it. This she does in her own hut. However, the evening before she boils this medicine for the first time, the children of the kraal pick some vegetables and cook them in the woman's hut. This is the first food cooked there. Both husband and wife, and also the children who cooked them partake of these vegetables. [843]

From now onwards she cooks all the food in her own hut, but her husband is not allowed to eat any of it yet. He goes for his meals to his mother's hut. After about 4 days the woman goes home once more to fetch a goat for her husband. With the goat and also some other meat and fish she returns to her husband. When this food is cooked she calls her husband and the men of the village for a little feast. On this occasion she gives the goat to her husband, thereby sealing the contract with him *(criso chwore)*. [574]

Burial of a married Man.

In the olden days the death of a warrior was considered to be brought about by some enemy through witchcraft. This death had to be revenged. So the very next morning, before the man got buried, people got ready for a fight, and went out to the boundary of a hostile tribe to wage a war against them. No sooner was the warcry raised or the hostile tribe got ready too, and came to the boundary. Both parties took some of their cattle with them. After the fight the victorious party took the opponents cattle as spoils. 761 764 721

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

761 [763] which is the infidelity of the spouse of the deceased; in the case of a child, by the adultery of its mother. Ritual cleansing of the members of the minor lineage is therefore necessary, as for kuer.

159 674 628 I mentioned above a classical case of homicide which illustrates what the Joluo regard as a calculated risk of the consequences. It deserves fuller analysis.

Case No. 1.

This case involved a group of nine related men. Only one of them was convicted, and he eventually was acquitted on appeal through lack of corroborative evidence.

A quarrel began between members of two major clans of the same tribe over the appointment of an assistant chief. The clan from which the assistant chief was appointed—we shall call it Jokoth—is alleged to have taken advantage of the clan—which we shall call Jokech—which was unsuccessful. The clans feuded in every way, over land, cattle grazing and so on, until the elders of Jokech decided, as a warning in the ancestral way, that they should burn the hut of a leading elder of Jokoth. This was done. The assistant chief arrested a member of clan Jokech, a person with whom he is alleged to have had a personal grievance, and this man was convicted of the burning and sentenced to a term of imprisonment. His sons fought hard and long to have him released on grounds of ill health and, when finally successful, took him home only to have him die shortly after. On his death bed, he made his sons swear to avenge his death.

Diviners and medicine men were consulted, and many methods were tried unsuccessfully for several years to bring clan Jokoth to its knees and to bring about the death of the assistant chief who had by now retired.

All was not well with the affairs of Jokech clan. Each new catastrophe was taken as evidence of the malevolence of the ghost of the deceased because his death remained unavenged.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

853 when a mother is eating she will hear her child cry out
[854] for some of her food.

From six to nine months, gruel continues to be the staple article of diet. In certain strict families adult food is not given until the child is over a year old. Babies fed on cow's milk begin using adult food during the first or second month.

[784] *Restrictions on the suckling of babies.* It is considered a breach of taboo for a nursing mother to suckle her
[761] neighbour's child. This restriction is based on the fear that some woman with poor milk may, in suckling a
[177] baby, kill it. One of my informants pointed out that in the early days of missionary work an attempt to break this taboo had failed. She said that many of the children thus suckled had died, and the attempt had been aban-
[603] doned. One exception to the restriction, however, is that of a mother-in-law. In cases of necessity she is permitted to suckle her daughter-in-law's child because it is assumed that her milk has stood the test.

853 In rare instances there seems to be different treatment
595 of male and female children in a polygamous home with regard to suckling. Some of my informants stated that inter-suckling is permitted if all the nursing mothers have female babies.

[587] Nevertheless, the taboo against inter-suckling of male babies is reinforced by the fact that it is possible for a son to marry one of his father's younger wives. Hence a woman refuses to suckle a child who might become her husband on the death of the father.

853 The social restriction with regard to the suckling of
[177] infants is still observed with rigidity, and there are no evidences of a change even under the impact of modern ideas.

Methods of feeding. No force is used in feeding young babies. A little gruel in a small container is put to the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

765 she makes a new girdle from papyrus while still at the river, and wears it as she returns to her village. She is then free to remarry.

775 Dead people are sometimes said to come to life again. This is reported to take place within a short time after death. It is said that the spirit had gone on a journey and had returned after the man was thought to be dead, but in time to stop the funeral. The supposed dead person sneezes and revives, the sneezing being thought to be the signal that the spirit has returned from his journey.

764 **Death of a wife.** Should a wife die before her husband, her body is buried in the house, and, when the husband dies, he is buried in the goat-house near. He may not be buried in the same house with his wife. The animal offered at a man's funeral is always an ox, while it is an old cow that is offered at a woman's funeral. The skin from the animal is used to wrap the body as a shroud. The meat from the animal is divided in the following manner: a shoulder is retained for the dead and is eaten by the mourners at the grave, the second shoulder is for the relatives in the village, and the remainder, with the exception of the neck, is for the guests who live at a distance: the neck is given to the medicine-man.

766 762 A suicide is buried in the open, never in a house. Should the death have taken place in a house, it is burned down, for no one will live in it.

Warfare.

721 **Mode of conducting wars.** The people are not fond of war and fortunately their wars are never very serious matters. Cattle-lifting and women-stealing are the chief causes of fighting. The battles take place after short notice, when it is found that cattle have been robbed or when the alarm is given that a woman has been captured by some other clan. When a fight is impending, the attacking party drive a few cows to some spot where the other party may see them and challenge the others to come and take them. The party challenged must either attempt to carry off the cows while the others protect them, or they must pay a fine imposed by the attacking army.

Homicide and Suicide among the Joluo of Kenya

SUICIDE AMONG JOLUO

We have discussed the Luo attitude toward death at some length in our description of homicide. These attitudes apply equally to suicide, except that they are extended to an association of the idea of death and its concomitant link with the supernatural to self-destruction, as an assurance or determination on the part of the individual to hasten the day when supernatural forces can be made to bear on the frustrations which led up to the act of suicide. The motives for suicide are thought to be to avenge the deed by the malevolent supernatural forces which at death become allied to the dead, who are able to use them against those on earth to solve problems which they found beyond human solution.

Throughout childhood there is constant reference to suicide, and in adolescence, early marriage, and old age the threat of suicide is an effective technique used by the Joluo to achieve goals or to avoid distasteful consequences. Threats are not often put into practice because they are used only when their effectiveness is relatively assured.

Unfortunately for the student, suicides are not usually reported to the authorities, although legally they should be. Therefore, few cases are recorded as in advanced countries in the coroner's court. The Joluo believe that suicide brings *chira* to a large segment of the clan of the suicide, and it is therefore kept as quiet as possible and dealt with immediately by the clan elders and clan medicine men, *jobilo*. The family of the suicide are forced to perform cleansing rituals and ceremonies before they may again participate in the social life of the clan. Data are for these reasons hard to collect. The few cases which were brought to the attention of the authorities were only those suspected of having been cases of murder which were made to look like suicide.

During a two-year tour among the Joluo tribes of Central Nyanza, I was able to collect 220 cases from informants. Of

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

this number, 90 were male suicides and 130 female. I have selected for the purpose of this chapter 10 male cases and 13 female cases as typical, and these were investigated in more detail to provide examples. Considerable time was spent among the villagers in each case, and full discussions were held with the elders in an attempt to determine the motive and the events which led up to the suicide. For obvious reasons, I shall not use correct names when describing these cases.

MALE SUICIDES.

Male suicides in Luo usually follow loss of status. Seven of the ten cases can be so classified. The first five are of the type which involved intense emotional feelings of shame, loss of honor and status within the framework of the indigenous culture. Following these are two case histories of suicides which involved loss of status in the acquired or modern sense. Two cases will be described which involved the loss of status through poverty and the loss of traditional respect of sons, and finally one case which resulted from social ostracism.

The first suicide concerned a man whose younger brother married before he did. In Joluo society, men of the extended family marry in strict order of status, that is, the senior son of the senior wife must marry first. It may happen that he is younger in chronological age than, perhaps, a son of a more junior wife, but even in this circumstance, the younger son in years, who is senior in status, is technically married before his brother—that is, the payment of the first animals for a young girl allow the senior son to marry.

Suicide Case No. 1.

A young man who was the senior son of a senior wife was chronologically the oldest of all the sons in the village. His father and mother were both dead and, although he would eventually become head of the homestead, until he married he was regarded as a juvenile.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

was regarded as a juvenile. The homestead was supervised by the levir of his father's second wife. The young man desperately wanted to marry. His stepmother, however, had spread the rumor that he had had syphilis. Therefore none of the eligible girls would have him. He went to a medical dispensary off and on for several months but treatment was not successful.

While he was away, a half brother, the son of the senior living wife of the village, married without his knowledge. The young man obviously had been under intense emotional strain caused by the rumors and gossip associated with the fact that he had a venereal disease. He was the senior son by Luo customary law and on marriage would be the head of the village. His half brother had taken a wife. This added to the humiliation and shame and would bring ridicule upon him whenever he met with his contemporaries for the rest of his life. This was too much. He went to the *thim*, the no man's land surrounding his clan grazing area and the place where the ancestors are normally placated, and there hanged himself from a tree.

His brothers and relatives were concerned about his absence and suspected what he had done. He was found by one of them after many days and his family and minimal lineage group completely destroyed the tree, including the roots, and there on the spot buried him and performed his funeral rites. The family was cleansed by the *jabilo* and the ancestors placated to receive his spirit by the sacrifice of a white cockerel and a black sheep.

The first son to be born to his brother's marriage was named after him to placate his spirit and to continue his name in the lineage genealogies.

Naming a child for a relative who had died is used by the Joluo in many ways, but only after consultation with the *jabilo*. It is obvious therefore that any misfortune which occurred to the family or to the lineage segment after this suicide was attributed to it. The fact that the first child born after the suicide

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 553 was given his name reveals their attempt to avoid the consequences of his act.

762 159 684 [178] The second case arises from a breach of customary law which in the old days would have meant banishment but which today brings social ostracism.

Suicide Case No. 2.

The suicide was caught in the act of intercourse with his full brother's wife. The Luo believe that such an act involving members of the same *Jokamio* (that is, those descended from the same mother or grandmother) brings *chira* to the whole clan. The security and solidarity of family relationships are [578] threatened by the act because it involves quarrels which may lead to violence within the primary segment of the clan. In this case the brother did not tell the elders of the clan but merely threatened to do so. The guilty man returned to his own homestead and hanged himself in his hut. The house was destroyed [783] and members of the extended family were cleansed by the *jabilo*. The cleansing ceremony took the same form as in the first case, with the addition that the village was sprinkled with medicine in order that it might continue to be used by the dead man's family.

In the next case there are two clear motives which led to the suicide. The first, perhaps the most important, lies in indigenous beliefs and attitudes, while the second lies in more modern attitudes.

Suicide Case No. 3.

159 762 556 [661] This Luo was about 30 years old and had been employed as a driver for the Government for many years. Drivers in Kenya receive a relatively high salary, and in addition some take advantage of their position and make extra money by illegally charging people for transportation. Through these activities, he became a relatively rich man and was able to marry a total of five wives at his comparatively young age. He was also wealthy

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

in cattle, and had a permanent modern house at his homestead where four of his wives cultivated large gardens. His fifth wife lived with him at his place of employment. At the time of his suicide he was in the process of marrying a sixth wife when, during one of the marriage ceremonies at her village, a brother of the bride objected to her becoming his wife. He charged that the man had already too many wives and could not look after them. As proof, he offered the evidence that his most recent wife, the fifth one, was no more than a prostitute and that he, himself, had used her on several occasions. This caused a fight in the village and quarrels which led to the exchange of many curses between the two groups, and therefore the wedding could never take place. The driver returned to his homestead to confront the wife named in the incident with the accusation and, in typical Luo fashion, she calmly admitted her guilt, chiding him to do something about it. He beat her severely and she ran from her house and spent the night in the bush. He brooded all night on what had happened and on the shame his wife had brought him. Moreover, he knew that he was shortly to be accused of fraudulent conversion of funds by the Government and would lose his job, if he did not end up in prison: neither of which were considered really serious. However, in his emotional state, these must be considered as contributory causes. He could see his whole world collapsing around him.

The next morning he sent his servant, a young lad, to the butcher's shop for meat in order to get him out of the way. He then hanged himself from the ceiling of his hut.

My Luo informants state with confidence that the prime cause of this suicide was the behavior of his wife, which had brought shame to a proud and successful man, so that he could no longer face his friends. The fact that the Government was interested in recovering a large sum of money which he was alleged to have used for his own purposes is, in my opinion however, a contributory factor.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

Suicide Case No. 4.

762 159 584 A young lad aged about 23 years was being married to a girl from a neighboring location. He had paid a portion of bride-wealth and many of the early ceremonies had been performed. His bride had returned to her home as is the custom until he had paid the remainder of the bride-wealth. He went to his father-in-law to discuss the last and final payment, with his *jagam* as witness, and the father-in-law agreed that a milch cow would complete the payment. He returned in high spirits to the home of his father and asked for the cow, stating that this was all the father-in-law demanded. His father told him that if he had not paid enough, then the father-in-law must be a bad man and the girl was not worth having. The father and the son quarreled, and during the quarrel the son threatened suicide if he did not get the animal. The next day the son took a cow by force, while his father was absent, and sent it off to his father-in-law by a group of herd boys. When the father returned, he was furious at what his son had done and went after the cow himself. He caught up with the boys and brought the cow back to the village.

159 762 The son had warned his father that, if he should take this course, he would hang himself, and, as he saw the father returning in the distance, he hanged himself from a tree which stood just outside his father's village. This tree, as is the custom, was completely uprooted and destroyed.

762 159 684 The next cases are two which were due to modern circumstances but which in a sense involve the loss of status and therefore brought shame to the individual.

Suicide Case No. 5.

A young man eloped with the wife of a Kikuyu in Nairobi, far from his homeland. Whereas in Luo customary law to run off with the wife of another man is not considered to be particularly serious, in Kikuyu customary law it is regarded as

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 ●
159
684

a criminal offense. He was caught, and the Court fined him a relatively large sum of money and gave him thirty days in which to pay. He became very depressed and, after unsuccessful attempts to raise the money, he hanged himself.

Suicide Case No. 6.

159
762
685

The man involved was in his early thirties, and was in a position of trust with a Local Government body in Nyanza Province. He was alleged to have abused his position of trust by embezzling a considerable sum of money. The auditors had come across this defalcation in the books and brought it to his attention, but before he was arrested he killed himself by falling on a knife. Both the cause and the method can be said to be modern.

159
762

Case numbers seven and eight involve a loss of status, but on the other hand are attributable to poverty.

Suicide Case No. 7.

[888]
[626]

An old man whose wives had all died had to depend on his sons for support. The sons supported the old man while in his village but, after a quarrel, built a new village of their own and refused to build a house for him. As he had no one to support him and as he felt that he was ostracized by his sons, he had, to quote the Luo elders, "No other recourse than to commit suicide. His sons killed him and will suffer." He hanged himself on a thick tree which grew by a river, where he was found by an ex-chief. The Luo elders were quick to point out that he achieved his revenge, because the descendants of his sons were already few in number and mostly girls. "The line will die out because they killed him."

Suicide Case No. 8.

The man in this case was a widower living with his only son, who gave him food, but could not afford to maintain the ap-

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 762 propriate prestige of beer parties and entertainment of his father's friends. On the day of the suicide, a group of the father's friends arrived at the village and the father asked his son's wife to prepare food and drink for them. This she refused to do, so that night he burned himself in his house, which the Luo believe brought ruin to the lineage and particularly to his son.

762 159 556 754 The next case is an interesting one because it illustrates an inherent Luo trait: the profound jealousy of anyone who is successful.

152 ## Suicide Case No. 9.

[587] The man who died was the brother of the suicide in case number 2, and took the latter's wives as leviratic wives. He also inherited his gardens. Shortly after this, he began to prosper phenomenally. The elders state that his cattle produced mostly heifers and some produced twin heifers. His crops were better than his neighbors, so they began soon to suspect him of witchcraft. In the space of a few years as his prosperity increased, he was more and more ostracized from the activities of the community. The final blow came when his own *libamba*, minimal lineage group, denied him entrance to a lineage sacrifice on the grounds that he was a witch. Ten years after his brother's suicide, almost to a day, he hanged himself.

When the elders were questioned as to whether or not this man was a witch, they replied that he could not possibly have been a witch, because he had committed suicide. If he were a witch, his medicine would have been so powerful that the effect of being ostracized by the community would not have bothered him at all, let alone driven him to suicide.

762 159 828 The Luo believe that those most likely to commit suicide are those who have descended from a lineage in which there has been a history of suicide. Case number 2 was the brother of case number 9, and case number 5 the son of case number

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159
762
828

9. This example is used time and time again by the Luo to prove the point that the tendency to commit suicide is inherited or caused by ancestors.

I was able to follow one particular series of events in connection with Luo marriage laws and customs over three years, which began with the elopement of a girl and her lover, and ended in suicide only a month before this chapter was written.

584
159
762

Marriage in Luo is traditionally arranged by the family of the boy and the family of the girl. Not infrequently, because of debt or close friendship, a father may promise his daughter in marriage to a friend or creditor while the girl is still very young. He obtains the animals to which he is entitled (*dho i keny'*) approximately one half of the final bride-wealth, at that time and the girl is known as *nyar kiseke,* "the wife of the beer reed," as this arrangement is usually contracted and finalized at a beer party. So it was in the case we are about to describe.

Suicide Case No. 10.

The girl in this case had been promised by her father when she was but three years of age to a friend of his own age group. The father, Opio[2], was a well educated Jaluo, and by the time his daughter, Akech, was ready to be taken in marriage, at the age of 18, he was employed as the headmaster of an intermediate school administered by a local mission. He had insisted that his daughter be educated to enhance the final payment (*dho miluhini*) of her bride-wealth. She was, for an African woman, a well educated girl. She had received a secondary school education where, in this particular segment of the Joluo tribe, fewer than 1 per cent of the girls have had as much education.

[871]

Akech had been prepared for this event all her life. She knew her future husband and from a child, each time he visited

[2] All names are fictitious, but common Joluo names.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 159 584 the village, she would be teased and chided pleasantly about the fact that he was her future husband. Perhaps she would have been married sooner, had her future husband, Opala, not been employed in a city many hundreds of miles away. He returned on his long leave to consummate the marriage at the time when the girl had just finished her secondary education and was about 18 years of age.

While at school, however, Akech had fallen in love with a teacher, Okare, in a neighboring technical school and he was determined to marry her. He went to her father and pleaded to be allowed to repay the bride-wealth animals her father had received years before and to complete the bride-wealth payments to marry the girl by Luo law and custom. Opio adamantly refused, and her brothers threatened Okare with physical violence if he should try to see the girl again. Okare was heartbroken and returned to his place of employment. Akech, however, had other ideas. When she was told that the date of her wedding had been fixed, she pleaded and tried every traditional way of breaking the marriage, but was unsuccessful. Her father and her prospective husband remained adamant.[3]

159 762 584 684 The night before the wedding, she ran away from home to join Okare at his place of employment. Both knew that they would be pursued by the girl's brothers and by her father, so they hired a car and fled to the boy's village in a distant Luo tribe, some 200 miles away. Her father, brothers and future husband pursued the lovers to Okare's village where the father had him arrested for taking Akech from his custody. Okare's brothers, however, took the girl to Nairobi to hide her pending the result of the case. One of the brothers was then arrested for aiding and abetting the elopement.

Now the essence of this case goes to show that the father

[842] [3] By tradition, a girl may run off to the home of a "bride," thus to marry will produce sterility. She may climb a tree *bondo*, an *euphorbia*, which is believed to be closely associated with the ancestors. There are several other ways, all of which would cancel an ordinary wedding, but none is effective in the case of *nyar kiseke*.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

wanted the best of two worlds. Traditionally, elopement (*por*) is justified and is legal, albeit more difficult in cases of *nyar kiseke*, providing that the young man has stated his willingness to pay bride-wealth and has been refused. Moreover, it is the last remaining traditional way by which a young woman, forced to marry against her will, is able to break the arrangement. Today, however, because there are so many illegal unions, the African courts take a serious view of young men and women running off to the towns without the slightest intention of paying bride-wealth.

While Okare and his brother were retained in gaol, pending the case, the girl's father and her brothers went to Nairobi, where they found the girl after some difficulty and took her back to her village by force. There they married her to Opala and he, with two of her brothers, took her by force to the place of his employment which was in another territory nearly 700 miles away.

Opio, who was an influential man in his district, then proceeded with the case against Okare and his brother. The Court decided in favor of Opio, ordered compensation for the expenses he had incurred securing the return of his daughter. Okare and his brother were heavily fined for having taken the girl from the protection of her father. The compensation and the fine amounted to a very large sum of money and the boy appealed to the District Officer's Court. Pending the Appeal, he went to search for new employment at Nairobi. Akech, in the meantime, had arrived at the home of her husband in the far away city, only to find that he was already married and that his first wife, as a Christian, refused to have her in her home. Quarrels and arguments began in earnest, with the result that Opala had no alternative but to send the girl back to her father and to demand a divorce. Akech, however, did not go home but returned to Nairobi to Okare.

The father heard what had happened and, in the shame and humiliation, hanged himself in a classroom at the school

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 where he was headmaster. His final act was to write to all those involved in this series of incidents, which had taken nearly 762 three years, to the effect that his daughter had killed him, that shame was brought to his clan and lineage, and that the liaison she had formed with Okare would end in disaster. He swore he would return in spirit to ensure that the marriage would end in failure.

159 762 558 797 It can be seen from this case that the difficult transition faced by even the most educated Christian Jaluo is complicated by the intense residual customary law and the attitudes of the people regarding the authority of a father and the duty of his daughter to this authority. The father in his case was a well educated, highly respected, important person in his district. The daughter, by her behavior, had humiliated him and he took recourse in indigenous rules and beliefs to solve his problems. They were initially successful. In the end, however, the threat to his status as a Christian of the fact that he had married his daughter by force to a Christian who was already married and therefore a bigamist in the eyes of the Church, brought shame and disaster to his social position as a Christian headmaster. His final act, however, was typically an indigenous one. He would not face the shame and humiliation brought to him by the course of events, so he took refuge in traditional recourse to suicide as a curse to the future happiness of those whom he thought had caused his grievance. To the end, therefore, he struggled to obtain the best of two worlds.

FEMALE SUICIDES

762 The most common cause of suicide among females is domestic quarrels and, coupled with that, the fear of physical violence from their husbands. Secondly, jealousy between co-wives; thirdly, the result of extreme grief, and finally, illness.

In the first category, out of the thirteen cases recorded from our sample, seven were of the domestic quarrel type. Of these, one was complicated by a curse from the husband, another

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

from the fear of consequences arising from the behavior of her son and, in two cases, there was a suspicion that the women did not in fact commit suicide, but were murdered by their husbands in such a way that it looked as if they had committed suicide. 762 ●

Suicide Case No. 11.

A young woman was accused by her husband at a beer party of having slipped quietly out for intercourse with a man from the village. To prove that she was innocent, she hanged herself on a tree which was near the homestead. If she had been guilty, the Joluo argue, "she could have been cleansed, but she could not be cleansed for having done nothing." 762 159 684 783

Suicide Case No. 12.

A young wife, newly married, had offended her husband in some way and he refused to eat her food. (This is a customary curse and is a very severe punishment to a wife.) She threatened to kill herself if he did not eat it. He then took the food to the senior wife, who ate it, adding insult to the injury already done. The young wife went to her hut where she stood on her grinding stone and hanged herself from the roof. 762 159 578

The elders were quick to point out in this instance that since her death the village had been abandoned and many children of the lineage had died. All this, they believe, was caused by the ghost of the abused wife. 762 159

The third case involved a young girl who committed suicide because she did not wish to marry the person chosen for her by her parents. 762 159 584

Suicide Case No. 13.

A very young girl, little more than a child, objected in the traditional way to the union which her parents had arranged.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 159 584 The parents insisted that she be sent or "dragged" to her husband. On the night of the ceremonial defloration she committed suicide by hanging. This act is said to have brought a curse, not only to the prospective groom's homestead, but also on her own minimal lineage. Her mother was so struck by grief that she committed suicide later. The mother's case will be discussed below as case number 21.

The next two cases are those where foul play was suspected.

Suicide Case No. 14.

762 159 578 A woman was found hanging by a rope at night by her husband. He dug her grave and had buried her in the morning. In evidence given at the preliminary inquiry witnesses testified to the fact that she and her husband quarrelled some hours before her death, as the result of a beer party, and that she had left early for her own village. The body showed signs of having been beaten, but her husband argued that he had beaten her after she had hanged herself, as is the custom of the Joluo.

The case was not tried for lack of evidence, and the husband's family believed that she did in fact commit suicide, whereas her family believed that she was murdered.

[583] It is significant to note that the husband did not claim the return of bride-wealth, as he would likely have done had it been a clear case of suicide. Neither did her family offer to repay the bride-wealth, or to give another girl in lieu of bride-wealth, as they might have done had the husband been clear of blame.

Suicide Case No. 15.

762 159 595 A woman had quarrelled with her husband because she alleged that he would not give her her proper share of sexual pleasure. The argument involved other wives and they told this woman that her husband hated her and that she would be better dead. The next morning she was found on her bed, having been killed by a knife or having inflicted a fatal wound on herself with a knife.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

Homicide and Suicide among the Joluo of Kenya

As in the previous case, the woman's family believed that she was murdered and the man's family believed that she committed suicide. It is difficult to say which version is true. It is extremely unusual, however, for a woman to kill herself with a knife, and I have not recorded another case. There was one case among the men, Number 6, but this was a modern "intellectual," who lived in a Council house with a plastered ceiling, which was hardly suitable for hanging in the traditional way.

The next case is the one mentioned earlier involving a woman's fear of the consequences of her son's behavior.

Suicide Case No. 16.

The woman in this case was the wife of a squatter who was a servant to an important Chief. The Chief helped him to get married to this woman, a local girl who was in fact related in some way to the Chief. After his establishment as an affine of the Chief, the *jodak* became very wealthy and built his own village on a place allocated by the Chief. He married a second wife after the building of his village and, just before the case we are discussing, married a third wife. The first wife had many children, most of whom were daughters. At the time of her suicide, all but one had married and her house was very wealthy. The houses of the other two wives were therefore extremely jealous.

One day during the short rainy season, the owner of the village, the husband, wished to make a present of *sim-sim* to his Chief and benefactor in order that he might pay the tax which at that time was calculated on the number of wives and also to pay the traditional tribute to the Chief. The woman's son at about that time invited a large number of guests to his village and demanded that his mother give him *sim-sim* with which to entertain them. She refused because she knew her husband intended to use the entire crop. The son disobeyed

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 his mother and took the *sim-sim* by stealth. When the hus-
159 band came to collect it for the Chief, he found that a large por-
[595] tion of it had disappeared. This caused a bitter quarrel be-
tween him and the boy's mother.

In fear of the consequences of what her son had done, the woman placed a rope, which was used for tying up one of her cows for milking, in a small basket and went out of the village as if to collect vegetables. She went to one of the largest trees in a nearby valley which was hidden from sight by thick bush and there hanged herself. My informant then described the scene as follows: "The first person who found the body caned it very hard and, after having cut the rope, started mourning. The place was soon filled with people and some were asked
[783] to bring hoes, axes, and *pangas* to destroy the tree. There and then people of the village and her lineage started their work and within a day the tree was completely destroyed and all the roots dug up from the ground and burned."

"When I asked why the tree was being destroyed," the informant went on, "the elders told me that it was being done to stop more people from hanging from it, for we Luo believe that hanging is inherited by different people in different clans. If
[824] a clan had not had a person hang himself before, it is difficult for one in that clan to hang himself or herself. If a tree on which someone had hanged himself was allowed to remain, it would drag other people to it for the same purpose."

The next case involves a curse as well as domestic trouble.

Suicide Case No. 17.

159 The husband of this suicide had been having considerable
762 trouble with his cattle and many were dying from disease. The
578 beginning of the illness coincided with the elopement of her daughter with a young man who had neither paid bride-wealth nor seemed likely to pay it. Her husband blamed his misfortunes on this incident and his suspicions were confirmed by

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

the local prophet (*jabilo*). When he returned to the village from his visit to the *jabilo*, he cursed his wife as follows: "I wish the disease which killed my heifers would kill you, my wife, for your daughter is a whore who has brought the disease of her womb to my cattle." From the evidence, the woman seemed to have planned her death carefully. She made her daughters swear that they would not be married to anyone who would ever give her husband cattle. She distributed all of her belongings to them and placed a curse on the village to the effect that her husband should never be able to marry another wife. She then entered her house and hanged herself.

Since that time, the Luo pointed out, his daughters have all eloped with persons who have not paid bride-wealth and no other woman has ever consented to marry him or to live with him.

The next case is typical of many which involve jealousy at the taking of a second wife, especially without the first wife's permission, or as in this case, expressly against her wishes. My informant was living near the village when the suicide took place and his mother became involved in it. The story was told to me in his mother's presence and she helped with the details.

Suicide Case No. 18.

A man, Okech, who was happily married, invited his wife's sister, Apolo, to come to live at his homestead to act as a nurse-maid for their first child.[6]

[6] This is common practice among the Joluo and often the "nurse" (*japidi*) is later married by her brother-in-law, especially if the sisters co-operate and agree to be happy together. Frequently the *japidi* will form a strong attachment to her brother-in-law, and marriage becomes desirable or even necessary. If a man marries a *japidi*, she becomes known as *nyar ekendo*, the wife of the same blood, and the children of both wives share the same hut and trace descent through the elder sister. The term *ekendo* is also used to describe a girl given to replace a sister who was unable to bear her husband a son; it therefore does have a slight connotation of stigma.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

African Homicide and Suicide

Okech decided to marry the nursemaid but his wife adamantly refused to agree. Okech beat her severely and she ran home to her parents where she remained for several weeks. Her sister, Apolo, continued to live in the village and by now cohabited openly with the husband as if they were man and wife. The wife eventually returned and made an effort to accept the situation as it existed. The husband built Apolo her own house as the second wife (*nyachira*) in the customary place in the homestead, but had not paid bride-wealth. In fact, he had not completed (*riso*) bride-wealth of the first wife, which added tension to the situation.

All appeared to go well until one night Okech returned from a beer party and abused his wife. What was more serious, he went to the hut of Apolo to sleep although it was the customary period of the month when he should have gone to the house of his first wife.

Early the next morning, the wife visited the mother of my informant and insisted that she accept as a gift her cooking pot and other household utensils. Her excuse was that she had bought new ones. She returned to her house where she packed the utensils and sent Apolo to carry them to my friend's mother. Meanwhile, Okech was sleeping.

She then hanged herself from a rafter in her hut. The noise of her strangulation awakened Okech, who cut the rope and made frantic efforts to revive her with water and to cane the body in the customary Luo manner. His wailing brought his brothers and relatives from their homesteads nearby.

When Apolo returned she was confronted by the irate brothers of Okech who accused her of being a witch who had brought *chira* to the village and to the lineage. They beat both Okech and Apolo and drove them from the homestead. The hut in which the woman had hanged herself was then immediately destroyed.

Apolo was not allowed to enter the homestead of her father who, with his sons, drove her from the clan area by thrashing

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

her with canes. She never returned to the district. In time Okech was forgiven and returned to his homestead. He never remarried, but now lives with two leviratic wives.

Suicide Case No. 19.

This suicide was the junior wife of a very wealthy man. Although he was wealthy, he did not provide the modern luxuries for his wives which are now becoming customary and which carry high status among women. This woman decided that she would take matters into her own hands and killed a goat belonging to herself in order to sell the meat at the market to get money and millet, so that she could get the things that she desired. When her co-wives saw what she had done, they took part of the millet and some of the money. The woman appealed to her husband, but he sided with his other wives. That evening she went into the bush near the village and hanged herself.

Suicide Case No. 20.

This woman was the second wife (*nyachira*) of a wealthy man who preferred his first and third wives to her. This preferential treatment gave them courage to abuse her often and to show her that they were the only wives of the husband. On one occasion, when she was quarrelling with the husband, the other two wives joined in and beat her and abused her. The husband looked on in amusement. Shortly after, he took hold of her son and began to cane him, saying that he was as bad as his mother. His mother tried to interfere, but was prevented from doing so by her co-wives, who continued to beat her. As soon as it got dark that night, she disappeared. Her son had run away to her mother's home. The people from the village and her relatives searched for her for three days, and at the end of the third day, her people began to mourn as if she were dead. The head of a goat was buried in front of her house to represent her body, for they were certain that she was dead and her body devoured by wild animals.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 The elders claim that her life was a tragic one, and that her 159 sister had hanged herself a few years before and had returned for her.

The next case is the one mentioned earlier in connection with case number 13 involving the mother of a girl who had committed suicide after her mother had forced her to marry against her wishes.

Suicide Case No. 21.

This mother realized that her daughter's death was due to her action. She therefore tried to commit suicide by hanging shortly after she heard the news, but was prevented from doing so by her husband and his children. A week later, she tried to hang herself on a tree by the river but she had been followed by her co-wives, who cut her down in time. Finally, a month later she hanged herself from the roof of her hut and, although she was cut down while still alive by her watchful co-wives, she died shortly afterwards from a broken neck.

Profound grief lay behind the next case. It was related to me by an informant who was present at the time.

Suicide Case No. 22.

A man in the prime of life died suddenly. His death came as a shock to all his friends and relatives, among whom he was regarded very highly. This man had two wives and a mistress (*nyas gogo*). The latter was away at the time of his death visiting her family, and she had been cursed there by her father because she refused to return to the family into which she had been legally married. Her father refused to return the bride-wealth, or to accept bride-wealth from her lover, with whom she was living. When she returned to the village of her lover, she heard the wailing of the women and knew that her lover [764] was dead. On such occasions it is customary to run into the

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

village straight to the hut which houses the body and to fall prostrate on it, wailing and crying. However, on this occasion, the woman walked very slowly into the village as if in a daze and without crying and without wailing and without saying a word to anyone. She entered her house and locked the door. Those in the village immediately became suspicious and broke the door down but within those five minutes she was found dead from hanging. The villagers told me that she believed the curse of her father had killed the man she loved, so she went to join him.

159 762 [164]

Suicide Case No. 23.

An elderly woman, whose husband had died, depended on her children for sustenance. In her old age she contracted a disease similar to leprosy. Her son, as is customary on such occasions, destroyed her house in the compound and built one for her outside of the homestead. One morning they found that she had hanged herself because, they stated, of the pain and trouble she experienced through her illness and because she was so unhappy that she could not take her grandchildren to teach and love as was her role in life as a grandmother. Her illness barred her from all of the village activities, and she felt that she was no longer part of the family. Her ghost was not considered to be any more dangerous than that of a person who died a normal death because she was old and her suicide was from old age and weariness. She held no grudge against anyone.

762 159 888 734 [603]

[pp. 214-272 not processed]

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

764 has not yet gone to live with her husband, the corpse is carried to the village of her husband and buried there, outside the hut which was already built for her.

765 On the 3rd day after the burial of a child the grave is swept, and some of the earth is poured along the wall of the hut without any further ceremonies.

763 If a woman dies who is with child a slight incision is made below her navel, but no attemp is made to save the child.

764 P. S. On the day of the burial of either husband or wife the cattle are not milked. They are driven outside the kraal, but are not herded. When they return at night they are milked, but next morning the milk is not churned. The fresh milk is drunk by the boys of the kraal and the neighbourhood. 234

765 After the death of a man or a grown up boy no cultivation or weeding of gardens is done by the inhabitant of the kraal for the next 4 days; after the death of a woman or adult girl for the next 3 days. The same regulations holds good on the day of the funeral of a child and on the 3rd day after its burial when the grave is swept. 241

If either the father or mother of twins dies the whole neighbourhood will abstain from cultivation or weeding for either 4 or 3 days. If one would break these rules the gardens that season would yield no crops or a very poor one.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

583 chicken, some *mtama*[1] and some native beer. He goes away again, having had no
584 intercourse with his intended, and returns in a few days' time and goes through the form of carrying her off; she stops at his village for some days and the important rite of cooking the first dinner for him is gone through; this may be taken to intimate that she accepts him as her husband. She then goes home and the husband pays a portion of the dowry; he comes again and carries her away and pays another portion, and so on, till the dowry is paid off and the bargain is ratified. Should the woman prove childless, or if she dies shortly after the marriage, the dowry can be reclaimed by the husband, though it is more usual for her sister to take her place. Should she, at the time of marriage, be possessed of children, legitimate or otherwise, they become her husband's property. The dowry is also recoverable if the woman deserts him for another man.

Children are sometimes contracted for marriage at a very early age, but in such a case, the girl remains with her parents until the age of puberty. The value of the dowry has greatly decreased since the cattle plague of 1883, but is again increasing. Before that date twenty head of cattle, besides goats, grain, etc., was not uncommonly asked and obtained. To-day seven head of cattle is a handsome "dot," and the price has been known to fall as low as one bull and twenty goats, [852 though a heifer and a bull is the usual minimum. The birth of the first child is also an occasion for a feast; frequently, a child is named after the hour at which it
551 was born, *e.g.*, *onyango*, morning; *ochieng*, noon; *odiambo*, afternoon; *otieno*, night. On other occasions some deceased relative appears to the mother in her sleep shortly before birth, and his name is adopted; or, if a child be born posthumously, the father's ghost appears and dictates the name. The Jaluo are very fond of nicknames, which are often passed on to descendants, though their significance is lost; *e.g.*, *obelo*—the man who owned much *mtama*; *olieeh*—the man who killed an elephant. Other nicknames are given on account of some personal peculiarity; *e.g.*, *obonyo*—the man like a locust.

863 A funeral, however, is the greatest ceremony of all. While the sick man is dying his relatives howl in chorus round his hut, while the doctors rattle stones in gourds and puff clouds of tobacco smoke around the invalid, their object, undoubtedly, being to drive away the evil spirits. Next day there is a great dance,
764 at which all the deceased's relations and friends turn up; if the dead man is a chief the whole clan is represented. Every man is dressed in full war paint and brings his best bull along with him. For a while they stay in the village lamenting, while the mother or chief wife of the deceased adorns herself with the dead man's goat skin and his tuft of hair, as mentioned above, and then runs round and round the village rattling a gourd and singing incantations. Then the visitors come out, having refreshed the inner man with beer and tobacco, and proceed to charge up and down, hanging on to their bull's tails and pricking the unfortunate beasts to encourage them to go faster. When thoroughly exhausted they collect

[1] Millet.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

881
304 friends and receiving presents of fowls. Girls, in addition, have their bodies scarified on the sides and back. From this time on until marriage the boys live in the bachelors' hut and the girls in the unmarried women's quarters. There is no mention by any of the authorities of an age-set system.

DEATH

764 The dead are buried close to their homes, a man on his right side with the hand under the head and a woman on her left side, also with the hand under the head.(1)

765 Friends and relatives gather shortly after death and, if the deceased was a man of importance, the whole of his clan is represented. Every man brings his companion bull and rides it. All dress up as if for war and the *buru* party takes place. If the dead man was not very important the mourning is limited to shaving the head and painting the body with white clay. Offerings are put on the grave of the deceased.

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Their huts are very similar to those of the Bantu Kavirondo, but they are a trifle lower, and are generally built solely of reeds (*mabua*). The huts are dug out inside to a depth of 18 inches or 2 feet; the hut is plastered with the earth dug out from the interior. 342

There are two fire-places in each hut, and the customs previously enumerated about stopping at the first or second cooking place are the same as among the Bantu Kavirondo. 354

Young girls sleep in a hut with the other girls of the village in the care of an old woman. The boys of the village sleep in a hut by themselves. The villages are roughly circular. The huts are not arranged in any particular order, but the huts of one man are generally side by side. The huts of the young men are usually near the gates, and they are supposed to watch the gates in case of any attempt being made to steal the cattle. 513 361 883

On entering a village the hut directly opposite the gate is generally the hut of the principal wife of the headman of the village, or the headman of that part of the village. 361

Food products.—Mtama, sweet potatoes, a little *wimbi*, Indian corn, and also pumpkins, semsem, and pulse (*pojo*). Bananas are occasionally grown, but they do not flourish, as the country is a little too dry for them. A little tobacco and Indian hemp are grown. The Indian corn is not ground but generally eaten in an unripe state. 241

Ironwork.—They do not smelt iron, neither do they forge their hoes, which are all imported from Samia. They however forge spears, knives, bill hooks, axes, etc., from Samia iron. Among the Gemi tribe only people belonging to a clan called Uvino forge iron; the smiths are called Yothet-th. A rough kind of salt is made from the ashes of reeds and grass, and salt is also imported from Kisingiri. 325 439 258

Death customs.—When a person dies the body is immediately taken out of the house. Upon the death of a woman the brothers-in-law of the deceased dig the grave in the verandah of the house of the deceased; the corpse is buried on its left side with the hand under the head; the body is doubled up. A man, on the contrary, is buried on his right side with the hand under the head. In the case of a woman her relations and friends come and wail; her husband presents each clan that attends with a goat, the mourners stay three days. 764

The hut in which a person has died is used for a month; the neighbours then meet and drink *tembo*, and the house is broken down. Upon the death of a man his brother digs his grave; if the first wife he married is still alive he is buried in her house; if she is dead the man is buried in the verandah of the hut in which he died. [768]

Men only wail for one day, after that only women wail; the women wail for the whole of the first three days; after that the women of the village wail at dawn for fifteen days. 765

Signs of mourning.—Women wear a string of banana fibre round the forehead, they also wear a tail of white strings for about a month; the tail usually

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

753 The ghosts are usually those of grandparents who afflict
755 grandchildren because their father has failed to fulfil the
775 duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order
769 a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

828 **Ghostly possession.** Fits are supposed to be the manifesta-
775 tion of ghostly possession. They can often be overcome by
761 giving the person warm blood to drink drawn from the veins of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

the deceased enters with a son of the dead man and together they fill in the grave and beat the floor hard. Some of the blood of the animal that was killed is poured into the grave as it is being filled with earth; and, after the grave is filled up, four pieces of meat are taken and one piece is placed at each corner of it. A pot of newly brewed beer is placed on the grave and left to ferment until it runs over the sides when the relatives drink it. When the duty of filling in the grave is completed, all the mourners wash, shave their heads and have a meal of the meat of the animal that was killed. The widows remove their girdles and place them on the roof of the house containing the grave. A goat is killed, and an elderly woman related to the deceased man ties a portion of the entrails of the goat round the waist and neck of each widow, and also winds a portion round her own neck; and this is worn by each widow during the period of mourning. On the following morning a grandson climbs the house and breaks the end off the central pole which stands out above the thatch; he also breaks the cooking-pot in which the deceased man's food was cooked. On the second day after the funeral a goat is brought into the house and each of the mourners strikes it with his fist and kicks it; it is then taken and killed, and its flesh is cooked in part of the broken cooking-pot and eaten by the mourners. After this meal the male relatives go to war against some group of their tribe who are said to have been the cause of the man's death. After mourning four days the party shave their heads and continue to the end of the mourning period without further shaving their heads or paring their nails. The widows continue to live in the house which contains the grave. When the ox or cow for the funeral ceremonies is killed, if the deceased is a man, it is speared to the heart; but, when the deceased is a woman, it is speared in the head between the horns. When the mourning ceremonies are ended, each widow makes a girdle, with the fringe at the back, which she wears for a year while she continues to live in the house containing the grave. At the end of the year she burns the girdle, goes to the river and washes, takes her old girdle from the house-roof with her and leaves it in the river-bed. After washing

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

765 she makes a new girdle from papyrus while still at the river, and wears it as she returns to her village. She is then free to remarry.

775 Dead people are sometimes said to come to life again. This is reported to take place within a short time after death. It is said that the spirit had gone on a journey and had returned after the man was thought to be dead, but in time to stop the funeral. The supposed dead person sneezes and revives, the sneezing being thought to be the signal that the spirit has returned from his journey.

764 **Death of a wife.** Should a wife die before her husband, her body is buried in the house, and, when the husband dies, he is buried in the goat-house near. He may not be buried in the same house with his wife. The animal offered at a man's funeral is always an ox, while it is an old cow that is offered at a woman's funeral. The skin from the animal is used to wrap the body as a shroud. The meat from the animal is divided in the following manner: a shoulder is retained for the dead and is eaten by the mourners at the grave, the second shoulder is for the relatives in the village, and the remainder, with the exception of the neck, is for the guests who live at a distance: the neck is given to the medicine-man.

766 762 A suicide is buried in the open, never in a house. Should the death have taken place in a house, it is burned down, for no one will live in it.

Warfare.

721 **Mode of conducting wars.** The people are not fond of war and fortunately their wars are never very serious matters. Cattle-lifting and women-stealing are the chief causes of fighting. The battles take place after short notice, when it is found that cattle have been robbed or when the alarm is given that a woman has been captured by some other clan. When a fight is impending, the attacking party drive a few cows to some spot where the other party may see them and challenge the others to come and take them. The party challenged must either attempt to carry off the cows while the others protect them, or they must pay a fine imposed by the attacking army.

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

would have supplied sufficient food for the whole village (about 50 people) for 3 months. — When all the beer is finished the bridegroom's father asks his host whether his son may now build his wife a hut, and whether she may stay with him definitely. The worthy parent will answer: "No, not yet, because the heifer for the father of the girl *(roch wuoro)* is to be brought still."

Now the relations of the bridegroom go home taking a hindleg of the cow along, which is to be carried by the bride. But she will say: "It does not behove that I should walk along the road with my father-in-law; I will come later." Somebody of the party carries the leg, and she follows next day. Henceforward she is allowed to enter her mother-in-law's hut, where she does the cooking for her husband, and stays no longer in the simba. Unless she is with child already she goes home again after a few weeks, because her father has not quite released her yet, and she still plays about with her girl-friends.

When her husband has found the heifer still wanted by her father, he takes it to him. Again he asks leave to build a hut for his wife. If the father agrees he returns with his wife and starts building at once. The woman stays with her husband definitely, for the full dowry has been paid.

Some time later the woman's father brews beer and sends word to his son-in-law, who gathers his brothers and friends to go to this beer party *(kisech kongo)*. All of them except the husband himself go to the hut of his mother-in-law, where the beer stands ready. Not until he has given her either a goat or a sheep is he allowed to enter. This animal has to be handed over not by the husband himself, but by a relation of his. With this beer party the full marriage ceremony ends.

The woman, though she has her own hut now, goes on cooking in her mother-in-law's hut. Five months after she has conceived she has regularly to take *yeath agulu* which medicine has to be warmed up every time before taking it. This she does in her own hut. However, the evening before she boils this medicine for the first time, the children of the kraal pick some vegetables and cook them in the woman's hut. This is the first food cooked there. Both husband and wife, and also the children who cooked them partake of these vegetables.

From now onwards she cooks all the food in her own hut, but her husband is not allowed to eat any of it yet. He goes for his meals to his mother's hut. After about 4 days the woman goes home once more to fetch a goat for her husband. With the goat and also some other meat and fish she returns to her husband. When this food is cooked she calls her husband and the men of the village for a little feast. On this occasion she gives the goat to her husband, thereby sealing the contract with him *(criso chwore)*.

Burial of a married Man.

In the olden days the death of a warrior was considered to be brought about by some enemy through witchcraft. This death had to be revenged. So the very next morning, before the man got buried, people got ready for a fight, and went out to the boundary of a hostile tribe to wage a war agains them. No sooner was the warcry raised or the hostile tribe got ready too, and came to the boundary. Both parties took some of their cattle with them. After the fight the victorious party took the opponents cattle as spoils.

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

764 Since the Administration of the country by the "White Man" these wars
721 are a thing of the past. However, the old custom remains, in so far, that even at
178 present on the morning after a person's death his relations and tribesmen have a sham-fight, at the same places where formerly they used to fight their real wars.

764 The wailing at a person's death spreads the news in no time, and at day-break all the men of that tribe attire themselves in their wardress, after having smeared themselves with oker and mud, and go out with their shields and spears. They gather at the kraal of the deceased, and having brought some cattle they go out to the uninhabited boundary of their district for their sham-fight.

There the performance starts with the killing of a chicken as a sacrifice to the gods, that they might favour and bless their war, just as they did in the days of old. Whilst the old folks roast and eat the chicken the warriors dash forward to their imaginary enemy here and there stabbing a tuft of grass or throwing their spears in a bush, and rushing back again as if the enemy was on their heels.

When after an hour or two of fighting the enemy is defeated, they go back to the village of deceased. From the moment he gave up his ghost (and sometimes before that) the people of the village have been bewailling him, running in and out of the hut, shouting and yelling all the time. They have also taken his cattle one by one to the doorway of his hut, that they too might bewail their deceased master.

And now, after the warriors have returned, the corpse is put in front of the hut. The warriors and the people of the surrounding country (sometimes thousands of them, if deceased was a chief, a witchdoctor, a rainmaker, or other important personage) go up to the corpse, and bewail it, running in and out and round the kraal, all of them yelling like madmen.

The warriors also take their "spoils" up to the corpse, to show the spirit of deceased that his death has been revenged.

Whilst this is going on three men are digging the grave. If he was a rich man, i. e. if he had many wives, the grave is dug next to the hut in which he died, after a small temporary hut has been built over the spot. If he had only few wives then the grave is dug inside the hut in which he died. The corpse is lowered in the grave by 4 men, and the children of the village with their hands and feet scrape the earth into the grave, always with their backs towards the same. After the actual burial the wailing goes on for another half hour or so, whereupon all the outsiders return home.

In the evening the people of he kraal go to the grave with a chicken, which, held by the legs, is smitten with its head on the grave till it is dead. Then it is roasted and eaten. They also put a broken cooking pot on the grave, which they trample to pieces there. Then they kill a sheep, which is eaten by the men that night. Its skin is cut into narrow strips. These are tied round the right wrist of all the male inhabitants of the kraal, and round the left wrist of all the females. This finishes the ceremonies for the day.

765 Next morning arrangements are made in the open space outside the village for a dance. The older women beat a couple of drums, the young women and girls from he neighbourhood dance, the men and boys in their war-costume run about

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

food for the child, but they themselves only drink beer. On the last day all the iron, brass and other ornaments which deceased used to wear are sprinkled with some beer, made of kaffir-corn, which has previously been sacrificed. Then the ornaments are devided amongst the relations, who will wear them in future. After this all go home.

Next morning a sheep is killed and eaten. The wet skin is called the garment of deceased, and as such is worn for that day by his eldest son. At night it is slung over the gateway, where in time it rots away or some hyena finds it and makes off with it.

Every person, whether man, woman or child, is buried absolutely naked, and without any ornaments; even the little brass rings with a big blue bead each, which the old men wear all along the edge of both ears are taken out immediately after his death. To this rule there is one exception only. A *jabilo*, who is not an ordinary medicine-man, but one who has secret medicine, which he does not use for evil purposes except in warfare, is considered the greatest among men. For this reason he is specially honoured at his death. A big bull is killed and offered as a sacrifice, and the *jabilo* is buried in the fresh skin of the animal.

Burial of a Woman.

From the moment of a woman's death wailing goes on till next morning about 10 o'clock, when either her husband or her son dig the grave. All her ornaments are taken off, like at the occasion of a man's death.

Every woman is buried inside her own hut; because a woman is called the owner of the hut *(wonjot)*; hence at her death the hut has served its purpose.

When the grave is ready deceased's husband, assisted by two other people put her down in it, lying on her left side (men on their right). Her children fill up the grave scraping the earth with hands and feet, their backs towards the corpse. The wailing goes on for another half hour whilst the crowds gather.

Then all the women and girls prepare themselves for a kind of wardance to take place near the village. They take off their tassels which they throw on the roof deceased's hut. They smear themselves with mud, and dress themselves up in the war-dress of the men who came to the funeral (shields and spears left at home).

Whilst the girls and women are dancing to the beating of drums, the men and boys squat down in the village and smoke hemp. After about an hour they come back from the dance, return their apparel to the men and go home. But the men remain till the afternoon, and those living near by call again at night for a chat.

After 3 days the women of the neighbourhood gather again in order to cook and eat the dried meat, fish and other food which the deceased left in the hut at her death. After the meal they go to sweep the grave (on the 3rd day, not the 4th as after the burial of a man) gathering some earth of it in an old basket, which is put on the path outside the kraal together with her so-called pillow *(orindo)*. They also give away deceased's hoe to an old woman, and throw away its handle.

On the same day the husband of deceased and one old woman go round to the huts of the near relations, sprinkling in each hut some medicine, throwing in each hut the seedball of an Ochokplant, and gathering from its inhabitants a small

765 basketful of kaffir-corn. This corn is used to make beer from for the feast of shaving and smearing of the grave with mud, which takes place after 3 months (not 6, as in the case of husband's death). On that day also the parents of the deceased
587 woman bring another daughter, however small she may be at the time, which girl is to replace the deceased daughter, and will become the wife of the widower. They even may wait for a daughter still to be born, if deceased has no sister. But if the mother is old, and has no daughter to put in deceased's place, then the father may put a daughter by another wife in her place. This girl, though she may be a child in arms yet, is shown to the widower, who is not allowed to refuse her as his future wife, but has to wait till she is grown up. When the girl is about 10 years old a small temporary hut is built for her, in which she sleeps with her future husband for one night. Then she returns home till she is marriageable, after a heavy iron ring has been put round her left ankle, which remains as a sign, that she has taken the place of a deceased sister.

The widower, however, is at liberty to marry another girl in the meantime, but the deceased wife's sister will later be considered as his first wife (*dhako maluong*).

●764 On the morning after the death of either husband or wife 2 bulls are killed. The first is sacrificed and eaten, there and then, by anybody coming for the funeral, the other one is simply killed for the relations.

769 When about 12 months have elapsed after the death of a woman, the same customs of distributing the ornaments of deceased, and the brewing of beer for all the relations and neighbours are observed, as take place on the anniversary of the death of a married man.

Burial of a Child.

765 Small children, whether boys or girls are bewailed by the women only. The reason for this is that the people have a superstition which says that if a father bewails his child his wives will not bring forth any more.

Grown up boys and girls are bewailed by the men also, but only for a short time and not by big crowds. The mother may bewail her child for a period of about 2 months every morning for a short time. She sits down beside the grave, where
[276] she lights a little fire to protect herself agains the cold, Her wailing is interrupted now and again for the purpose of smoking a pipe.

765 After the child's death the mother may not get her head shaven until after
834 her next menstruation. Only after this her husband is allowed to sleep in her hut and observe the conjugal rights. Until he has done this the husband is not allowed to observe those rights with any of his other wives. If he would break this rule he would make the mother of the dead child barren for the rest of her life.

764 Adult boys are buried on the left hand side of the hut a few yards away, smaller boys on the same side but under the roof outside; girls in the same way, but on the right hand side.

For adult children, whether boys or girls, the usual dancing, etc. take place, the same as for married people.

If a girl dies for whom the dowry has been fully paid, but for some reason

½ [The third day after burial. – Analyst]

11:Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

764 ●

has not yet gone to live with her husband, the corpse is carried to the village of her husband and buried there, outside the hut which was already built for her.

765

On the 3rd day after the burial of a child the grave is swept, and some of the earth is poured along the wall of the hut without any further ceremonies.

763

If a woman dies who is with child a slight incision is made below her navel, but no attemp is made to save the child.

764 234

P. S. On the day of the burial of either husband or wife the cattle are not milked. They are driven outside the kraal, but are not herded. When they return at night they are milked, but next morning the milk is not churned. The fresh milk is drunk by the boys of the kraal and the neighbourhood.

765 241

After the death of a man or a grown up boy no cultivation or weeding of gardens is done by the inhabitant of the kraal for the next 4 days; after the death of a woman or adult girl for the next 3 days. The same regulations holds good on the day of the funeral of a child and on the 3rd day after its burial when the grave is swept.

If either the father or mother of twins dies the whole neighbourhood will abstain from cultivation or weeding for either 4 or 3 days. If one would break these rules the gardens that season would yield no crops or a very poor one.

231 Old cows which have stopped producing are usually killed
[837] and their meat exchanged for millet or maize which in turn
is bartered for new young heifers, bulls, goats or sheep, or if
necessary used for consumption. The same applies to oxen
764 although these are usually exchanged directly for other stock.
A heifer is usually worth two bulls or young oxen. The special
oxen used by their owners as companions when they attend
funeral mournings are seldom exchanged, but are slaughtered
when they get old, the owners preparing special feasts as a
tribute to their past service. A young man who has ridden a
special ox at funeral dances does not eat the meat when the
ox dies as a result of disease or accident. These "companions"
are usually honoured by having bells fixed on special leather
straps fastened around their necks. Some he-goats are also so
honoured. The ringing of these bells will sometimes stop
hyenas from entering the kraal and may help in tracing animals
when grazing in bushy country. The ears of the owners are
usually sensitive to the sound of the bells of their own oxen.

231 The Luo do not like polled cattle because some of them
[842] believe that such animals are unlucky. They say that if a
polled animal is paid as part of a dowry the woman is likely
to be sterile. They are very fond of oxen with long horns or
those with peculiarly or funnily placed horns. During drinking
parties the owners of such oxen "show off" by placing their
arms in different positions to demonstrate the directions of the
[554] horns of their oxen. This performance is a sign of wealth
because the average man does not possess a number of oxen
with abnormally-placed horns. Long-horned cows are not of
special value. The horns of dangerous animals are cut so as to
reduce the risk of people and young animals being horned.

Beautifying animals by branding which is practised by
some African tribes is not favoured by the Luo. The only
method that is used to increase the natural beauty of cattle,
especially bull calves, is to trim the ears. Trimming is, however,
[232] also done as a treatment for east coast fever because in this
disease the animal appears dull and heavy as if suffering from
headache, and the Luo believe that by letting a little blood
from the ear the headache is eased.

231 Luo cattle-owners do not usually go in for special colours,
822 but there are some colours which are considered objectionable.
Pure white is not liked because white animals are usually
susceptible to skin diseases, accidental skin lesions and to
marking by tick-bites which usually remain permanently
conspicuous. Another objectionable colour is striped, dark,
dull-brown. Animals with these mixed colours are not accepted
for dowry because the disagreeable colours may cause disagree-
ment during the arrangement of the marriage or between the
wife and her husband. Brown is unanimously favoured because
it is considered resistant to skin diseases and accidental injuries.

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

but until the child begins to cut its teeth. The mother does not go out to cultivate for nine days after the birth. If a woman has had two children previously who have died, she follows the same ceremony as that described among the Bantu Kavirondo. When the child has been brought back by an old woman, it is redeemed by the father, who then bores the lobe of the right ear and inserts an ear-ring of brass wire. The child is thenceforth called "Owiti," if a boy; if a girl, "Awiti," meaning "the child that has been thrown away." The old woman who picks up the child is regarded as its foster-mother. Twins are considered lucky, though their arrival is attended by a good many ceremonies and by propitiatory dances which are of an obscene nature.

Fig. A BEHIRE MAN FROM KAVIRONDO, SHOWING DEEP CUT BETWEEN EAR AND EYEBROW

When a person dies, the corpse is immediately taken out of the house. If it be a woman, her brothers-in-law dig the grave in the verandah of the house. The corpse is buried on its left side with the head under the head. In the case of a woman's death, her relatives and friends come and wail. Her husband presents each clan that attends with a goat. The mourners stay for three days. The hut in which a person has died is used for a month. The neighbours then meet together and drink beer, and the house is broken down. Upon the death of a man his brother digs his grave, and he is buried in the house of his first wife, if she is still living. If she is dead, he is buried in the verandah of his own house. Men only wail for one day. After that only the women wail, at first for three days, and then at dawn for fifteen days.

As a sign of mourning the women wear a string of banana fibre round the forehead. They also wear a black tail fringed with white strings for about a month. Others smear themselves with white earth. Relatives of

Burial Customs of the Wa-Kavirondo in the Kisumu Province. 35

By A. E. Millikin

764 When a Kavirondo dies he or she, as the case may be, is stripped of everything in the shape of clothing and ornaments and these, as a rule, are distributed amongst the children, should the dead person have any; if not, they are taken by the near relatives. As soon as the person has expired the relatives in the same "boma" commence howling and crying, and in some cases this is done before the sick person has expired, but is close to death.

The first persons informed of the death are those relatives and friends residing close at hand, who arrive quickly to join in the mourning and do their share of crying.

The relatives and friends from a distance begin to arrive decked out in all their finery, bringing food for the dead, and also some of their cattle, as a rule a few cow and bull calves. The mourning lasts for about a fortnight, but the body is kept only for about five hours after death, when it is buried underneath the floor of the hut of the dead person; but should several people have been buried there before and no space left, the body is buried just outside the hut, on the left-hand side.

As a rule after one person is buried in the hut, if it is intended to bury a second, and even a third person in the same hut, it is customary to knock out the back part of the hut and enlarge it.

775 The Kavirondo belief is that the dead can hear, and this is their reason for burying their dead in and close to their huts, as they like the dead to hear what they say.

764 The grave is dug about 4 feet deep and is circular, and the dead person is put there in a doubled-up position. The body is buried quite naked, but sometimes the skin on which the person slept, or which he wore, is placed at the bottom of the grave.

When the grave is filled up, the earth is put back in small pieces, and is pressed tightly down, so that when all the soil is put back the surface is absolutely level, and to the casual observer it would not appear that the earth had been disturbed. As a precaution against hyenas and other wild animals a species of cactus is placed for a few days over the grave.

765 Should the dead person be a grown male, the wife or mother or the nearest relative of the dead man will cry continually for three months for about an hour before day break, but will stop when day breaks.

A peculiar custom is followed by the near relatives, who, during the first few days of mourning, smear their faces with wood ashes.

761 When a grown-up person dies, male or female, neighbours will come and hold a "ngoma" (dance), dressed up in all their finery, especially the warriors, who walk into the "boma" and march round on the inside, passing the hut of the dead person and sticking their spears into the roof of the hut. They continue to march round two or three times, finally passing the dead person's hut and withdrawing their spears,

15: Millikin U-4 (no date) 1906 FL11 Luo FL11

when they pass outside; this happens before the "ngoma," and is a sort of honour to the dead. 764

The wife or wives of the deceased person go to the sons, the eldest having preference, but in no case does a son take his own mother, and any property of the deceased man is taken by the sons in the proportion of the dowry originally paid by the father for the wife which each son has claimed. 428 587

Should a wife of the dead man have a daughter, or several daughters and sons, the dowry received in the event of one of them being married will go to the girl's brother, and not to the step-father; but in the event of the girl having no brother, the step-father will claim the dowry. 428

A. S. MILLIKIN.

[p.55]

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

chicken, some *utama*[1] and some native beer. He goes away again, having had no intercourse with his intended, and returns in a few days' time and goes through the form of carrying her off; she stops at his village for some days and the important rite of cooking the first dinner for him is gone through; this may be taken to intimate that she accepts him as her husband. She then goes home and the husband pays a portion of the dowry; he comes again and carries her away and pays another portion, and so on, till the dowry is paid off and the bargain is ratified. Should the woman prove childless, or if she dies shortly after the marriage, the dowry can be reclaimed by the husband, though it is more usual for her sister to take her place. Should she, at the time of marriage, be possessed of children, legitimate or otherwise, they become her husband's property. The dowry is also recoverable if the woman deserts him for another man.

Children are sometimes contracted for marriage at a very early age, but in such a case, the girl remains with her parents until the age of puberty. The value of the dowry has greatly decreased since the cattle plague of 1883, but is again increasing. Before that date twenty head of cattle, besides goats, grain, etc., was not uncommonly asked and obtained. To-day seven head of cattle is a handsome "dot," and the price has been known to fall as low as one bull and twenty goats, though a heifer and a bull is the usual minimum. The birth of the first child is also an occasion for a feast; frequently, a child is named after the hour at which it was born, *e.g.*, *onyango*, morning; *ocking*, noon; *odiambo*, afternoon; *otieno*, night. On other occasions some deceased relative appears to the mother in her sleep shortly before birth, and his name is adopted; or, if a child be born posthumously, the father's ghost appears and dictates the name. The Jaluo are very fond of nicknames, which are often passed on to descendants, though their significance is lost; *e.g.*, *okelo*—the man who owned much *utama*; *oliech*—the man who killed an elephant. Other nicknames are given on account of some personal peculiarity; *e.g.*, *obongo*—the man like a locust.

A funeral, however, is the greatest ceremony of all. While the sick man is dying his relatives howl in chorus round his hut, while the doctors rattle stones in gourds and puff clouds of tobacco smoke around the invalid, their object, undoubtedly, being to drive away the evil spirits. Next day there is a great dance, at which all the deceased's relations and friends turn up; if the dead man is a chief the whole clan is represented. Every man is dressed in full war paint and brings his best bull along with him. For a while they stay in the village lamenting, while the mother or chief wife of the deceased adorns herself with the dead man's goat skin and his tuft of hair, as mentioned above, and then runs round and round the village rattling a gourd and singing incantations. Then the visitors come out, having refreshed the inner man with beer and tobacco, and proceed to charge up and down, hanging on to their bull's tails and pricking the unfortunate beasts to encourage them to go faster. When thoroughly exhausted they collect

[1] Millet.

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

together again, and singly or in twos and threes run out and go through a fight with some invisible foes, again presumably, the evil spirits. They are very serious all the while, and the rest watch in silence their champions as they charge, retreat and cower down behind the huge shields. Then comes more feasting, with the customary offering to the sun, and finally they disperse. 764

The wailing is kept up in the case of a chief for six days, and performed twice a day at sunrise and sunset, but after the day of the dance each village mourns by itself; for a common person three days is the limit.

The corpse is buried in a recumbent position in the deceased's hut, but the hut continues to be occupied, generally by the deceased man's heir; it is not at once destroyed or disused, as some authorities, among them Sir C. Eliot, maintain. Last of all, when the mourning is over, an offering of beer, grain, and chicken flesh, is put on the grave.

The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, "It does not matter how much you pray, you fall sick and die just the same." The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits. 776 781 782

Witchcraft, however, and demonology occupy their minds far more. The wizard is greatly dreaded, and it is easy for an unscrupulous Kavirondo to obtain his neighbour's property by accusing him of having killed one of his relations by witchcraft, knowing that he will have his neighbours' support and sympathy. The wizard is sought both for good and evil purposes; his aid is invoked alike to detect criminals and to do harm to an adversary. In a recent case brought before the writer a man was accused of having murdered one of his wives by witchcraft. According to his accusers, the supposed murderer missed his razor and accused two of his wives of the theft. They both denied all knowledge of the missing article, and he gave them till the evening of that day to find it. When their term of grace came to an end, and the razor was not produced, he was alleged to have struck one of his wives, who was on the point of bearing a child. He then produced two charms which he affixed to their respective huts, threatening that the thief would be detected by the charm and would die. Next day the woman who was said to have been struck died after producing a still-born child. The curious result was that the man was tried for murder, the accusers believing that the crime had been committed by witchcraft, and the magistrate holding that, if the man caused his wife's death at all, it was by the blow which he was alleged to have given her. The blow turned out to be a myth, and the man was discharged, much to his accusers' disgust. 754 754 674

When a Kavirondo wishes to kill his enemy secretly, the usual method is to bury a dead rat or chicken at his victim's door. If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day. 754

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

diagram, p. 17). It is therefore difficult to give a precise account of the relation between ancestor worship and lineage formation. It is noteworthy, however, that the ritual formula at a sacrifice was not spoken by any particular descendant of the recipient of sacrifice, but by any elders of his lineage present, who repeated it in turn while waiting for the sacrificial bull to urinate or excrete. If it refused to do this it was rejected and another substituted, and it was the elder who was repeating the formula at the moment when the bull urinated or excreted who had to make the sacrifice. The usual formula was *wuoru, luong' wuoru ichiemo*—'our father, call your father and eat'—followed by the bidding of a blessing on the particular matter in hand. In the funeral ritual more emphasis seems to be laid on insulating the living from the ill will of the dead than on securing the status of the latter in the other world. Similarly at any sacrifice, ancestors called to share are bidden to give the blessings for which they are asked on pain of being jeered at and despised. Children may be named, according to the father's judgement, after various circumstances or persons linked with the child's birth or ascertained in dreams. But if the child cries unusually the diviner (*ajuoga*) is called to discover which ancestor is seeking to have the child named after it. In this way the child may be named after its own father or mother, or any other relative, male or female. The same group of names tends to occur frequently in converging lines of ascent, especially those of famous ancestors, which are repeated particularly often, but there is no regular belief in the necessary reincarnation of ancestors in alternate generations.

IV. LINEAGE CONCEPTS

THE special terms which the Luo use for lineages show the distinctions which they make between different aspects of the activity of these groups. Frequently all these terms may be applied to the same group on different occasions depending on the context. The most important of these terms are *dhoot*, *gweng'*, *libamba*, and *anyuola*. *Gweng'* and *dhoot* are used of class A segments only, *anyuola* of class B segments only, and *libamba* may be used of either. The use of these terms is always logical when interpreted in relation to the structural position of the speaker, but their etymology does not always seem consistent with this unless it is understood in a symbolic sense. It may be best to give a general account of the usage and etymology of each one, followed by some quotations from informants.

Dhoot (pl. *dhoudi*) is used for all those lineages which are corporate landholding units. They are the lineages already referred to as class A. Some idea of the variations in their size and population is given in the population figures included in Figs. 1 and 2, and the maps (Figs. 3, 4, and 5). They carry general social functions. Each manages its political, jural, economic, ritual, and other affairs through a council of elders representing its major segments and recognizing one of their number as leader. Organized on a territorial basis, they are the units of primary settlement or multiples of them,[1] responsible for the acquisition, apportionment, and use of land. They are the basis of a whole series of corporate group activities ranging from

[1] By settlement I mean simply a defined area of territory, containing the dwellings and all the land resources of a specified social group. The Luo have no villages in the sense of recognized aggregations of dwellings larger than those of the family.

[text continues on p. 27]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 The elders claim that her life was a tragic one, and that her
159 sister had hanged herself a few years before and had returned for her.

The next case is the one mentioned earlier in connection with case number 13 involving the mother of a girl who had committed suicide after her mother had forced her to marry against her wishes.

Suicide Case No. 21.

This mother realized that her daughter's death was due to her action. She therefore tried to commit suicide by hanging shortly after she heard the news, but was prevented from doing so by her husband and his children. A week later, she tried to hang herself on a tree by the river but she had been followed by her co-wives, who cut her down in time. Finally, a month later she hanged herself from the roof of her hut and, although she was cut down while still alive by her watchful co-wives, she died shortly afterwards from a broken neck.

Profound grief lay behind the next case. It was related to me by an informant who was present at the time.

Suicide Case No. 22.

A man in the prime of life died suddenly. His death came as a shock to all his friends and relatives, among whom he was regarded very highly. This man had two wives and a mistress (*nyas gogo*). The latter was away at the time of his death visiting her family, and she had been cursed there by her father because she refused to return to the family into which she had been legally married. Her father refused to return the bride-wealth, or to accept bride-wealth from her lover, with whom she was living. When she returned to the village of her lover,
● [764] she heard the wailing of the women and knew that her lover was dead. On such occasions it is customary to run into the

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

village straight to the hut which houses the body and to fall prostrate on it, wailing and crying. However, on this occasion, the woman walked very slowly into the village as if in a daze and without crying and without wailing and without saying a word to anyone. She entered her house and locked the door. Those in the village immediately became suspicious and broke the door down but within those five minutes she was found dead from hanging. The villagers told me that she believed the curse of her father had killed the man she loved, so she went to join him.

159 762 [764]

Suicide Case No. 23.

An elderly woman, whose husband had died, depended on her children for sustenance. In her old age she contracted a disease similar to leprosy. Her son, as is customary on such occasions, destroyed her house in the compound and built one for her outside of the homestead. One morning they found that she had hanged herself because, they stated, of the pain and trouble she experienced through her illness and because she was so unhappy that she could not take her grandchildren to teach and love as was her role in life as a grandmother. Her illness barred her from all of the village activities, and she felt that she was no longer part of the family. Her ghost was not considered to be any more dangerous than that of a person who died a normal death because she was old and her suicide was from old age and weariness. She held no grudge against anyone.

762 159 888 734 [603]

[pp. 214-272 not processed]

881 304 friends and receiving presents of fowls. Girls, in addition, have their bodies scarified on the sides and back. From this time on until marriage the boys live in the bachelors' hut and the girls in the unmarried women's quarters. There is no mention by any of the authorities of an age-set system.

DEATH

764 The dead are buried close to their homes, a man on his right side with the hand under the head and a woman on her left side, also with the hand under the head.(1)

●765 Friends and relatives gather shortly after death and, if the deceased was a man of importance, the whole of his clan is represented. Every man brings his companion bull and rides it. All dress up as if for war and the *buru* party takes place. If the dead man was not very important the mourning is limited to shaving the head and painting the body with white clay. Offerings are put on the grave of the deceased.

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Their huts are very similar to those of the Bantu Kavirondo, but they are a trifle lower, and are generally built solely of reeds (*mabua*). The huts are dug out inside to a depth of 18 inches or 2 feet; the hut is plastered with the earth dug out from the interior. 342

There are two fire-places in each hut, and the customs previously enumerated about stopping at the first or second cooking place are the same as among the Bantu Kavirondo. 354

Young girls sleep in a hut with the other girls of the village in the care of an old woman. The boys of the village sleep in a hut by themselves. The villages are roughly circular. The huts are not arranged in any particular order, but the huts of one man are generally side by side. The huts of the young men are usually near the gates, and they are supposed to watch the gates in case of any attempt being made to steal the cattle. 513 361 883

On entering a village the hut directly opposite the gate is generally the hut of the principal wife of the headman of the village, or the headman of that part of the village. 361

Food products.—Mtama, sweet potatoes, a little *wimbi*, Indian corn, and also pumpkins, semsem, and pulse (*pojo*). Bananas are occasionally grown, but they do not flourish, as the country is a little too dry for them. A little tobacco and Indian hemp are grown. The Indian corn is not ground but generally eaten in an unripe state. 241

Ironwork.—They do not smelt iron, neither do they forge their hoes, which are all imported from Samia. They however forge spears, knives, bill hooks, axes, etc., from Samia iron. Among the Gemi tribe only people belonging to a clan called Uvino forge iron; the smiths are called Yothet-th. A rough kind of salt is made from the ashes of reeds and grass, and salt is also imported from Kisingiri. 325 439 258

Death customs.—When a person dies the body is immediately taken out of the house. Upon the death of a woman the brothers-in-law of the deceased dig the grave in the verandah of the house of the deceased; the corpse is buried on its left side with the hand under the head; the body is doubled up. A man, on the contrary, is buried on his right side with the hand under the head. In the case of a woman her relations and friends come and wail; her husband presents each clan that attends with a goat, the mourners stay three days. 764

The hut in which a person has died is used for a month; the neighbours then meet and drink *tembo*, and the house is broken down. Upon the death of a man his brother digs his grave; if the first wife he married is still alive he is buried in her house; if she is dead the man is buried in the verandah of the hut in which he died. [768]

Men only wail for one day, after that only women wail; the women wail for the whole of the first three days; after that the women of the village wail at dawn for fifteen days. 765

Signs of mourning.—Women wear a string of banana fibre round the forehead, they also wear a tail of white strings for about a month; the tail usually

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

766 worn is black. Others smear themselves with white earth. Relations in the village shave their heads three days after a death. The eldest son of the deceased sits on a stool in the road outside the village and his head is shaved by an old woman. For three days after the death of anyone of importance the villagers do not cultivate.

766 [726] If a big chief dies all the surrounding people collect at the village; even if a neighbouring clan is at war hostilities are suspended, and they attend the funeral rites of their late enemy. In the case of the death of a chief a new hut is built and the deceased is buried inside in a sitting posture; the grave is dug by a brother of the deceased. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water pot. Seeds of every kind of grain grown are put into the grave; sweet potatoes are excluded. The people dance and drink *tembo* for ten days and many oxen are slaughtered. The men wail for ten days, but the women wail every morning for about a year. No one cultivates the fields for ten days.

844 846 *Birth customs.*—On the occasion of a birth, if it is a boy it is kept inside the house for four days, if it is a girl for three days. When a birth takes place the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the hut until the child begins to cut its teeth. The mother does not go to cultivate for about nine days after the birth.

844 608 [304] [553] If a woman has had two children and they have both died, she will upon the birth of the third child take it out of the village on a basket-work tray and place it in the road; an old woman who has had a hint of this will go and pick it up and take it to her house, then the father of the child goes and buys it back for a goat: having recovered it the father bores the lobe of its right ear and inserts a small earring of brass wire. If the child is a boy it is henceforward called Owiti and if a girl it is called Awiti, meaning the child that has been thrown away. The old woman who picked up the child is afterwards called mother in addition to the real mother.

845 [553] [535] Twins are considered lucky, but the infants and their parents have to stay in seclusion in their hut for a whole month. Women neighbours may enter the hut but men may not. The twin born first is called Apio (the one who comes quickly). The twin born second is called Adongo (the one who is delayed). The birth of twins is signalised by dances which extend over a whole month; they are apparently of a somewhat obscene character.

582 583 *Marriage customs.*—Girls are espoused at the age of seven, and they often go to their husband's house at the age of ten or eleven. The suitor commences by making small payments to the father of the girl every month or two. When the man has paid say one cow and twenty sheep he takes the girl to his house.

585 The unmarried girls of the village take the bride to her husband's house. The father of the girl kills an ox and takes the meat and a quantity of *mtswa* porridge to the man's village by way of providing a wedding feast. If the man's

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kaviirondo FL4
Nandi FL13

B 824 778 The word *Muremhe* in Lu-Wanga means peace, and when peace is made between two tribes, the ceremony, if possible, always takes place at the foot of one of these trees, as the tree is a great peace charm, and the dog, which is slaughtered as part of the ceremony, is generally tied by its neck to the tree.

B 825 751 Among the Awa-wanga, if a man kills a python, it is believed that the snake will return, or possibly that its spirit will return and afflict his children with blindness. Prompt measures must, therefore, be taken to avert this disaster, and he accordingly measures the length of the reptile, and not later than the day following, hoes a path through the grass near his village equal in length to that of the snake, kills a white fowl, then sprinkles its blood in the clearing and also pours a little *ntama* or *wimbi* gruel there too; this acts as a charm to render the python's malignancy futile. Even if a python is seen only, it is considered safe to go through this ceremony. The next child that is borne to the man after killing a python is called *wanawaka* if it is a boy and *newaka* if it is a girl; (*waka* is the Lu-Wanga word for python).

B [553]

B 766 [824] A most extraordinary custom, which holds among the Awa-wanga and may be mentioned under the present heading, is that if a young girl, a virgin, dies, her female relatives, whose duty it is to bury her, artificially deflower the body before burial; this is always done by the forcible insertion of the pointed bulb of spathes which cover the immature flowers at the lower end of a growing bunch of bananas. If this is omitted, it is believed that the sisters of the deceased will not be found to be virgins on their marriage; this would be considered somewhat of a disgrace.

B [831]

B 171 It will be remembered that in Mr. Roscoe's account of the Baganda customs,[1] the flower of the plantain or banana plays a certain part in the ritual which is gone through upon the birth of twins, and is there, I believe, used as a symbol of fruitfulness or plenty; possibly a similar idea may, in the past, have had some connection with its employment in the instance now described.

L 765 766 824 There are two curious customs, in which the thorn of the acacia plays a part, which may, perhaps, be mentioned under the heading of charms. Among the Ja-Luo when a person dies, for days, perhaps months after, the whole village wails with great fervour, and at stated intervals according to the conventions laid down for the case. If, however, a barren woman dies, the people of the village at once commence to wail in the usual way, and the brothers and sisters of the deceased proceed as quickly as possible to the village where the death occurred. The first blood-relation of the deceased who arrives on the scene takes a sharp acacia thorn, sticks it into the sole of the foot of the corpse and breaks it off; immediately this is done all wailing ceases at once, nor is it renewed as in the case of an ordinary death. The origin and the object of this strange custom appears to have been entirely lost.

N 787 824 Among the Nandi, when a raiding party is being arranged, the *elmoran* (warriors) proceed to a *laibon*, or medicine man, an ox is killed and the *laibon*,

[1] *Journ. Anthrop. Inst.*, vol. xxxii, p. 25, *et seq.*

FL11 Luo FL11

When A MAN MARRIES
591 a second or third wife, he may select another place for his new wife, either in the village near his former wife, or he may elect to take her to some other village. A man who has wives dwelling in different places lives with them in turn. Married
586 women are careful in regard to their relations with men. Should a woman be lax in her behaviour or encourage men to visit her, her husband will send her back to her parents and divorce her.

842 A wife who is proved to be sterile is not divorced, but her
595 parents send her sister to become the man's wife, and he is expected to pay another sum as a marriage-fee for her; but there is no stated time when the sum shall be paid after the woman goes to live with him. The former wife continues to live with him as his wife.

291 **Distinctive dress of married women.** Each woman after marriage makes a girdle with a long fringe at the back and ties the ends together, which gives it the appearance of a tail. The girdle is worn constantly during the husband's life-time,
● [765] but, should he die, she takes it off and puts it on the house-roof over the door during the season of mourning to show that she is a widow and is mourning. After marriage a wife scarifies
304 her sides and back in addition to the scarifications she made at puberty. When a woman has a son born, she makes a
352 clay-mound in the middle of the floor in her house for the
852 food pot to rest on when the family are at meals.

Birth customs. A wife who expects her confinement calls
844 in an elderly woman to act as midwife. This woman is a person who has had experience in such matters and is herself a mother. When the child is born, the midwife cuts the umbilical cord on an axe handle if the child is a boy, and on a hoe handle if it is a girl. The placenta of a boy is buried outside on the right side of the doorway and that of a girl on the left side. During the first three days the father remains near the house
846 in which his wife and child lie, but the midwife alone enters and attends to the wants of the mother and child. On the third day the father takes a fowl and rubs it on the child's chest and turns it loose, when it becomes the property of the child. When the new moon appears, the parents bathe, and

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

the deceased enters with a son of the dead man and together they fill in the grave and beat the floor hard. Some of the blood of the animal that was killed is poured into the grave as it is being filled with earth; and, after the grave is filled up, four pieces of meat are taken and one piece is placed at each corner of it. A pot of newly brewed beer is placed on the grave and left to ferment until it runs over the sides when the relatives drink it. When the duty of filling in the grave is completed, all the mourners wash, shave their heads and have a meal of the meat of the animal that was killed. The widows remove their girdles and place them on the roof of the house containing the grave. A goat is killed, and an elderly woman related to the deceased man ties a portion of the entrails of the goat round the waist and neck of each widow, and also winds a portion round her own neck; and this is worn by each widow during the period of mourning. On the following morning a grandson climbs the house and breaks the end off the central pole which stands out above the thatch; he also breaks the cooking-pot in which the deceased man's food was cooked. On the second day after the funeral a goat is brought into the house and each of the mourners strikes it with his fist and kicks it; it is then taken and killed, and its flesh is cooked in part of the broken cooking-pot and eaten by the mourners. After this meal the male relatives go to war against some group of their tribe who are said to have been the cause of the man's death. After mourning four days the party shave their heads and continue to the end of the mourning period without further shaving their heads or paring their nails. The widows continue to live in the house which contains the grave. When the ox or cow for the funeral ceremonies is killed, if the deceased is a man, it is speared to the heart; but, when the deceased is a woman, it is speared in the head between the horns. When the mourning ceremonies are ended, each widow makes a girdle, with the fringe at the back, which she wears for a year while she continues to live in the house containing the grave. At the end of the year she burns the girdle, goes to the river and washes, takes her old girdle from the house-roof with her and leaves it in the river-bed. After washing

764

765

[302]

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

765 she makes a new girdle fr[illegible]us while still at the river, and wears it as she retu[illegible]r village. She is then free to remarry.

775 Dead people are sometimes said to come to life again. This is reported to take place within a short time after death. It is said that the spirit had gone on a journey and had returned after the man was thought to be dead, but in time to stop the funeral. The supposed dead person sneezes and revives, the sneezing being thought to be the signal that the spirit has returned from his journey.

764 **Death of a wife.** Should a wife die before her husband, her body is buried in the house, and, when the husband dies, he is buried in the goat-house near. He may not be buried in the same house with his wife. The animal offered at a man's funeral is always an ox, while it is an old cow that is offered at a woman's funeral. The skin from the animal is used to wrap the body as a shroud. The meat from the animal is divided in the following manner: a shoulder is retained for the dead and is eaten by the mourners at the grave, the second shoulder is for the relatives in the village, and the remainder, with the exception of the neck, is for the guests who live at a distance: the neck is given to the medicine-man.

766 762 A suicide is buried in the open, never in a house. Should the death have taken place in a house, it is burned down, for no one will live in it.

Warfare.

721 **Mode of conducting wars.** The people are not fond of war and fortunately their wars are never very serious matters. Cattle-lifting and women-stealing are the chief causes of fighting. The battles take place after short notice, when it is found that cattle have been robbed or when the alarm is given that a woman has been captured by some other clan. When a fight is impending, the attacking party drive a few cows to some spot where the other party may see them and challenge the others to come and take them. The party challenged must either attempt to carry off the cows while the others protect them, or they must pay a fine imposed by the attacking army.

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

764 721 178 Since the Administration of the country by the "White Man" these wars are a thing of the past. However, the old custom remains, in so far, that even at present on the morning after a person's death his relations and tribesmen have a sham-fight, at the same places where formerly they used to fight their real wars.

764 The wailing at a person's death spreads the news in no time, and at day-break all the men of that tribe attire themselves in their wardress, after having smeared themselves with oker and mud, and go out with their shields and spears. They gather at the kraal of the deceased, and having brought some cattle they go out to the uninhabited boundary of their district for their sham-fight.

There the performance starts with the killing of a chicken as a sacrifice to the gods, that they might favour and bless their war, just as they did in the days of old. Whilst the old folks roast and eat the chicken the warriors dash forward to their imaginary enemy here and there stabbing a tuft of grass or throwing their spears in a bush, and rushing back again as if the enemy was on their heels.

When after an hour or two of fighting the enemy is defeated, they go back to the village of deceased. From the moment he gave up his ghost (and sometimes before that) the people of the village have been bewailing him, running in and out of the hut, shouting and yelling all the time. They have also taken his cattle one by one to the doorway of his hut, that they too might bewail their deceased master.

And now, after the warriors have returned, the corpse is put in front of the hut. The warriors and the people of the surrounding country (sometimes thousands of them, if deceased was a chief, a witchdoctor, a rainmaker, or other important personage) go up to the corpse, and bewail it, running in and out and round the kraal, all of them yelling like madmen.

The warriors also take their "spoils" up to the corpse, to show the spirit of deceased that his death has been revenged.

Whilst this is going on three men are digging the grave. If he was a rich man, i. e. if he had many wives, the grave is dug next to the hut in which he died, after a small temporary hut has been built over the spot. If he had only few wives then the grave is dug inside the hut in which he died. The corpse is lowered in the grave by 4 men, and the children of the village with their hands and feet scrape the earth into the grave, always with their backs towards the same. After the actual burial the wailing goes on for another half hour or so, whereupon all the outsiders return home.

In the evening the people of he kraal go to the grave with a chicken, which, held by the legs, is smitten with its head on the grave till it is dead. Then it is roasted and eaten. They also put a broken cooking pot on the grave, which they trample to pieces there. Then they kill a sheep, which is eaten by the men that night. Its skin is cut into narrow strips. These are tied round the right wrist of all the male inhabitants of the kraal, and round the left wrist of all the females. This finishes the ceremonies for the day.

●765 Next morning arrangements are made in the open space outside the village for a dance. The older women beat a couple of drums, the young women and girls from he neighbourhood dance, the men and boys in their war-costume run about

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

with their buffalo-hide-shields and spears singing all the time. Meanwhile the heads of all the people of deceased's kraal except his wives are being shaven clean, whilst for this purpose they, in turn, are seated on a log of a thorn-tree, which is put across the main path leading to the village.

On the third day a billy-goat is killed and the meat is cooked and eaten by the women and girls of the kraal only, and an old woman gets the skin of the goat as a new skirt.

On the 4th day the relations go to the grave again and sweep it *(ywoyo lid)* with a special kind of grass, putting some earth of the grave in an old basket. This is put in the middle of the path leading to the village, together with the log of wood (orindo) which deceased used to rest his head on when sleeping. Nobody will afterwards touch these 2 articles; they are left there in the middle of the path. People will in future go past them, making a curve round them. — This explains why one very seldom finds a straight path leading to a kraal. — The hoe, which was used in digging the grave, is given to an old woman of an other part of the district, but the hoe handle is thrown away. Then all the relations living away from the kraal, and all the neighbours go home.

When they have gone, the stick on top of the deceased hut, and those on the huts of all his women *are* broken by the grandchild of deceased or by some other small boy. This is a sign to anybody that the occupants of those huts are mourning.

After about two months the wives of deceased go to the village of their parents where they stay for two days, and a young bull is killed for them in honour of deceased. Before the wives have been home, they are not allowed to sleep anywhere but in the deceased husband's village, except under extraordinary circumstances, e. g. if a woman is not able to cross a river on the way home; in such cases she may sleep in another village, but only in the hut of an old woman. If she would break this rule, then the woman in whose hut she slept would not bring forth any children.

Six months later beer is brewn for all the relations and neighbours, who come for the occasion. That day the grave is smeared with mud *(mwono lid)* and the women get their heads shaven for the first time since the death of their husband. Now also all the wives of deceased are disposed of; they go to either the brothers or the cousins of their former husband. The time of mourning is finished and the sticks are replaced on top of the huts by the same boy who broke them off. That night however the women sleep on the bare ground. That day the women wear new white tassels on their backs. These tassels are made as usual from the twisted marrow of papyrus stalks or of sisal-fibre[illegible] since the death of their husband they have left off their ordinary tassel, which they replaced by a coarse unwoven one, made of the fibrous bark of the wild fig-tree.

Then new huts are built for the women, if their new husbands live in another village, and when these are ready their former huts are broken down. If their new husbands live in the same kraal they keep their own huts, except if deceased was buried inside his hut. In this case a new hut is built and the old one is allowed to collapse over the grave. If deceased was buried in a little hut built over grave, then this hut is left till it tumbles down by itself. When later on somebody gets

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

food for the child, but they themselves only drink beer. On the last day all the iron, brass and other ornaments which deceased used to wear are sprinkled with some beer, made of kaffir-corn, which has previously been sacrificed. Then the ornaments are devided amongst the relations, who will wear them in future. After this all go home. 769 782 273

Next morning a sheep is killed and eaten. The wet skin is called the garment of deceased, and as such is worn for that day by his eldest son. At night it is slung over the gateway, where in time it rots away or some hyena finds it and makes off with it. 769 782

Every person, whether man, woman or child, is buried absolutely naked, and without any ornaments; even the little brass rings with a big blue bead each, which the old men wear all along the edge of both ears are taken out immediately after his death. To this rule there is one exception only. A *jubilo*, who is not an ordinary medicine-man, but one who has secret medicine, which he does not use for evil purposes except in warfare, is considered the greatest among men. For this reason he is specially honourd at his death. A big bull is killed and offered as a sacrifice, and the *jubilo* is buried in the fresh skin of the animal. 764 766

Burial of a Woman.

From the moment of a woman's death wailing goes on till next morning about 10 o'clock, when either her husband or her son dig the grave. All her ornaments are taken off, like at the occasion of a man's death. 764

Every woman is buried inside her own hut; because a woman is called the owner of the hut *(wonjot)*; hence at her death the hut has served its purpose.

When the grave is ready deceased's husband, assisted by two other people put her down in it, lying on her left side (men on their right). Her children fill up the grave scraping the earth with hands and feet, heir backs towards the corpse. The wailing goes on for another half hour whilst the crowds gather.

Then all the women and girls prepare themselves for a kind of wardance to take place near the village. They take off their tassels which they throw on the roof deceased's hut. They smear themselves with mud, and dress themselves up in the war-dress of the men who came to the funeral (shields and spears left at home). 535

Whilst the girls and women are dancing to the beating of drums, the men and boys squat down in the village and smoke hemp. After about an hour they come back from the dance, return their apparel to the men and go home. But the men remain till the afternoon, and those living near by call again at night for a chat. 516 274

After 3 days the women of the neighbourhood gather again in order to cook and eat the dried meat, fish and other food which the deceased left in the hut at her death. After the meal they go to sweep the grave (on the 3rd day, not the 4th as after the burial of a man) gathering some earth of it in an old basket, which is put on the path outside the kraal together with her smoked pillow *(orindo)*. They also give away deceased's hoe to an old woman, and throw away its handle. 765

On the same day the husband of deceased and one old woman go round to the huts of the near relations, sprinkling in each hut some medicine, throwing in each hut the sandbull of an ochsiphiant, and gathering from its inhabitants a small

●765 basketful of kaffir-corn. This corn is used to make beer from for the feast of shaving and smearing of the grave with mud, which takes place after 3 months (not 6, as in the case of husband's death). On that day also the parents of the deceased
587 woman bring another daughter, however small she may be at the time, which girl is to replace the deceased daughter, and will become the wife of the widower. They even may wait for a daughter still to be born, if deceased has no sister. But if the mother is old, and has no daughter to put in deceased's place, then the father may put a daughter by another wife in her place. This girl, though she may be a child in arms yet, is shown to the widower, who is not allowed to refuse her as his future wife, but has to wait till she is grown up. When the girl is about 10 years old a small temporary hut is built for her, in which she sleeps with her future husband for one night. Then she returns home till she is marriageable, after a heavy iron ring has been put round her left ankle, which remains as a sign, that she has taken the place of a deceased sister.

The widower, however, is at liberty to marry another girl in the meantime, but the deceased wife's sister will later be considered as his first wife (*dhako madongi*).

764 On the morning after the death of either husband or wife 2 bulls are killed. The first is sacrificed and eaten, there and then, by anybody coming for the funeral, the other one is simply killed for the relations.

769 When about 12 months have elapsed after the death of a woman, the same customs of distributing the ornaments of deceased, and the brewing of beer for all the relations and neighbours are observed, as take place on the anniversary of the death of a married man.

Burial of a Child.

765 Small children, whether boys or girls are bewailed by the women only. The reason for this is that the people have a superstition which says that if a father bewails his child his wives will not bring forth any more.

Grown up boys and girls are bewailed by the men also, but only for a short time and not by big crowds. The mother may bewail her child for a period of about 2 months every morning for a short time. She sits down beside the grave, where
[276] she lights a little fire to protect herself against the cold. Her wailing is interrupted now and again for the purpose of smoking a pipe.

765 After the child's death the mother may not get her head shaven until after
834 her next menstruation. Only after this her husband is allowed to sleep in her hut and observe the conjugal rights. Until he has done this the husband is not allowed to observe those rights with any of his other wives. If he would break this rule he would make the mother of the dead child barren for the rest of her life.

764 Adult boys are buried on the left hand side of the hut a few yards away, smaller boys on the same side but under the roof outside; girls in the same way, but on the right hand side.

For adult children, whether boys or girls, the usual dancing, etc. take place, the same as for married people.

If a girl dies for whom the dowry has been fully paid, but for some reason

½ [The third day after burial. – Analyst]

11:Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

has not yet gone to live with her husband, the corpse is carried to the village of her husband and buried there, outside the hut which was already built for her. 764

On the 3rd day after the burial of a child the grave is swept, and some of the earth is poured along the wall of the hut without any further ceremonies. 765

If a woman dies who is with child a slight incision is made below her navel, but no attempt is made to save the child. 763

P. S. On the day of the burial of either husband or wife the cattle are not milked. They are driven outside the kraal, but are not herded. When they return at night they are milked, but next morning the milk is not churned. The fresh milk is drunk by the boys of the kraal and the neighbourhood. 764 234

After the death of a man or a grown up boy no cultivation or weeding of gardens is done by the inhabitant of the kraal for the next 4 days; after the death of a woman or adult girl for the next 3 days. The same regulations holds good on the day of the funeral of a child and on the 3rd day after its burial when the grave is swept. 765 241

If either the father or mother of twins dies the whole neighbourhood will abstain from cultivation or weeding for either 4 or 3 days. If one would break these rules the gardens that season would yield no crops or a very poor one.

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

hut until the child begins to cut its teeth. The mother does not go out to cultivate for nine days after the birth. If a woman has had two children previously who have died, she follows the same ceremony as that described among the Bantu Kavirondo. When the child has been brought back by an old woman, it is redeemed by the father, who then bores the lobe of the right ear and inserts an ear-ring of brass wire. The child is thenceforth called "Owiti," if a boy; if a girl, "Awiti," meaning "the child that has been thrown away." The old woman who picks up the child is regarded as its foster-mother. Twins are considered lucky, though their arrival is attended by a good many ceremonies and by propitiatory dances which are of an obscene nature.

427. A KIKUYU MAN FROM FORAGE, SOUTH SIDE OF KAVIRONDO BAY

When a person dies, the corpse is immediately taken out of the house. If it be a woman, her brothers-in-law dig the grave in the verandah of the house. The corpse is buried on its left side with the hand under the head. In the case of a woman's death, her relatives and friends come and wail. Her husband presents each one that attends with a goat. The mourners stay for three days. The hut in which a person has died is tenanted for a month. The neighbours then meet together and drink beer, and the house is broken down. Upon the death of a man his brother digs his grave, and he is buried in the house of his first wife, if she is still living. If she is dead, he is buried in the verandah of his own house. Men only wail for one day. After that only the women wail, at first for three days, and then at dawn for fifteen days.

As a sign of mourning the women wear a string of beans tied round the forehead. They also wear a black tail fringed with white strings for about a month. Others smear themselves with white earth. Relatives of

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

765 a dead person shave their heads for three days after the death. The eldest son of the deceased sits on a stool outside the village, and has his head shaved. If any one of importance dies, the neighbours do not
766 cultivate for three days after the death. If a big chief dies, all the surrounding people collect at the village, and in such cases even hostilities between clans are suspended, and all join in the funeral rites of the late chief, even if he happens to be at war with some of his dependent clans. In the case of the death of a chief, a new hut is built. The grave of the chief is dug by his brother. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water-pot. Seeds of every kind of grain grown in the vicinity are put into the grave, but sweet potatoes are excluded. The people dance and drink "tembo" for ten days, and slaughter many oxen. The men wail for ten days, but the women wail every morning for a year. No one cultivates the fields for ten days.

428 When a man dies, his property goes to the brother, if the children are small. If the eldest son is grown up, he takes the property and gives his brothers a share, but a man is not allowed to take the amount paid by any one who marries one of his sisters. This marriage payment goes to
[597] the deceased father's brothers. The brothers of the deceased take his wives,
[622] but the eldest son probably takes the youngest wife of his deceased father. When a chief dies, the son whom he has chosen succeeds him. This successor is chosen really some years before the chief dies. The successor divides the private property of the chief with his brothers.

727 When a warrior has *killed* a man in *warfare*, he must (besides
782 shaving his head) catch a fowl and hang it round his neck head uppermost. He must not enter his home village until this has been done. Whilst the fowl is suspended to the man's neck by the beak its head is severed from the body, and the head is left hanging from the man's neck. The warrior then enters the village, and shortly afterwards prepares a big feast to propitiate the man he has killed, so that his ghost may not give
788 trouble. If a house is struck by *lightning*, and any one is killed inside, the head-man of the village must obtain a male fowl of a red colour and walk round the house holding up the fowl three times. The house is then broken up, and the wood is used for other purposes. When desiring
728 to make peace with another tribe with whom they have been at war, they kill a sheep and put part of it into a wooden mortar such as is used for crushing grain. The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been worsted, and which is suing for peace, must
[729] then go to the head village of the conqueror and proceed to sweep up the cattle kraal. This is accepted as a kind of submission.

145 Like the Bantu Kavirondo, the Ja-luo are in the main a *healthy people*.

15: Millikin U-4 (no date) 1906 FL11 Luo FL11

Burial Customs of the Wa-Kavirondo in the Kisumu Province. 35

By A. S. Millikin

764 When a Kavirondo dies he or she, as the case may be, is stripped of everything in the shape of clothing and ornaments and these, as a rule, are distributed amongst the children, should the dead person have any; if not, they are taken by the near relatives. As soon as the person has expired the relatives in the same "boma" commence howling and crying, and in some cases this is done before the sick person has expired, but is close to death.

The first persons informed of the death are those relatives and friends residing close at hand, who arrive quickly to join in the mourning and do their share of crying.

The relatives and friends from a distance begin to arrive decked out in all their finery, bringing food for the dead, and also some of their cattle, as a rule a few cow and [765] bull calves. The mourning lasts for about a fortnight, but the body is kept only for about five hours after death, when it is buried underneath the floor of the hut of the dead person; but should several people have been buried there before and no space left, the body is buried just outside the hut, on the left-hand side.

As a rule after one person is buried in the hut, if it is intended to bury a second, and even a third person in the same hut, it is customary to knock out the back part of the hut and enlarge it.

775 The Kavirondo belief is that the dead can hear, and this is their reason for burying their dead in and close to their huts, as they like the dead to hear what they say.

764 The grave is dug about 4 feet deep and is circular, and the dead person is put there in a doubled-up position. The body is buried quite naked, but sometimes the skin on which the person slept, or which he wore, is placed at the bottom of the grave.

When the grave is filled up, the earth is put back in small pieces, and is pressed tightly down, so that when all the soil is put back the surface is absolutely level, and to the casual observer it would not appear that the earth had been disturbed. As a precaution against hyenas and other wild animals a species of cactus is placed for a few days over the grave.

765 Should the dead person be a grown male, the wife or mother or the nearest relative of the dead man will cry continually for three months for about an hour before day break, but will stop when day breaks.

A peculiar custom is followed by the near relatives, who, during the first few days of mourning, smear their faces with wood ashes.

764 When a grown-up person dies, male or female, neighbours will come and hold a "ngoma" (dance), dressed up in all their finery, especially the warriors, who walk into the "boma" and march round on the inside, passing the hut of the dead person and sticking their spears into the roof of the hut. They continue to march round two or three times, finally passing the dead person's hut and withdrawing their spears,

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

619 diate kin of the slayer, and eaten by representatives of the entire clan.
It might, however, be insisted on that the slayer should marry a wife in
682 the name of the dead clansman and raise heirs to him. Strangers having close kinship links with a dominant clan, may refuse to pay compensation, and they tend to regard killing as a sin, since the acceptance of compensation for homicide emphasised a distinction they are anxious to obliterate.(1) A Luo tribe can be defined as a unit in which compensation for homicide is paid, or in which there is provision for payment and the settlement of the feud.

The Tero Buru

619 Luo tribes were formerly separated from each other by the *thim* - a
stretch of bush country left unoccupied. Between segments of the same
766 tribe there was no *thim*. The ritual demonstration of *tero buru* took place across these boundaries. It was the custom of the Luo in the past not to bury an important man, known for his wealth or for his military ability, until the whole tribe, or a large part of it, had crossed the *thim* and demonstrated in front of the homesteads of the neighbouring tribe. The demonstration took the form of insults, challenges to fight and the tempting parade of cattle. It was a matter of honour for the challenging party to stand their ground and defend their herds with their lives. Such demonstrations were also made against neighbouring Bantu who had a similar structure to that of the Luo tribes. The demonstrating party was not usually attacked unless two *buru* parties of opposing tribes met. Sometimes, however, the opportunity was taken to try and raid the cattle of the neighbouring tribe.

649 Payment of compensation and the *tero buru* are the two main indications of tribal separation. In addition there is the association of a specific lineage unit with a tribe.

CLANS AND LINEAGES

613 Each Luo tribe has a dominant clan or lineage. The clan *(dho-ot)*,
has a lineage structure and lineages are differentiated by adding to the
614 name of the clan or larger lineage as and the individual name of the smaller branch. Formerly, the clans were exogamous but today the larger clans are not always so. Within the large clans maximal lineages can intermarry when the distance between them has become great enough.

836 Where the separation between two lineages has not proceeded far enough or where two clans are closely related there is a socially recognised form of love-making called *ondo*, which takes place between the young men and girls of both groups. Marriage is not permitted until the
582 separation has proceeded further. After some generations the less ap-
583 proved type of marriage *(por)* may be permitted. This is marriage by abduction and it is eventually replaced by the ordinary form *(ariyo)* when the complete separation and distinctiveness of the units is recognised.(2)

582 A man is forbidden to marry a woman who is a *wod*, a cognatic relative.

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1949, No.VII, p.4.
(2) *Ibid.*, p.7.

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

361 619 lion, leopard, and elephant, left unoccupied between a tribe and its neighbours, a no-man's land between them. Such stretches of country were found between tribe and tribe but not between segments of a tribe, even when the segments were of different clans, e.g. between Alego and Gem but not between the JoSeje, the Jokakan, and the Jokaruoth, in Alego tribe. The *thim* was sometimes extensive, as broad as ten miles.

619 766 Tribe raided tribe across the *thim* dividing them and here took place also the ritual demonstrations of *tero buru*. When a tribal dignitary, a man of substance, or a renowned warrior, died, or a man was killed in war, he was left unburied till the whole tribe, or a large segment of it, had advanced across the *thim* and demonstrated against the homesteads of a neighbouring tribe, parading their cattle before them and calling on their men with insults and abuse to come out and fight. Cattle were taken to entice the enemy into battle by a display of booty at his door and to compell the *buru* party to hold their ground should they be attacked, it being held ignoble for a herdsman not to defend his herd to the death. In this way Uyoma used to go out against Sakwa, Seme against Asembo, Kisumu, and Gem, the Gem tribe to the south of the gulf against Kamagambo, Kabwoc, Karacuonyo, and Kanyamwa, Karacuonyo against Kocia, Gem, Myakac, the Kasii Bantu, and even the Lumbwa. Where a Luo tribe bordered a Bantu tribe they made *buru* against it in the same manner as Luo tribes made it against one another, the Bantu tribes of Kavirondo being structurally of the same order as Luo tribes. Usually the demonstrating party was not attacked. This only happened on occasions when *buru* parties of opposite tribes met, each declaring its intention to challenge the other to battle, or when the demonstration turned into a raid for cattle, or when homesteads were sacked. The custom is kept up, but to-day is no more than a mimic skirmish, the cattle being driven into the *thim* where the people smash the shrubs and grasses. They bring back with them handfuls of a creeper to represent cattle taken from an enemy and throw these on the roof of the dead man's hut.

554 621 There was nothing that can be described as political office in a Luo tribe. The *ruoth* was an influential person, but no more. He was richer than his fellows in wives and cattle and people came often to his home to eat there and to discuss affairs of the day. I was told that a poor man might ask him for the gift of a cow to help him marry and that it was considered an honour to marry into his family. Any man gaining an enhanced social position of the kind was called *ruoth*, though he was in most instances a member of the dominant clan of the tribe. Some warriors (*thoondi*, bulls) won renown for their courage and resource in war and were asked to lead raids into enemy territory. Though admired, a war leader, sometimes called *thoon jatelo*, was not necessarily a *ruoth* or rich man, for he received little, perhaps a single cow, as his portion of the spoils of war. The position was not hereditary but derived from individual prowess and initiative. The *won gweng*, 'father of the land', seems also, at any rate in some parts of Luoland, to have been a man of influence in each district. He was a senior member of a lineage of the dominant clan of the tribe and settled land disputes. The one who repre-

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

worn is black. Others smear themselves with white earth. Relations in the village shave their heads three days after a death. The eldest son of the deceased sits on a stool in the road outside the village and his head is shaved by an old woman. For three days after the death of anyone of importance the villagers do not cultivate.

If a big chief dies all the surrounding people collect at the village; even if a neighbouring clan is at war hostilities are suspended, and they attend the funeral rites of their late enemy. In the case of the death of a chief a new hut is built and the deceased is buried inside in a sitting posture; the grave is dug by a brother of the deceased. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water pot. Seeds of every kind of grain grown are put into the grave; sweet potatoes are excluded. The people dance and drink *tembo* for ten days and many oxen are slaughtered. The men wail for ten days, but the women wail every morning for about a year. No one cultivates the fields for ten days.

Birth customs.—On the occasion of a birth, if it is a boy it is kept inside the house for four days, if it is a girl for three days. When a birth takes place the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the hut until the child begins to cut its teeth. The mother does not go to cultivate for about nine days after the birth.

If a woman has had two children and they have both died, she will upon the birth of the third child take it out of the village on a basket-work tray and place it in the road; an old woman who has had a hint of this will go and pick it up and take it to her house, then the father of the child goes and buys it back for a goat; having recovered it the father bores the lobe of its right ear and inserts a small earring of brass wire. If the child is a boy it is henceforward called Owiti and if a girl it is called Awiti, meaning the child that has been thrown away. The old woman who picked up the child is afterwards called mother in addition to the real mother.

Twins are considered lucky, but the infants and their parents have to stay in seclusion in their hut for a whole month. Women neighbours may enter the hut but men may not. The twin born first is called Apio (the one who comes quickly). The twin born second is called Adongo (the one who is delayed). The birth of twins is signalised by dances which extend over a whole month; they are apparently of a somewhat obscene character.

Marriage customs.—Girls are espoused at the age of seven, and they often go to their husband's house at the age of ten or eleven. The suitor commences by making small payments to the father of the girl every month or two. When the man has paid say one cow and twenty sheep he takes the girl to his house.

The unmarried girls of the village take the bride to her husband's house. The father of the girl kills an ox and takes the meat and a quantity of *wimbe* porridge to the man's village by way of providing a wedding feast. If the man's

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

originally came from the north-west. I imagine that the original possessors of these beads had considerable settlements in the neighbourhood of the Maragolia Hills, and that beads were continually being lost in the fields, and now when a heavy thunderstorm comes it washes some of the surface soil away and exposes an odd bead now and again. The supply of the blue Nya-Luo beads is of course quite inadequate for the population, and many make up for the scarcity with the ordinary blue *kibeti* bead.[1] Occasionally these ancient beads are green and yellow, but the usual colour is blue.

The Ja-Luo have a curious habit of shaving curved patterns on their heads (Fig. 11).

FIG. 11.—VIEW OF THE TOP OF A MAN'S HEAD; SHOWING HOW THE PATTERN IS SHAVED.

The young men often wear an armlet of cylindrical wooden blocks on the upper arm; the wooden blocks are coloured red with oxide of iron. A band similarly ornamented with wooden blocks is often worn round the forehead. Some of the older men wear the curved canine tooth of a hippo on the forehead. The tooth is ground down laterally till it is only about one-eighth of an inch in thickness; others wear the tooth of a wart hog attached to a necklace.

The Ja-Luo have a curious habit of standing on the top of an ant hill or in some prominent place on one leg with the flat of the other foot resting against the knee, reminding one of the attitude adopted by a stork; they will remain in this attitude quite comfortably for a considerable time. This habit is I believe characteristic of the Dinka and others of the tribes on the Nile south of Fashoda.

Miscellaneous customs.—If a person shuts the door behind him when he leaves a house, people at once say he is a witch doctor. If a wife does this to her husband, the husband will not enter her house again until she fetches a goat from her father and kills it. Similarly if a man is the culprit he has to kill a goat to avert the ill luck. If a house is struck by lightning and anybody is killed inside, the head of the village walks three times round the house with a red rooster and the house is then broken up and the wood utilized for any purpose.

Witchcraft, etc.—It is believed that people are killed by witchcraft; the person possessing the medicine has only to show it to a person in order to kill him; to save the person bewitched it is necessary to catch the wizard and to bring him to the patient and he can remove the spell, and the wizard has to pay a fine; this class of medicine man does not hide himself. There is a deeper kind of witchcraft which is only practised at night and with great secrecy. It is called Jamkingo; among the Gemi tribe many of the clan previously referred to who forge iron possess these powers.

[1] With the kind assistance of Mr. C. H. Read, of the British Museum, I examined the collections of beads at the Museum from various parts of the world, and I found yellow and blue beads of the exact colour and shape among the Egyptian antiquities and jasper beads identical in appearance to the Nya-Luo both from ancient Egypt, and also from excavations made on the site of some buried cities in Beluchistan.

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kavirondo FL4
Nandi FL13

B 824 778

The word *Murembe* in Lu-Wanga means peace, and when peace is made between two tribes, the ceremony, if possible, always takes place at the foot of one of these trees, as the tree is a great peace charm, and the dog, which is slaughtered as part of the ceremony, is generally tied by its neck to the tree.

B 825 751

Among the Awa-wanga, if a man kills a python, it is believed that the snake will return, or possibly that its spirit will return and afflict his children with blindness. Prompt measures must, therefore, be taken to avert this disaster, and he accordingly measures the length of the reptile, and not later than the day following, hoes a path through the grass near his village equal in length to that of the snake, kills a white fowl, then sprinkles its blood in the clearing and also pours a little *mtama* or *wimbi* gruel there too; this acts as a charm to render the python's malignancy futile. Even if a python is seen only, it is considered safe to go through this ceremony. The next child that is borne to the man after killing a python is called *wanawaka* if it is a boy and *newaka* if it is a girl; (*waka* is the Lu-Wanga word for python).

B [553]

B 766 [824]

A most extraordinary custom, which holds among the Awa-wanga and may be mentioned under the present heading, is that if a young girl, a virgin, dies, her female relatives, whose duty it is to bury her, artificially deflower the body before burial; this is always done by the forcible insertion of the pointed bulb of spathes which cover the immature flowers at the lower end of a growing bunch of bananas. If this is omitted, it is believed that the sisters of the deceased will not be found to be virgins on their marriage; this would be considered somewhat of a disgrace.

B [831]

B 171

It will be remembered that in Mr. Roscoe's account of the Baganda customs,[1] the flower of the plantain or banana plays a certain part in the ritual which is gone through upon the birth of twins, and is there, I believe, used as a symbol of fruitfulness or plenty; possibly a similar idea may, in the past, have had some connection with its employment in the instance now described.

● L 765 ● 766 824

There are two curious customs, in which the thorn of the acacia plays a part, which may, perhaps, be mentioned under the heading of charms. Among the *Ja-Luo* when a person dies, for days, perhaps months after, the whole village wails with great fervour, and at stated intervals according to the conventions laid down for the case. If, however, a barren woman dies, the people of the village at once commence to wail in the usual way, and the brothers and sisters of the deceased proceed as quickly as possible to the village where the death occurred. The first blood-relation of the deceased who arrives on the scene takes a sharp acacia thorn, sticks it into the sole of the foot of the corpse and breaks it off; immediately this is done all wailing ceases at once, nor is it renewed as in the case of an ordinary death. The origin and the object of this strange custom appears to have been entirely lost.

N 787 824

Among the Nandi, when a raiding party is being arranged, the *chemeron* (warriors) proceed to a *laibon*, or medicine man, an ox is killed and the *laibon*,

[1] *Journ. Anthrop. Inst.*, vol. xxxii, p. 33, *et seq.*

FL11 Luo FL11

765 she makes a new girdle from papyrus while still at the river, and wears it as she returns to her village. She is then free to remarry.

775 Dead people are sometimes said to come to life again. This is reported to take place within a short time after death. It is said that the spirit had gone on a journey and had returned after the man was thought to be dead, but in time to stop the funeral. The supposed dead person sneezes and revives, the sneezing being thought to be the signal that the spirit has returned from his journey.

764 **Death of a wife.** Should a wife die before her husband, her body is buried in the house, and, when the husband dies, he is buried in the goat-house near. He may not be buried in the same house with his wife. The animal offered at a man's funeral is always an ox, while it is an old cow that is offered at a woman's funeral. The skin from the animal is used to wrap the body as a shroud. The meat from the animal is divided in the following manner: a shoulder is retained for the dead and is eaten by the mourners at the grave, the second shoulder is for the relatives in the village, and the remainder, with the exception of the neck, is for the guests who live at a distance: the neck is given to the medicine-man.

766 762 A suicide is buried in the open, never in a house. Should the death have taken place in a house, it is burned down, for no one will live in it.

Warfare.

721 **Mode of conducting wars.** *The people are not fond of war* and fortunately their wars are never very serious matters. Cattle-lifting and women-stealing are the chief causes of fighting. The battles take place after short notice, when it is found that cattle have been robbed or when the alarm is given that a woman has been captured by some other clan. When a fight is impending, the attacking party drive a few cows to some spot where the other party may see them and challenge the others to come and take them. The party challenged must either attempt to carry off the cows while the others protect them, or they must pay a fine imposed by the attacking army.

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

food for the child, but they themselves only drink beer. On the last day all the iron, brass and other ornaments which deceased used to wear are sprinkled with some beer, made of kaffir-corn, which has previously been sacrificed. Then the ornaments are devided amongst the relations, who will wear them in future. After this all go home.

Next morning a sheep is killed and eaten. The wet skin is called the garment of deceased, and as such is worn for that day by his eldest son. At night it is slung over the gateway, where in time it rots away or some hyena finds it and makes off with it.

Every person, whether man, woman or child, is buried absolutely naked, and without any ornaments; even the little brass rings with a big blue bead each, which the old men wear all along the edge of both ears are taken out immediately after his death. To this rule there is one exception only. A *jubilo*, who is not an ordinary medicine-man, but one who has secret medicine, which he does not use for evil purposes except in warfare, is considered the greatest among men. For this reason he is specially honoured at his death. A big bull is killed and offered as a sacrifice, and the *jubilo* is buried in the fresh skin of the animal.

Burial of a Woman.

From the moment of a woman's death wailing goes on till next morning about 10 o'clock, when either her husband or her son dig the grave. All her ornaments are taken off, like at the occasion of a man's death.

Every woman is buried inside her own hut; because a woman is called the owner of the hut *(wonjot)*, hence at her death the hut has served its purpose.

When the grave is ready deceased's husband, assisted by two other people put her down in it, lying on her left side (men on their right). Her children fill up the grave scraping the earth with hands and feet, her backs towards the corpse. The wailing goes on for another half hour whilst the crowds gather.

Then all the women and girls prepare themselves for a kind of wardance to take place near the village. They take off their tassels which they throw on the roof deceased's hut. They smear themselves with mud, and dress themselves up in the war-dress of the men who came to the funeral (shields and spears left at home).

While the girls and women are dancing to the beating of drums, the men and boys squat down in the village and smoke hemp. After about an hour they come back from the dance, return their apparel to the men and go home. But the men remain till the afternoon, and those living near by call again at night for a chat.

After 3 days the women of the neighbourhood gather again in order to cook and eat the dried meat, fish and other food which the deceased left in the hut at her death. After the meal they go to sweep the grave (on the 3rd day, not the 4th as after the burial of a man) gathering some earth of it in an old basket, which is put on the path outside the kraal together with her so-called pillow *(wimbi)*. They also give away deceased's hut to an old woman, and throw away its handle.

On the same day the husband of deceased and one old woman go round to the huts of the near relations, sprinkling in each hut some medicine, throwing in each hut the scrotum of an ichneumon, and gathering from its inhabitants a small

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

765 a dead person shave their heads for three days after the death. The eldest son of the deceased sits on a stool outside the village, and has his head shaved. If any one of importance dies, the neighbours do not 766 cultivate for three days after the death. If a big chief dies, all the surrounding people colect at the village, and in such cases even hostilities between clans are suspended, and all join in the funeral rites of the late chief, even if he happns to be at war with some of his dependent clans. In the case of the death of a chief, a new hut is built. The grave of the chief is dug by his brother. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water-pot. Seeds of every kind of grain grown in the vicinity are put into the grave, but sweet potatoes are excluded. The people dance and drink "tembo" for ten days, and slaughter many oxen. The men wail for ten days, but the women wail every morning for a year. No one cultivates the fields for ten days.

428 When a man dies, *his property* goes to the brother, if the children are small. If the eldest son is grown up, he takes the property and gives his brothers a share, but a man is not allowed to take the amount paid by any one who marries one of his sisters. This marriage payment goes to [58] the deceased father's brothers. The brothers of the deceased take his wives, but the eldest son probably takes the youngest wife of his deceased [22] father. When a chief dies, the son whom he has chosen succeeds him. This successor is chosen really some years before the chief dies. The successor divides the private property of the chief with his brothers.

727 When a warrior *has killed a man in warfare*, he must (besides 782 shaving his head) eate a fowl and hang it round his neck head uppermost. He must not enter his home village until this has been done. Whilst the fowl is suspended o the man's neck by the beak its head is severed from the body, and the head is left hanging from the man's neck. The warrior then enters the village, and shortly afterwards prepares a big feast to propitiate the man he has killed, so that his ghost may not give 788 trouble. If a house is struck by *lightning*, and any one is killed inside, the head-man of the village must obtain a male fowl of a red colour and walk round the house holding up the fowl three times. The house is then broken up, and the wood is used for other purposes. When desiring 728 *to make peace* with another tribe with whom they have been at war, they kill a sheep and put part of it into a wooden mortar such as is used for crushing grain. The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been worsted, and which is suing for peace, must [234] then go to the head village of the conqueror and proceed to sweep up the cattle kraal. This is accepted as a kind of submission.

145 Like the Bantu Kavirondo, the Ja-luo are in the main a healthy people.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Their huts are very similar to those of the Bantu Kavirondo, but they are a trifle lower, and are generally built solely of reeds (*mabwa*). The huts are dug out inside to a depth of 18 inches or 2 feet; the hut is plastered with the earth dug out from the interior. 342

There are two fire-places in each hut, and the customs previously enumerated about stopping at the first or second cooking place are the same as among the Bantu Kavirondo. 357

Young girls sleep in a hut with the other girls of the village in the care of an old woman. The boys of the village sleep in a hut by themselves. The villages are roughly circular. The huts are not arranged in any particular order, but the huts of one man are generally side by side. The huts of the young men are usually near the gates, and they are supposed to watch the gates in case of any attempt being made to steal the cattle. 513 361 383

On entering a village the hut directly opposite the gate is generally the hut of the principal wife of the headman of the village, or the headman of that part of the village. 361

Food products.—Mtama, sweet potatoes, a little wimbi, Indian corn, and also pumpkins, semsem, and pulse (*pojo*). Bananas are occasionally grown, but they do not flourish, as the country is a little too dry for them. A little tobacco and Indian hemp are grown. The Indian corn is not ground but generally eaten in an unripe state. 241

Ironwork.—They do not smelt iron, neither do they forge their hoes, which are all imported from Ikamia. They however forge spears, knives, bill hooks, axes, etc., from Ikamia iron. Among the Gomi tribe only people belonging to a clan called Uvino forge iron; the smiths are called Yethet-th. A rough kind of salt is made from the ashes of reeds and grass, and salt is also imported from Kisingiri. 325 439 258

Death customs.—When a person dies the body is immediately taken out of the house. Upon the death of a woman the brothers-in-law of the deceased dig the grave in the verandah of the house of the deceased; the corpse is buried on its left side with the hand under the head; the body is doubled up. A man, on the contrary, is buried on his right side with the hand under the head. In the case of a woman her relations and friends come and wail; her husband presents each clan that attends with a goat, the mourners stay three days. 764

The hut in which a person has died is used for a month; the neighbours then meet and drink beer, and the house is broken down. Upon the death of a man his brother digs his grave; if the first wife he married is still alive he is buried in her house; if she is dead the man is buried in the verandah of the hut in which he died. 765

Men only wail for one day, after that only women wail; the women wail for the whole of the first three days; after that the women of the village wail at dawn for fifteen days.

Signs of mourning.—Women wear a string of banana fibre round the forehead, they also wear a tail of white strings for about a month; the tail usually

4: Hobley G-5 (ca. 1900) 1902 FL11 Loo FL11

526 *Games.*—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

727 Upon return from war about two out of every three cattle go to the *chief*; the *chief* then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the *chief*. A man who distinguishes himself in war is also often given a wife without payment.

240 *Food, etc.*—They eat practically all meat except that of the hyæna. Some young men eat leopard meat to make them brave in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balearica pillericeps*) is never killed or eaten by these people.

[222, 223]

752, 757 *Medicine, etc.*—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for abscess and for purging, but not for diarrhœa. They also have medicine to avoid a threatened miscarriage. They profess to have a certain antidote for snake poison.* Venereal disease is practically unknown among the Ja-Luo.

[64]

791 *Before going to war* they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called *Odede*.

728 *Peace ceremonies.*—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representative of each side takes out a piece and gives it to the opposite side. An old man from the side that is beaten will go to the village of the *chief* of the enemy and proceed to sweep up the cattle boma; this will be accepted as a sign of submission.

270 *Killing animals for food.*—They kill cows by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

428, 748 *Succession customs, etc.*—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the wives, but the eldest son will probably take the youngest wife of his deceased father.

* After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Scully, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Physalanus Alyssinica*, is used internally, an infusion being made from the leaves. The other plant, *Leonus palmatus*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

11: Hartmann M-5 (ca. 1928) 1928 FL11 Luo FL11

with their bullsh-kick-shields and spears singing all the time. Meanwhile the 765
heads of all the people of deceased's kraal except his wives are being shaven clean, [302]
while for this purpose they, in turn, are seated on a log of a three-tree which is
put across the main path leading to the village.

On the third day a billy-goat is killed and the meat is cooked and eaten by
the women and girls of the kraal only, and an old woman gets the skin of the goat
as a new skirt.

On the 4th day the relations go to the grave again and sweep it (*yeye lot*)
with a special kind of grass, putting some earth of the grave in an old basket. This [513]
is put in the middle of the path leading to the village, together with the leg of wood
(*orindo*) which deceased used to rest his head on when sleeping. Nobody will after-
wards touch these 2 articles; they are left there in the middle of the path. People
will in future go past them, making a curve round them. — This explains why
one very seldom finds a straight path leading to a kraal. — The hoe, which was
used in digging the grave, is given to an old woman of an other part of the di-
strict, but the hoe handle is thrown away. Then all the relations living away from
the kraal, and all the neighbours go home.

When they have gone, the stick on top of the deceased hut, and then on the
huts of all his women are broken by the grandchild of deceased or by some other
small boy. This is a sign to anybody that the occupants of these huts are mourning.

After about two months the wives of deceased go to the village of their parents
where they stay for two days, and a young bull is killed for them in honour of
deceased. Before the wives have been home, they are not allowed to step any-
where but in the deceased husband's village, except under extraordinary circum-
stances, e. g. if a woman is not able to cross a river on the way home; in such [842]
cases she may sleep in another village, but only in the hut of an old woman. If
she would break this rule, then the woman in whose hut she slept would not bring
forth any children.

Yet another hoe dance is drawn for all the relations and neighbours, who
come by the occasion. That day the grave is smeared with mud (mwanu lot) and
the widow get their heads shaven for the first time since the death of their hus-
band. *Now also all the wives of deceased are dispersed of, they go to either the*
brothers or the cousins of their former husband. The time of mourning is finished
and the sticks are replaced on top of the huts by the same boy who broke down all.
That night however the women sleep on the bare ground. That day the women [291]
wear new white tassels on their backs. These tassels are made as usual from the
crested mane of guinea-cocks or of cockfeather. For since the death of their
husband they have left off their ordinary tassel, which they replaced by a more
convenient one, made of the fibrous bark of the wild figtree.

There new huts are built for the women, if their new husbands live in 768 ●
another village, and when these are ready their former huts are broken down. If 769
their new husbands live in the same kraal they keep their own huts, except if deceased 753
was buried inside his hut. In this case a new hut is built and the old one is allowed
to collapse over the grave. If deceased was buried in a little hut built over grave,
then this hut is left till it tumbles down by itself. When later on somebody goes

11: Hartmann M-5 (ca. 1920)1928 FL11 Loc FL11

769 769 753 sick in the village and he witchdoctor says that the sickness is due to neglect of deceased's grave, and that they have to sacrifice a goat or a bull to propitiate him, then they put some sticks round the grave again by way of a hut, in the doorway of which they roast a chicken, and some blood of the sacrifice is put in a potsherd and placed on the grave.

769 782 273 On the anniversary of the death or thereabouts beer is brewed again. First however deceased's son visits the witchdoctor, who tells him to sacrifice a special cock, e. g. a big black one, or one with an extra toe, or one with very short legs, ect. Until such a cock is found, as indicated by the witchdoctor, the beer will be of no use. Then the chicken is roasted and eaten, except for one leg which is put on the grave and covered with a basket. Now the *wimbi* for the beer is coarsely ground and put in pots for fermenting. After twelve days the fermented *wimbi* is roasted and the next morning dried. Unground *wimbi* is cooked in water, which is strained off again, and the grain remains for 3 days in covered pots in order to sprout, after which it is dried. When these ingredients are ready, then the next day another visit is paid to the witchdoctor, who again orders a special chicken to be sacrificed, this time e. g. a white one, which is killed and eaten in the morning. Now the [824 301] women and children of deceased only pick some seed-pods of a certain wild plant (*ochok*) which they string like beads on the stalk of creeping grass (*mutlume*). These strings they put round their necks, and also round the necks of the water-vessels with which they go to the well to fetch water for the further preparations of the beer. The water is put out in the sun, and when it has become lukewarm, it is poured on the fermented *wimbi* in big earthen pots. Next day the sprouted *wimbi* is ground and put in the kenyam too. The following morning early the relations put some of the beer, now ready, in a small vessel, which they put on the grave of deceased, with a reed in it, after which the people of the village take some of the beer and drink it. Presently they bring a cock which they suspend by its legs above in the gateway of the kraal together with some secret medicine, and it remains hanging there till sunset. From 8 o'clock in the morning onwards all the relations, friends and neighbours come to partake of the beer, which is put in an enormous earthen pot (*mbira*) in an open space outside, each visitor bringing his own reed for sucking the beer. Nobody can enter the kraal but day except by the gateway where the chicken is hanging, all the other entrances being closed up. And the chicken is hung in such a way that anyone entering has to touch it. Suppose a [754] person with an "evil eye" would enter for the purpose of bewitching somebody there, the medicine would start working on him, and he would leave the place with sore eyes, which would cause him much suffering. If this person, however, returns to the village, and owns up that he came there to bewitch somebody, he will be asked to spit on the ground, so that the person bewitched may not die, and doing so his eyes will heal again.

Beer is supplied to anybody entering the kraal for three days at a stretch. No food is cooked these days. If some food is brought from a neighbouring village they may take it but otherwise they live on beer only. All the children of round about, learn about the case of persons death and called after him are carried by their mothers on this first party. Each mother brings a cooked chicken and some

FL11 Luo FL11

der the head of manslaughter should be punished at all. They feel that a person who makes the mistake of killing in anger is or has been or will eventually be punished by the ancestors, God, the elements, by illness, bad luck, misfortune, or the like, in the inevitable nature of things.

It is believed that cold-blooded, premeditated murder brings *chiew* to the group and is therefore punished by the tribe or by the segment affected. The group or the individual who took what they regarded as this calculated risk was eventually banished from the tribe or if large and strong enough to dominate the political unit to which the deceased belonged could force his supporters, usually his segment of the clan, to break away and leave the area. Luo kinship describes all members of the clan in the same genealogical generation as brothers; fratricide, therefore, has a very wide range.

Luo clans occupy and are identified with a geographical area. The clan and the area it occupies are usually called after the eponym of the tribe. Those living within a clan or tribal area who are not members of the clan or tribe are regarded as squatters (*jodak*) with limited rights. They may be unrelated squatters, but most often are found to be affines of legitimate clan members. Murder committed by such persons invokes immediate counteraction on the part of those who belong to the land by virtue of descent, *jogwong*. Cattle could be taken by force, the culprit banished or killed, and/or a woman from that group married by a member of the dead man's minimal lineage, his *jokakwaro*, to raise seed unto the dead man's name. This woman would be regarded as the wife of the dead man, her children would placate his ghost as father (*wuoro*), the physical father would merely serve as genitor.

One major clan, *Kakia*, of a powerful tribe, the Sense of Central Nyanza, descended from a woman of this type—but then not exactly of this type: what happened was as follows. A *jodak*, living in the clan area of Sense, killed the son of an important elder of the tribe. He fled to his own tribal land to

19:Wilson E-5 (ca. 1950) 1960
FL11 Loo FL11

avoid the immediate consequences and as a result war broke out between the people of Seme and the people of his tribe, Ugenya. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It is, to my knowledge, the only clan in Luo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Jokao attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Jokao had developed several devices to deal with cases of homicide. A wife could be married in the name of a murdered youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was deflowered by a stranger (jokwaŋ)

Homicide and Suicide among the Joluo of Kenya

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children. 749 837 [809]

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *pere lolo* and *nyo buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment. 766 769 [764]

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased. 728 745 583

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into the village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances. 754 683 [763] [583]

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of 761 [769] [783]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

Finally, in desperation, his sons and a group of his *jokakwero* consulted the head diviner, *jabilo*, to choose an auspicious day for the killing of the ex-chief and to collect the animals and materials necessary for cleansing after the deed had been accomplished. 159 674 628

The ex-chief was found and stabbed to death at the place named by the *jabilo* and his body was hidden in a nearby river. It was found several days later, and a witness was found who alleged that he came upon the group on the day of the murder in the act of disposing of the body.

Those who had had actual physical contact with the blood of the murdered man were cleansed as soon as they arrived home by the leading *jabilo* of the clan. He used a grey ash from burning the sacred *bwombwe* vine. The minimal lineage, *jokakwero*, assembled at the village of the senior son, who was the head of the lineage segment, and who had struck the fatal blow. There the following cleansing ritual was performed: at about two o'clock the following afternoon, a black sheep and red chicken were slaughtered by the head of the lineage. The sheep and chicken were first prepared by the *jabilo*, who placed his medicines in the mouth of the sheep and of the chicken before the sacrifice. The *jabilo* cut strips of skin from the animal and wrapped them around the spear and knives used in the murder. The spear had to be destroyed at sundown because the victim was related to the spear clan of the tribe. The meat was divided on the lineage principle and consumed ceremonially. The meat of the chicken was eaten only by those who actually struck blows. 159 783 [824]

The purpose of these sacrifices was stated by the *jabilo* to "keep the spirit of the murdered man from doing evil to the clan." It also cleansed the bodies of those who drew blood so that they could now eat with their families and once more participate in the activities of the village and clan.

After the meat was eaten, those present hel[illegible]g to decide which old woman should act as a wife [illegible]cut of 159 768 769

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

159 the murdered man, to mourn his death, to placate his spirit,
● 768 and to retain the grey ash medicine left over from the first
769 cleansing to be used when necessary to remove the danger of his ghost returning to harm members of the clan. An old woman past child bearing, *pim*, was selected and agreed to perform these functions. She was given animals for this service and a hut was built for her outside the village, where she placated the spirit of the dead man.

159 Most Joluo will agree that when a witch is killed, the dead
682 man's relatives do not take legal action but try to cover up the
759 incident. This is not difficult in Luo society. One case did, however, occur during the period of this study which could not be hidden from the authorities.

Case No. 2.

A youth of seventeen was escorting his sister from a marriage ceremony back to their village some miles away. It was late at night or early in the morning, time could not accurately be assessed, when suddenly an apparition appeared in the path of the couple. It was a naked man—swerving, jumping, screaming, and brandishing fire which glowed red as he waved his arms. The night was very dark and to the young couple the apparition appeared as a ghost. The woman fled the way she had come but the youth in his frantic effort to escape stumbled and fell. The "ghost" was on top of him instantly, clawing at his face and throat. The youth had a sheath knife in his belt and frantically struck out blindly several times as he managed to struggle free. He fled back to the village from which he came. A party of youths and men armed themselves and set out to search for and kill the witch but were unable to find the exact spot in the darkness.

159 Next morning a body was found, naked, and with several
662 stab wounds on it. The man was identified, and the finder,

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

telling the rice-growers they must make and maintain their own bunds. Last season the output jumped to 50,000 bags.

=

We drove to Nyabondo across the Kano plains. No one loves these plains. They are not only flat, they are absolutely treeless, dry, cracked, windswept, overcrowded, dusty and mean. The soil is 'black cotton', an especially viscous clay in which any vehicle bogs down irrevocably in wet weather—very fertile potentially, but soul-destroying to work. 'The people are like their soil,' I was told. 'They break your heart and yet you go on trying, something's there.'

Everywhere are circles of a particular euphorbia, a dark-green, harsh, ugly plant that grows about eight feet tall and surrounds every group of huts. When a family head dies, his homestead is evacuated, his huts are left to rot away and only the euphorbia hedge remains, so the plains are covered with old circles as well as those in use. People have tried planting eucalyptus trees, but white ants eat them before they are man-high.

No individual cultivates his land in one piece. He digs or ploughs a patch here, a patch there, another bit over there, two more bits down the hill and a piece two miles off across the valley that belonged to his mother's uncle. This is known as fragmentation; it is almost universal among Bantu people, exists also among others such as the Luo, and is like a net spread for the feet of Progress in which he becomes enmeshed and stultified.

The first stage of land enclosure must be for every cultivator to exchange fragments with his neighbours, so that all his land is gathered together in one piece. It is the first stage and also the hardest; land is life's blood to the people; it is like exhorting men to exchange their blood, or their children. Suspicions dart out of their holes like bee-eaters. Won't so-and-so, my neighbour, get an unfair share? The bit he wants to swap for my piece is smaller. Give up my fertile patch by the river where bananas flourish for that barren stretch of hillside? Never! Somewhere there is a trick in all this. . . .

B
275
279

excitement would then ensue and stupendous efforts would be made to recover the cow, which rarely failed to be returned to the owner before nightfall in order to redeem the sacred stone.

L
761
771
782

The Ja-Luo do not erect altars to the spirits of their ancestors like the Bantu Kavirondo, but for all that they believe in the influence of the spirits of the departed. If a man is stricken by illness, he will make a feast at the door of his hut, and he will take small pieces of meat and throw one to each of the four quarters of the compass; he will then fill his mouth with native beer and squirt a mouthful out on the ground in different directions and finally in a similar way toss out spoonfuls of odonee porridge in various directions as propitiatory offerings, at the same time imploring the spirits to take the food and not to worry him.

Charms.

B
787

Charms are legion among all the Kavirondo, and like other native races (and Europeans, too, for the matter of that), they make no attempt to explain why such and such a charm should produce a certain effect.

The Awa-Teuso tie a feather from a white chicken on the end of a stick as a charm to keep off hail; the sticks, which are about four feet long, are planted at intervals in the fields of beans and sem-sem; some seem to pin their faith to a wisp of grass which is tied to the stick and placed among the growing crops in the same way. This was only noticed among the Eastern Teuso people of the Kowori clan, but is probably wide spread.

B
[804]

The Tiriki people suspend a ball of clay by a string which is fastened to a stick, and plant one of these in a field of sweet potatoes or ground nuts to prevent thieving; the ball of clay has one of the yellow fruit of the common wild *Solanum* stuck into it.

N
787
824
728

The use of this combination of the fruit of the Solanum and clay, as a charm for good, seems to be rather widespread, for at the close of the Nandi campaign of 1900 when the chiefs were making overtures for peace, they brought to the Government station a native stool on which was a conical mass of moist red clay which rather reminded one of a child's mud pie; this was studded all over with the yellow Solanum fruit, and was said to be great peace medicine.

B
751

In some parts of Bantu Kavirondo, an old earthenware cooking pot will often be seen fixed on the point of one of the native conical huts. This is a charm to prevent the children becoming cross eyed, for it is said children, when quite babies, are often stricken with a disease of the eyes which leaves a chronic squint; the charm does not render them immune to the disease, but averts the after effects; this belief occurs among many tribes in Eastern Africa, and the same charm is used.

B
824
778

Among charms we may perhaps mention that curious tree the *Blondia* or, as it is called in Kavirondo, the *Kerondo* tree (*Euphorbia tuberosa*) which is remarkable both for its brilliant red flowers, and from the fact that it loses its leaves and flowers at different seasons

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

753 755 775 The ghosts are usually those of grandparents who afflict grandchildren because their father has failed to fulfil the duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

[769]

828 775 761 **Ghostly possession.** Fits are supposed to be the manifestation of ghostly possession. They can often be overcome by giving the person warm blood to drink drawn from the veins of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

11:Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

with their buffalo-hide-shields and spears singing all the time. Meanwhile the heads of all the people of deceased's kraal except his wives are being shaven clean, whilst for this purpose they, in turn, are seated on a log of a thorn-tree, which is put across the main path leading to the village. 765 [302]

On the third day a billy-goat is killed and the meat is cooked and eaten by the women and girls of the kraal only, and an old woman gets the skin of the goat as a new skirt.

On the 4th day the relations go to the grave again and sweep it (*yueyo kit*) with a special kind of grass, putting some earth of the grave in an old basket. This is put in the middle of the path leading to the village, together with the log of wood (*orimbi*) which deceased used to rest his head on when sleeping. Nobody will afterwards touch these 2 articles; they are left there in the middle of the path. People will in future go past them, making a curve round them. — This explains why one very seldom finds a straight path leading to a kraal. — The hoe, which was used in digging the grave, is given to an old woman of an other part of the district, but the hoe handle is thrown away. Then all the relations living away from the kraal, and all the neighbours go home. [513]

When they have gone, the stick on top of the deceased hut, and those on the huts of all his women are broken by the grandchild of deceased or by some other small boy. This is a sign to anybody that the occupants of those huts are mourning.

After about two months the wives of deceased go to the village of their parents where they stay for two days, and a young bull is killed for them in honour of deceased. Before the wives have been home, they are not allowed to sleep anywhere but in the deceased husband's village, except under extraordinary circumstances, e.g. if a woman is not able to cross a river on the way home; in such cases she may sleep in another village, but only in the hut of an old woman. If she would break this rule, then the woman in whose hut she slept would not bring forth any children. [842]

Six months later beer is brewn for all the relations and neighbours, who come for the occasion. That day the grave is smeared with mud (*mwomo kit*) and the women get their heads shaven for the first time since the death of their husband. Now also all the wives of deceased are disposed of; they go to either the brothers or the cousins of their former husband. The time of mourning is finished and the sticks are replaced on top of the huts by the same boy who broke them off. That night however the women sleep on the bare ground. That day the women wear new white towels on their backs. These towels are made as usual from the twisted marrow of papyrus stalks or of sisal-fibre. For since the death of their husband they have left off their ordinary towel, which they replaced by a coarse one-strand one, made of the fibrous bark of the wild fig-tree. [291]

The new huts are built for the women, if their new husbands live in another village, and when these are ready their former huts are broken down. If their new husbands live in the same kraal they keep their own huts, except if deceased was buried inside his hut. In this case a new hut is built and the old one is allowed to collapse over the grave. If deceased was buried in a little hut built over grave, that hut is left till it tumbles down by itself. When later on somebody goes 768 769 753

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

sick in the village and he witchdoctor says that the sickness is due to neglect of deceased's grave, and that they have to sacrifice a goat or a bull to propitiate him, then they put some sticks round the grave again by way of a hut, in the doorway of which they roast a chicken, and some blood of the sacrifice is put in a potsherd and placed on the grave.

On the anniversary of the death or thereabouts beer is brewn again. First however deceased's son visits the witchdoctor, who tells him to sacrifice a special cock, e. g. a big black one, or one with an extra toe, or else with very short legs, ect. Until such a cock is found, as indicated by the witchdoctor, the beer will be of no use. Then the chicken is roasted and eaten, except for one leg which is put on the grave and covered with a basket. Now the *wimbi* for the beer is coarsely ground and put in pots for fermenting. After twelve days the fermented *wimbi* is roasted and the next morning dried. Unground *wimbi* is soaked in water, which is strained off again, and the grain remains for 3 days in covered pots in order to sprout, after which it is dried. When these ingredients are ready, then the next day another visit is paid to the witchdoctor, who again orders a special chicken to be sacrificed, this time e. g. a white one, which is killed and eaten in the morning. Now the wives and children of deceased only pick some seed-pods of a certain wild plant (*ochok*) which they string like beads on the stalk of creeping grass (*matlowe*). These strings they put round their necks, and also round the necks of the water-vessels with which they go to the well to fetch water for the further preparations of the beer. The water is put out in the sun, and when it has become lukewarm, it is poured on the fermented *wimbi* in big earthen pots. Next day the sprouted *wimbi* is ground and put in the beerpots too. The following morning early the relations put some of the beer, now ready, in a small vessel, which they put on the grave of deceased, with a reed in it, after which the people of the village take some of the beer and drink it. Presently they bring a cock which they suspend by its legs alive in the gateway of the kraal together with some secret medicine, and it remains hanging there till sunset. From 8 o'clock in the morning onwards all the relations, friends and neighbours come to partake of the beer, which is put in an enormous earthen pot (*ndere*) in an open space outside, each visitor bringing his own reed for sucking the beer. Nobody can enter the kraal that day except by the gateway where the chicken is hanging, all the other entrances being closed up. And the chicken is hung in such a way that anyone entering has to touch it. Suppose a person with an "evil eye" would enter for the purpose of bewitching somebody there, the medicine would start working on him, and he would leave the place with sore eyes, which would cause him much suffering. If this person, however, returns to the village, and owns up that he came there to bewitch somebody, he will be asked to spit on the ground, so that the person bewitched may not die, and doing so his eyes will heal again.

Beer is supplied to anybody entering the kraal for those days at a stretch. No food is cooked those days. If some food is brought from a neighbouring village they may take it but otherwise they live on beer only. All the children of round about, born about the time of persons death and called after him are carried by their mothers to this beer party. Each mother brings a cooked chicken and some

11: Hartmann M-5 (ca. 1920) 1928 FL11 Loo FL11

feed for the child, but they themselves only drink beer. On the last day all the iron, brass and other ornaments which deceased used to wear are sprinkled with some beer, made of kaffir-corn, which has previously been sacrificed. Then the ornaments are divided amongst the relations, who will wear them in future. After this all go home.

Next morning a sheep is killed and eaten. The wet skin is called the garment of deceased, and as such is worn for that day by his eldest son. At night it is slung over the gateway, where in time it rots away or some hyena finds it and makes off with it.

Every person, whether man, woman or child, is buried absolutely naked, and without any ornaments, even the little brass rings with a big blue bead each, which the old men wear all along the edge of both ears are taken out immediately after his death. To this rule there is one exception only. A jubilo, who is not an ordinary medicine-man, but one who has secret medicine, which he does not use for evil purposes except in warfare, is considered the greatest among men. For this reason he is specially honoured at his death. A big bull is killed and offered as a sacrifice, and the jubilo is buried in the fresh skin of the animal.

Burial of a Woman.

From the moment of a woman's death wailing goes on till next morning about 10 o'clock, when either her husband or her son dig the grave. All her ornaments are taken off, like at the occasion of a man's death.

Every woman is buried inside her own hut, because a woman is called the owner of the hut (*wanja*), hence at her death the hut has served its purpose.

When the grave is ready deceased's husband, assisted by two other people put her down in it, lying on her left side (seen on their right). Her children fill up the grave scraping the earth with hands and feet, they backs towards the corpse. The wailing goes on for another half hour whilst the crowds gather.

Then all the women and girls prepare themselves for a kind of war-dance to take place near the village. They take off their aprons which they throw on the roof deceased's hut. They smear themselves with mud, and dress themselves up in the war-dress of the men who came to the funeral (shields and spears left at home).

While the girls and women are dancing to the beating of drums, the men and boys squat down in the village and smoke hemp. After about an hour they come back from the dance, return their apparel to the men and go home. But the men remain till the afternoon, and those living near by call again at night for a chat.

After 3 days the women of the neighbourhood gather again in order to cook and eat the dried meat, fish and other food which the deceased left in the hut at her death. After the meal they go to sweep the grave (on the 3rd day, not the 4th as after the burial of a man) gathering some earth of it in an old basket, which is put on the path outside the kraal together with her mostly pillow (*ramba*). They also give away deceased's hut to an old woman, and throw away its handle.

On the same day the husband of deceased and one old woman go round to the huts of the near relations, sprinkling in each hut some medicine, throwing in each hut the seedball of an ishuginani, and gathering from its inhabitants a small

11: Hartmann M-5 (ca. 1928)1928 FL11 Loo FL11

765 handful of kaffir-corn. This corn is used to make beer (see for the feast of shaving and smearing of the grave with mud, which takes place after 3 months (and 6, as in the case of husband's death). On that day also the parents of the deceased
587 woman bring another daughter, however small she may be at the time, which girl is to replace the deceased daughter, and will become the wife of the widower. They even may wait for a daughter still to be born, if deceased has no sister. But if the mother is old, and has no daughter to put in deceased's place, then the father may put a daughter by another wife in her place. This girl, though she may be a child as arms yet, is shown to the widower, who is not allowed to refuse her as his future wife, but has to wait till she is grown up. When the girl is about 10 years old a small, temporary hut is built for her, in which she sleeps with her future husband for one night. Then she returns home till she is marriageable, after a heavy iron ring has been put round her left ankle, which remains as a sign, that she has taken the place of a deceased sister.

The widower, however, is at liberty to marry another girl in the meantime, but the deceased wife's sister will later be considered as his first wife (*Ukuba nsalwang'*).

764 On the morning after the death of either husband or wife 2 bulls are killed. The first is sacrificed and eaten, there and then, by anybody coming for the funeral, the other one is simply killed for the relatives.

●119 When about 12 months have elapsed after the death of a woman, the same customs of distributing the ornaments of deceased, and the brewing of beer for all the relations and neighbours are observed, as take place on the anniversary of the death of a married man.

Burial of a Child.

765 Small children, whether boys or girls are bewailed by the women only. The reason for this is that the people have a superstition which says that if a father bewails his child his wives will not bring forth any more.

Grown up boys and girls are bewailed by the men also, but only for a short time and not by big crowds. The mother may bewail her child for a period of about 2 months every morning for a short time. She sits down beside the grave, where
[270] she lights a little fire to protect herself against the cold. She wailing is interrupted now and again for the purpose of smoking a pipe.

765 After the child's death the mother may not get her head shaven until after
834 her next menstruation. Only after this her husband is allowed to sleep in her hut and observe the conjugal rights. Until he has done this the husband is not allowed to observe those rights with any of his other wives. If he would break this rule he would make the mother of the dead child barren for the rest of her life.

764 Adult boys are buried on the left hand side of the hut a few yards away, smaller boys on the same side but under the roof outside, girls in the same way, but on the right hand side.

For adult children, whether boys or girls, the usual dancing, etc. take place, the same as for married people.

If a girl dies for whom the dowry has been fully paid, but for some reason

1[The third day after burial. – Analyst]

17: Southall E-5 (1946-1947) 1952 FL11 Loo FL11

422 less an titular owners of the whole land. The scheme of division may be represented as in the diagram below. All other livestock is divided in the same way. The eldest 582 son of the first wife must marry before any other sons can do so, and if the first wife has no sons the next must wait till there is no further chance of her having 585 any. When the first wife dies, the second wife becomes chief wife of the homestead, but a first wife's full status can only be succeeded to when she is replaced by a sister 428 and a new homestead is built. The property of a barren wife is inherited by a stepson 587 who is adopted into her household to do the man's work in it.

CATTLE HERD

422 All herded together

428 Head of homestead (titular owner of all)

583 a. Cattle of the elder
Entire property of homestead head.

Used to help sons or brothers' sons to marry, or to marry new wives for homestead head.

Families ultimately inherited by the youngest son of the homestead, who also takes the father's share of cattle from any subsequent marriages of sisters.

All derived from the cattle and bull values by the father at every daughter's marriage, and from their increase.

Milk from these used by the homestead head.

a. Cattle owned property of the wives.

Ultimately inherited by youngest son of each house.

All derived from the heifer called out that received by the mother at each daughter's marriage, and from the heifer of cattle and bull settled upon a wife by her father at the end of her marriage ceremonies.

Milk from these used by the wives.

Cattle of the wives' houses
Share in milked, used in quarters, one among one wives.

b. Cattle held for sons' marriages.

Any number inherited by youngest son of each house.

All derived from the cattle received at daughters' marriages other than those specified under c and a.

Homestead head has over all dominion in the original division of ancestral cattle, and can persuade wives to give up cattle from category c to help employ to marry, and may by agreement take an extra heifer from those received at a daughter's marriage, to complete the bridewealth of one of the other wives.

592 Domination to authority in the family, and also in the lineage, depends on a com-
613 bination of three qualifications: primogeniture, personal suitability in character and
539 wealth, and appointment by one's predecessor. Primogeniture is highly regarded and preferred, but is never an absolute rule. Whenever an eldest son is unsuitable, or another agnatic relative is clearly more suitable, the latter is chosen to succeed. But a successor must be named by his predecessor, and as a result of the strong common sentiments in family and lineage segments, the predecessor's appointee seems usually to have been the one whom the elders of the group wish to elect when they meet at the funeral of the predecessor to confirm his choice.

781 Ancestor worship is falling into disrepute among the Luo of today. All those who
778 go to school become at least nominal Christians, and this affects most of the young,
782 while the old are becoming diffident in the performance of rites which no longer
[79] command universal respect. The spirit shrines which used to be placed between the first and second wives' huts are hardly seen today, nor the three stones which used to stand before the spirit shrine, with the stone of sacrifice buried beneath (see

19: Southall E-9 (1946-1947) 1952 FL11 Loo FL11

diagram, p. 17). It is therefore difficult to give a precise account of the relation between ancestor worship and lineage formation. It is noteworthy, however, that the ritual formula at a sacrifice was not spoken by any particular descendant of the recipient of sacrifice, but by any elders of his lineage present, who repeated it in turn while waiting for the sacrificial bull to urinate or excrete. If it refused to do this it was rejected and another substituted, and it was the elder who was repeating the formula at the moment when the bull urinated or excreted who had to make the sacrifice. The usual formula was *ourwa, lang' owere achiew*—'our father, call your father and me'—followed by the bidding of a blessing on the particular matter in hand. In the funeral ritual more emphasis seems to be laid on involving the living from the ill will of the dead than on securing the favour of the latter in the other world. Similarly at any sacrifice, ancestors called to share are bidden to give the blessings for which they are asked on pain of being jeered at and despised. Children may be named, according to the father's judgement, after various circumstances or persons linked with the child's birth or ascertained in dreams. But if the child cries excessively the diviner (*ajuoga*) is called to discover which ancestor is seeking to have the child named after it. In this way the child may be named after its own father or mother, or any other relative, male or female. The same group of names tends to occur frequently in converging lines of descent, especially those of famous ancestors, which are repeated particularly often, but there is no regular belief in the necessary reincarnation of ancestors in alternate generations.

IV. LINEAGE CONCEPTS

Two special terms which the Luo use for lineages show the distinctions which they make between different aspects of the activity of these groups. Frequently all three terms may be applied to the same group on different occasions depending on the context. The most important of these terms are *dhoot, gweng', kitombo*, and *siyanda*. *Gweng'* and *dhoot* are used of class A segments only, *siyanda* of class B segments only, and *kitombo* may be used of either. The use of these terms is always logical when considered in relation to the structural position of the speakers, but their etymology does not always seem consistent with this unless it is understood in a symbolic sense. It may be best to give a general account of the usage and etymology of each one, followed by some quotations from informants.

Dhoot (pl. *dhoot*) is used for all those lineages which are corporate landholding units. They are the lineages already referred to as class A. Some idea of the variations in their size and population is given in the population figures included in Figs. 1 and 2, and the maps (Figs. 3, 4, and 5). They carry general social functions. Each manages its political, land, economic, ritual, and other affairs through a council of elders representing its major segments and recognizing one of their number as leader. Organized on a territorial basis, they are the units of primary settlement or multiples of them,* responsible for the acquisition, apportionment, and use of land. They are the basis of a whole series of corporate group activities ranging from

* By settlement I mean simply a defined area of territory, containing the dwellings and all the land necessary of a specified social group. The Luo have no villages in the sense of recognized aggregations of dwellings larger than those of the family.

[text continues on p. 27]

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

may be of Bantu origin. The facility with which the Luo incorporate linguistic borrowings even in the case of fundamental concepts (e.g. *Nyasaye*, God, *sasa*, enemies, &c.) is in marked contrast to the persistence with which they have retained the other elements of their culture and imposed them on the non-Luo groups assimilated by them. The Luo sum up in the term *ikwedo* all those forces of friction and competition which weaken the solidarity of a lineage segment and lead to its further subdivision. The quarrels of uterine brothers and the jealousies of co-wives are regarded as typical of these. A *ikwedo* is, then, a rival lineage segment co-ordinate to one's own. When a man speaks of his *ikwedo* he always means a segment other than his own, but included in the same superordinate segment as is the one he has in mind as claiming his loyalty at that particular moment. It is those groups of *dhoot* which stand in the *ikwedo* relationship to one another which play together as *adhola*, wrestle together, and fight together with clubs.[1]

The lineages of class B remain passive except when called into action in connexion with certain ritual situations, and the chance of this occurring depends mainly on their genealogical position. Those which are below the level of the minimal *dhoot* and *gweng'*, down to and including the members of compound and elementary families, are consistently being involved as groups in the many rituals which accompany marriages and funerals, the founding of new homesteads, the starting of cultivation, sowing and reaping, and the organization of other periodic affairs within the minimal *gweng'*. The class B segments above this level only come into active employment according to the incidence of ancestral sacrifices. When any social group is faced with a misfortune for which no specific remedy is recognized, a diviner (*ramoji*) is consulted, and sacrifice made to the patrilineal ancestor indicated as responsible for the trouble. Which one is selected depends on the gravity of the misfortune and the level of lineage grouping affected by it. The diviner is more likely to indicate one of the eponymous ancestors of *dhoot* as they are more prominent in the minds of all. If, however, the eponymous ancestor of any other segment is indicated, it would emerge from its passivity into action. Even when it is the eponymous ancestor of a *dhoot* who receives sacrifice, some or all of its genealogical co-ordinates and subordinates may only be class B segments, and these would be called into action on such occasions since the sacrificing segment usually calls its co-ordinates to participate and is itself represented by its major segments.[2] All class B segments acting in this way, whether below or above the level of the minimal *dhoot*, are called *asumbi*. Even a segment which is itself a *dhoot* and *gweng'* may be called *asumbi* in this context. The etymology of this word[3] might well suggest a unitive principle of grouping. However, as with *dhoot*, every *asumbi* is a patrilineal descent group, and whether it takes its name from a man or a woman depends on the genealogical incidence of co-wives and uterine brothers and the circumstances which call into action the agnatic groups

[1] Cf. the Talensi concept of *nanoo* (Fortes, *Dynamics of Clanship*, pp. 21, 22, 201). Here, too, there is the idea of a reciprocal relationship between co-ordinates, but in the Talensi the chief emphasis is on the level of unity resulting from common bereavement, whereas for the Luo it is on competitive subordination within a common superordinate. Co-ordinate segments are equally *ikwedo* to one another whether their ancestors were co-wives or uterine brothers.

[2] See below, p. 62. Cf. Fortes's analysis of the same principle among the Talensi (*The Dynamics of Clanship among the Tallensi*, p. 211).

[3] *asum'* n., limit; *asumb* v., to give limit. But it is possible to apply this root to procreation by men.

17: Southall E-5 (1946-1947) 1952 FL11 Lee FL11

6. Liver and remaining ribs and offal: for all the women of the homestead. 613
7. Kidneys: for the woman's unborn still in their mother's house and their friends. 583
8. Customary portion for the eldest married daughter of the woman's mother. 606
9. Customary portions to be eaten, some raw, some cooked by Bale, by all the elders assembled for the distribution.

It is worth while to treat this one rite at length, because it is the prototype of so many others. Its especial significance is that it takes place at the lowest level of segmentary organization, that it is bound to occur in every family as often as a daughter is married off, and that it draws into a structured participation not merely lineage leaders and senior elders but every man, woman, and child in the family. When the Lee youngster of either sex begins to grasp why, on certain occasions, it receives a special supply of kidney or ribs to roast on the fire with its playmates, its education in the theory of lineage structure has begun. The same holds true for all the wives of the man who bring home their portions of meat to be cooked, and share them with favourite wives or children, or allow them the scraps. [367]

There are many other occasions on which meat has to be ritually divided. In every case a similar procedure is followed, with the same articulation of lineage structure. There are the sacrifices previously mentioned, which are made to the ancestor ini- 613 792
tiated by the diviners as the cause of some misfortune. Sacrifice is also made usually within a year or so of the death of any elder of importance, and the level of lineage 769
whose major segments are called to share in it depends upon the dead man's status. If he took part in the councils of the maximal lineage its major segments would certainly be called; if he was of less importance the major segments of a lineage at some lower level would be called. A further custom concerning a demonstration of lineage segmentation is that whereby an elder of importance chooses a bull to be eaten after his death, the segments of his lineage dividing it among themselves according to principles similar to those of rite.

Besides sacrifices, every beer party, of whatever size and on whatever occasion, is also a display of lineage structure at one level or another. These parties are exceed- 613
ingly frequent, and most frequent of all in the comparative leisure of the dry season, 574
when there is a pause between the completed harvest and the next cultivation not yet begun. At this time five weeks will pass without a beer party somewhere in the 273
vicinity, and often they follow on one another for days on end. In every one there is a core of elders who epitomize the structure of the lineage segments participating in the occasion. This is all quite apart from the small quantities of beer which old men like to drink with two or three neighbours independently of any ceremonial purpose. But all parties of any size have a ritual occasion, whether it be one of the innumerable occasions resulting from death which are among our own a period of at least one and often two years, or in connexion with marriage, or for the celebration of the periodic and seasonal offices of a class A lineage. [571]

In the larger beer parties the pitchers of beer are distributed among lineage seg- 613
ments in the same way as are the joints of meat after a sacrifice. In all of them the 574
order of drinking is entirely determined by lineage seniority, starting with the repre- 576
sentatives of the major segments of the superordinate lineage, in the order of seniority of their eponymous ancestors, and downwards through the subordinate levels of the line particularly concerned. The level of major segments involved is always an index

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *pere bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into the village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

19:Wilson E-5 (ca. 1950) 1960

Homicide and Suicide among the Jalue of Kenya

Finally, in desperation, his sons and a group of his *pakakuoro* 151
consulted the local diviner, *pakilo*, to choose an auspicious day 679
for the killing of the ex-chief and to collect the animals and 638
materials necessary for cleansing after the deed had been accomplished.

The ex-chief was found and stabbed to death at the place named by the *pakilo* and his body was hidden in a nearby river. It was found several days later, and a witness was found who alleged that he came upon the group on the day of the murder in the act of disposing of the body.

Those who had had actual physical contact with the blood 157
of the murdered man were cleansed as soon as they arrived 783
home by the leading *pakilo* of the clan. He used a grey ash 809
from burning the sacred *buombwir* vine. The minimal lineage, *pakakuoro*, assembled at the village of the senior son, who was the head of the lineage segment, and who had struck the fatal blow. There the following cleansing ritual was performed: at about two o'clock the following afternoon, a black sheep and red chicken were slaughtered by the head of the lineage. The sheep and chicken were first prepared by the *pakilo*, who placed his medicines in the mouth of the sheep and of the chicken before the sacrifice. The *pakilo* cut strips of skin from the animal and wrapped them around the spear and knives used in the murder. The spear had to be destroyed at sundown because the victim was related to the spear clan of the tribe. The meat was divided on the lineage principle and consumed communally. The meat of the chicken was eaten only by those who actually struck blows.

The purpose of these sacrifices was stated by the *pakilo* to "keep the spirit of the murdered man from doing evil to the clan." It also cleansed the bodies of those who drew blood so that they could now eat with their families and once more participate in the activities of the village and clan.

After the meat was eaten, those present held a meeting to 151
decide which old women should act as a wife to the ghost of 764

159 the murdered man, to secure his death, to placate his spirit,
713 and to retain the grey ash medicine left over from the first
• 714 cleansing to be used when necessary to remove the danger of his ghost returning to harm members of the clan. An old woman past child bearing, *pire*, was selected and agreed to perform these functions. She was given animals for this service and a hut was built for her outside the village, where she placated the spirit of the dead man.

159 Most Jokos will agree that when a witch is killed, the dead
682 man's relatives do not take legal action but try to cover up the
759 incident. This is not difficult in Luo society. One case did, however, occur during the period of this study which could not be hidden from the authorities.

Case No. 2.

A youth of seventeen was escorting his sister from a marriage ceremony back to their village some miles away. It was late at night or early in the morning, time could not accurately be assessed, when suddenly an apparition appeared in the path of the couple. It was a naked man—swerving, jumping, screaming, and brandishing fire which glowed red as he waved his arms. The night was very dark and to the young couple the apparition appeared as a ghost. The woman fled the way she had come but the youth in his frantic effort to escape stumbled and fell. The "ghost" was on top of him instantly, clawing at his face and throat. The youth had a sheath knife in his belt and frantically struck out blindly several times as he managed to struggle free. He fled back to the village from which he came. A party of youths and men armed themselves and set out to search for and kill the witch but were unable to find the exact spot in the darkness.

157 Next morning a body was found, naked, and with several
682 stab wounds on it. The man was identified, and the finder,

21:Huxley Q,T-5 (no date) 1960 FL11 Luo FL11

Behind and beyond are old beliefs that are still alive. A man can lay upon a piece of land, when he is dying, an oath that binds his heirs to hold on to it for ever, and will destroy anyone who sells it out of the family—an entail with the sanction of magic. And there old homesteads on the Kano plains sheltering behind euphorbia hedges contain the bones of the deceased owner, who is buried under the floor of his hut. So consolidation may ask the son to exchange not merely a field of maize, but the bones of his father, the terrestrial anchor of his father's spirit. No wonder it is often too much to ask, and that politicians find these deep fires easy to fan.

To reach Nyabondo we climbed a small escarpment, the beginning of the Kipsigis hills, left the car beside a track and walked to the farm of a young, pleasant-mannered school supervisor called James Onyango, one of the leaders of the enclosure movement. We sat under a tree near his new tin-roofed modern bungalow, above a shallow valley with a stream. The country here is gently rolling and thickly dotted with roofs of homesteads. Many people had gathered in a circle; the women sat together in bright cottons and gay head-scarves, plump and glossy, most of them with grave-faced, round-eyed babies sleeping in their arms or crawling about the grass beside them. This question of land touches the women at the core. James Onyango told his story in English.

"The idea of exchanging gardens came to us two years ago; we had heard of it in other places; most of us were interested, and asked the Government to advise. We held a meeting and agreed unanimously to consolidate, all of us within the Kadianga clan, *fifty-nine* families. In our clan are three sub-clans; each appointed three men to form a committee. Each of these three was a *n'gwe*—an elder whose task is to look after the land, and one of these was made the president.

"We started to exchange our gardens, and at first everything was fair. Then came elections for the Legislative Council and the District Council. The candidates thought they would gain popularity by speaking against the land schemes. They campaigned among the people, and some listened. They had clever ways. In each sub-location they had an agent who

Totems.

Some efforts have been made to elucidate some facts with regard to the presence of a belief in totemism among the people, whose customs and customs are now under investigation. Researches upon this point however are attended with great difficulty, as it is not considered a suitable subject of conversation, and one and all are very reticent upon the point. The natives of the Bantu Kavirondo, Nilotic Kavirondo and Nandi groups all have a belief in the totems or *mwiru*, but, apparently, no such thing as totem worship exists, nor do the Bantu and Nilotic Kavirondo believe in their descent from the *mwiru* or totem, but a Nandi informed me that many of his tribe did believe in their original descent from a totem.

S: Hobley G-5 (ca. 1900) 1903 FL11 Lan FL11
Bantu Kavirondo FL8
Nandi FL13

Among the Bantu people each clan appears to have its own particular totem, and this may have given rise to their custom of exogamy, but in Nandi each individual is said to have his own totem irrespective of the clan. Practically the whole of the Nilotic group appear to have the same totems, but, in some parts, there are certain variations from what may be called the standard list of forbidden foods. Thus, although the exogamy which exists among the Nilotic Kavirondo may have originally arisen from totemism, the present survival of the belief has lost its original character.

In all the groups the totems appear to be animals, no example of a vegetable totem has been discovered.

The Bantu group use the word "*Mazire*" to denote the totem and, contrary to the usual belief, the eating of a totem animal is not thought to be followed by death, but only by a severe skin eruption; and if, by any misfortune, the meat of the totem is eaten, the evil consequences referred to can be averted by making a medicine "*dawa*," extracted from certain herbs, and this ointment is mixed with the fat of a black ox and rubbed all over the body of the person.

Among the Nilotic Ja Luo the totems are called "*Kwero*," and there is a long list of "*Kwero*" animals which are forbidden as food to both men and women; there is, however, an additional list of food that women must not touch.

Upon no occasion is the rule of the *Kwero* relaxed, but, curiously, the animals on this "*index expurgatorius*" are considered malignant in their influence, and it is thought praiseworthy to kill them. Thus any "*Kwero*" animal can be hunted, with the exception of the crested crane (*Balearica pallorinus*), which is, generally speaking, strictly preserved by all the Kavirondo. The Gusii tribe, however, do not consider it wrong to kill and eat this beautiful bird. The Gusii, Lego, and Suk tribes can also eat the wild cat, called by them "*Gyeroge*." The Ja-Luo chiefs wear the teeth of the leopard and crocodile as ornaments, and the skin of the leopard and wild cat; this is not considered an infringement of the "*Kwero*" law.

Examples of the Totems of the Bantu Family.

Clan or Tribe.	Special Totems.
Kisasi clan of *Ajiji* Wanga	*Inshonga*, bushbuck.
Mawana and part of Tawe and Imbiha...	*Kuru*, waterbuck or *Bisha*.
Awa-Gunya and Awa-Mumbi	*Isiwi*, pigeon.
Awa Shakwi of *Nyala*	*Njofu*, elephant.
In Kotosh there are several, according to to the clan, but over a large portion the special totem is	*Mulenyi*, a large black and white moth which appears in large flocks about November, it eats locusts.
Tawai tribe (Ngobi section)	*Imwe*, snail bush.
Idiabo, E. Tawe, S. Kolwa	*Inchonga* or *Ngwe*.
Probably the totem most common in Kolwa is	*Mbindeli*, white ants in the flying stage (not cooked). They can be eaten raw, but not when cooked.

I omitted to mention above that the Kadimo people, who live on the Lake near the mouth of the River Nzoia, believe that they are descended from the python; these reptiles are looked upon as sacred and annual sacrifices are made upon a hill in Kadimo to the common ancestor. The Kadimo people are a Bantu tribe which has adopted the language of the Nilotic Ja-Luo, and it is thus the only Bantu tribe in the country which looks upon its totem as its ancestor.

N
771
825

Certain snakes, however, are looked upon as sacred animals among some of the Uanyamwezi clans and it is highly probable that, as among the Kadimo, this is due to the belief that the snake was their common ancestor. Many Wanyamwezi consider it a deadly sin to kill a snake, and one occasionally meets an individual belonging to one of these clans who is said to be immune from the effects of snake poison.

butter being used for cooking a special meal which is eaten by the owner of the cow and his wife; a little of the butter is set aside and they smear it on their lips, but none of it may be smeared on their bodies. After the meal has been eaten, the cow is milked regularly and the milk may now be drunk by all the family. 234

Oxen used for riding. Oxen are frequently used for riding. The young men train the animals to this and ride them constantly. They turn them as they wish by prodding the side of the animal's cheek with a stick from which it turns away. The animals are trained, however, to obey the voice rather than wait for the stick. They trot along at a fast rate and cover the ground quicker than a man can walk. 442

Sheep and goats. Sheep and goats are kept by all villagers. Goats especially are eaten by men and women without any restrictions. Fowls are also kept, though, as is usual among most African tribes, fowls have to find their own food, and their chickens are constantly preyed upon by hawks and kites, and those that grow up are of a poor and miserable kind. 231 262

Building.

Architecture and mode of building. The houses are round huts with conical thatched roofs They have an outer wall of stakes three and sometimes four feet high with mud smeared over them on the inside and a central pole passing through the roof, to which the rafters are attached. The roof is thatched with grass and the end of the central pole, which passes through the roof, is rudely carved. The houses are grouped together, leaving room enough to pass between them, and a growing fence surrounds them. Many villages have no outer fence, but are built high up the hill-sides for protection from hostile clans. 342 341

Religion.

Religious beliefs. Apart from worship of the dead and a belief in ghosts, the people have little religion. They call the supreme being Nyasi, who, they say, is to be found in large trees. In times of trouble or sickness they make offerings to him of an animal which is killed under a large tree, and the [771] 776 782

INTRODUCTION

This piece of work is the result of a survey carried out in Nyahera among Luo people living round the African Inland Mission, seven miles north-west of the township of Kisumu. This investigation has provided a basis from which generalizations could be made by comparing the conditions in this locality with those in other parts of the Luo country.

Superstitions—beliefs in magic and the work of spirits—are common among the Luo people; and it appears to me that any differences in the conditions existing in various localities can be attributed to the extent to which Christian influence and economic pressure have modified the people's beliefs and manner of life.

Local differences may also be due to customs acquired from the numerous tribes contacted by the Luo in their migration. Remnants of these customs and social practices may still be found in the assimilated tribal groups.

This investigation originated from a desire to study the social development of a Luo girl. I have therefore put forward such information as I think might interest anyone engaged in educational work among the people of this tribe. I hope too that it may interest students in attempting to solve problems which would further the advance of education and broaden the outlook of parents in relation to their children.

The material put forward leaves an enormous field for comparison, criticism, and independent investigation by serious students of Luo society. The nature of the problems dealt with may also make the information appear fragmentary; but I have attempted, within the serious limitations involved; to provide a structure on which

S: Stokley G-5 (ca. 1900) 1903 FL11 Lam FL11

I must also express my indebtedness to Mr. Mayne, Collector of Nandi, for much information regarding that tribe, which is particularly conservative on these matters.

I have no doubt that, as years go by, many of the matters dealt with herein may become much clearer, but I have thought it best to publish the material without further delay, as it may help to stimulate further research, and I also fear that as civilization develops, many of the strange customs and legends may become lost; in fact, there are already signs that the younger generation of natives are losing interest in the old order of things.

Legends of the Origin of the Ja-Luo Race.

Many savage tribes have legends or myths to account for their origin, and I believe I am correct in stating that, in Africa, it is generally among those of Bantu origin that such myths are found. However, in the whole of the country to the vicinity of the east side of the Nyanza, with which I am fairly well acquainted, with one exception, no trace of a definite legend has been discovered among the Bantu tribes (the exception being the Kavirondo belief that their common ancestor was a large python). Among the Ja-Luo, however, there is a very wide-spread belief in one Apidhlo, who was the Adam of the comparatively limited area of which these people have any cognizance.

I venture to give three versions of the same myth taken down from three chiefs living some forty miles apart. Each of these authorities also gave me a genealogical tree of considerable interest, inasmuch as they contain what may be a very probable solution of the origin of the names of the Ja-Luo tribes in Kavirondo. Of course there are discrepancies, but when one considers the way this story and the genealogical tables have been handed down verbally from generation to generation, one wonders that the three versions present so many features in common.

Version I from Ugulu chief of Uyoma.

Apidhlo was the father of all the Kavirondo people. He descended from the heavens, and the day he reached the earth, the various kinds of animals also came down from above.

Apidhlo descended on Ramogi, or Lamogi, Hill, a long way north of Uganda, and he afterwards died at the same place. He descended with one woman, whose name is forgotten, and by her he had two sons and four daughters. These sons were named Ramogi and Anyanga, and each married two of his sisters.

Ramogi migrated southward, and came and settled on a hill in Kadimo country (near the mouth of the river Nzoia); this hill is called after him to this day. His offspring founded the Ja-Luo race; most of the names of his sons being the names of the various tribes which were founded by them.

Anyanga, the other son of Apidhlo, stayed in the country of his father and became the progenitor of the Ragoshi and Banyore. On the day that Apidhlo

164

reached the earth, among the other animals that accompanied him were a bull, a cow, and a calf; he also brought onions and other food-bearing seeds and plants, and there is especially mentioned besides, a tree called "Were," and out of the wood of the Were tree he made two wooden bowls. He then milked the cow into one of the wooden bowls, and, from ignorance he caught the cow's urine into the other bowl; this done, he poured the milk into a gourd and left the bowl of cow's urine in the sun, and then rested till the evening. At sundown he churned the milk that was in the gourd, collected the butter, and put it on one side; he then brought in the bowl of urine and mixed it with the buttermilk that remained in the gourd. Then, being hungry, he took the mixture and made some gruel with mimea meal, cooked and drank it; after drinking it, he passed urine for the first time since he had reached the earth, and this is the origin of the *Jo-Loo* custom of mixing milk with the cow's urine which prevails to this day.

Ambwa.
Ambwa.
Ambwa.

5: Hobley G-5 (ca. 1900) 1903 FL11 Loo FL11

He reached the earth in the country away to the north of the lake, and died in that country; at his death, he turned into a rock. Apidhho had supernatural power and possessed the power to turn into a rock at will. When he was old, the Ja-Loo conspired to kill him, but for a long time nothing came of it, because they were afraid of him; but one day sickness overcame him; the conspirators sent a girl to see if he was really sick, as they thought it would be a good opportunity to kill him. She took a small horn, used for cupping blood, in her hand, and, while talking to him, she placed the cupping horn on his shadow; to her surprise it drew blood from the shadow. She returned and told her friends that, if they wanted to kill Apidhho, they must not touch his body, but spear his shadow; they did so, and he died and turned into a rock, which the Ja-Loo afterwards considered to possess special virtues for sharpening spears on.

Bamogi was the first member of the Ja-Loo race to come to Kavirondo, and he built in Kadimo country, near what is now the village of the chief Asum.

The Ja-Mwa (or Bantu Kavirondo) are descended from Anyango and came to Kavirondo before the Ja-Loo. They also came from the north, but belong to a different stock, the Baganda and Ba-Soga.

The Nandi came from the Ja-Lango. The Ja-Loo on the south side of Kavirondo Gulf originally lived on the north side, and crossed over by canoes.

The Kidoi and various Ja-Loo clans on the Kisoo plain are the descendants of one Kaze, who is said to have come from Masai land, and to have married the sister of Barbanyo and settled down in the Kisoo plain; they are to this day often grouped together under the name Ja-Kaze.

Gemi, Lego, Sakwa, Kadimo, Upenya, the founders of the tribes of the same name, were not sons of Bamogi, but were collaterally descended from Apidhho.

Version III.

This version was obtained from Gori Kogalo, chief of Kanyamwa (Ja-Loo) on the south side of Kavirondo Gulf.

Apidhho was the father of all mankind; and he, the sun, the wind, and the moon appeared on earth together; the father of the sun was dead. Apidhho brought with him to the earth a spear, a shield, and fire. The buffalo and the cattle came out of the sea (probably meaning the Nyanza), and were herded by mankind, but the buffalo broke away, and took to the woods, refusing to become tame as the cattle did; he also brought *mtama* grain, the *wimbi* he found growing on earth in the grass; he found tobacco and the sweet potato growing in elephant dung.

Shortly after their arrival, Apidhho ordered the moon to kill an ox, but the moon refused; he then told the sun, and then the wind, they also refused, so he killed the ox himself with a blow from his fist, and then ate the meat, offering some to the sun, moon, and wind, but they all refused to eat, and he was very angry, so they fled back to the heavens and have stayed there ever since. Apidhho told his

children that he had left a beautiful country in the heavens where the people were all bright like fire, and that when they were dead, they would all go and meet these people.

Banagi, the great grandson of Apidhlo, taught the *Ja-Luo* the custom of mixing cow's urine with the milk.

Mbonga, the eldest son of Banagi, was the first member of the *Ja-Luo* to migrate southward into Kavirondo, and his brothers followed him; upon their arrival, they found the Bantu Kavirondo in possession of the land, but gradually drove them back.

The Bantu Kavirondo are descended from one Magirongo.

The Masai are descended from a *Ja-Luo* youth who, when out one day herding cattle, absconded into the woods, driving off the cattle; a woman who was lazy, and would not cultivate, crept away and joined him, and they became the progenitors of the Masai; they live by eating herbs and drinking milk to this day.

The Nandi and Lumbwa are descended from Alango, a son of Banagi.

Bajuki, a son of Apidhlo, is the ancestor of all the other people on earth, Europeans, etc.

This account was given me by an old chief living away in the hills to the south of Kavirondo Gulf, a man who has probably not seen half a dozen Europeans in the whole of his life. He told me that, in his youth, the old chiefs had many more legends, but the young men of to-day took but little interest in such things, and they were all rapidly being forgotten. He confided to me that his neighbours imputed to him the power of being able to transform himself at will into the shape of an ox and other animals, but he gravely assured me that these slanders were quite unfounded, and were a source of great embarrassment to him.

The version of the legend, given above, differs considerably from those previously recounted, and many new names appear. Most of the new names, however, are the names of tribes living in South Kavirondo, or Ugoya as it is often called, *e.g.*, Nyankago, Kuledwoyo, Kabondo, Kabuch, Kadem, Uchiong. As these were near neighbours of his ancestors, their names would be more likely to be remembered.

There is, I think, enough internal evidence to show that this is really a very ancient genealogy, brought down from the Nile valley by the people when they migrated to the south.

An examination of the three versions of the genealogy of the *Ja-Luo* just given will lay bare many discrepancies, the presence of which, to my mind, gives an air of great genuineness to the information, and is, in a way, proof of the age of the myth.

Like the genealogy of the Uganda kings given in Mr. Roscoe's paper,[1] and, for the matter of that, like many other genealogies of world-wide fame in the ancient history of more civilised countries, we have in the *Ja-Luo* genealogy a succession of mythical personages and demigods at one end of the line, and at the other end,

[1] *Journ. Anthrop. Inst.*, vol. xxxii, p. 25, "Further Notes on the Manners and Customs of the Baganda." Plates I and II.

242 land, "Mbora." A piece of land west infested in the middle of cultivation is called "aino," and the Luo are alive to the menace [678] this neglected patch is to the crops surrounding it. A man who allows "aino" to endanger his neighbours' crops is very unpopular.

STATUS OF WOMEN:

562 The position of women amongst the Luo is one of great influence, in spite of many things which show that they are not regarded as the 673 equal of the men. While they have nothing in their creation stories which gives the male such pre-eminence as is given in the Hebrew account of creation in the second chapter of Genesis, yet even in their stories it is the male which is created first. The origin of the female is surrounded with mystery, none have any clear account of her origin. But it is significant that the name by which the first woman is known to many of the Luo is ALOO. LOO or LOWO is the stem meaning earth or soil, and there is undoubtedly some connection in their minds between the fruitful soil and woman. But though her origin is surrounded in mystery, she soon is made to carry the responsibility for the fact that the sons of men have got to work. Lest the story should be unknown to some it is worth while repeating it here. According to the creation story, the first man to be created was one called Podho. To him the Creator (called Nyasaye) gave a magic hoe, which worked by itself, requiring no arm to wield it. With the hoe Nyasaye gave Podho a command that he was never to attempt to do any work with it himself. If he should disobey this command then the hoe would lose its virtue and cease to work unaided. This happened before the advent of ALOO (sometimes called also MIHAHA). When eventually Podho was given ALOO, he gave the hoe over to her care, telling her at the same time of the command which Nyasaye had laid down. For a time all went well. When they wanted any digging to be done all they had to do was to take the hoe out to the site, show it what they wanted it to dig and leave it to do the work. In the evening it was brought in again. But one day curiosity was too much for ALOO. She felt that she must feel what it was like to turn up a few sods. So she picked up the hoe and with it turned up a little soil. Then becoming suddenly afraid she dropped the hoe and went home, but did not tell her husband, Podho. However she was unable to hide what she had done, for in the evening when they went to bring in the hoe, it lay where she had dropped it, and had done no work. Then the voice of Nyasaye said that as they were now so clever that they knew how to dig, never more would the hoe dig for them. So to this day woman is blamed as the one through whose wrongdoing the curse of work came to men.

562 However the tradition came into existence it reflects the common tendency of many creation stories to put the blame on the woman,

1: Box 11 E-4 (no date) 1952 FL11 Lwo FL11

776 believed to be the creator and originator of all things but he is not worshipped. Birth and death are ascribed to his action. According to Hanson, Nyasa is found in large trees, and in time of trouble or sickness offerings are made to him of an animal killed under a large tree; the meat is eaten at a little distance away.(1)

[773] Johnston states that the Lwo believe in a supreme god, Chwong, which is the same for the sun.(2) Dhan, however, relegates the sun to an inferior position and writes that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.(3) Northcote states that Lwo worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the new moon appears.(4)

It is impossible at present to give a comprehensive account of Lwo beliefs from the scanty information available.

ANCESTRAL SPIRITS

● 775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost (*jwiem*, pl. *jwiemdi*) and the Lwo methods of dealing with it. *Jwiem* is the Lwo equivalent of the Shilluk *ocen*, the Anholi *lwem*, Lango *ekpen* and the Acholi *mirmi*. A spirit which has been forgotten by the living; the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - any of these may become a *jwiem*, and cause harm to those who wronged it. The Lwo regard ghosts as one of the principal causes of sickness and other misfortune, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful sanction of conduct within the family and kinship group.(5)

[783] 624

775 The diviner (*nyango*) discovers the cause of sickness and, if it is due to a particular spirit, sacrifices are offered at his grave with appro-775 priate ritual. If the ghost is not appeased by this attention, another magician is called in, the *ngolo*. To protect the sick man's homestead the *ngolo* buries in or near it a pot containing medicines. In the last resort the *jadilo* is called in; as in sacrifices and the ghost warned that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 Normally, a ghost only haunts a kinsman, but a man who has been mur-783 dered may haunt his murderer. Purificatory rites are performed for anyone who has killed a man in battle; these are conducted by a man called *jagot* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the gourds used by diviners and answer the questions put to them.

children that he had left a beautiful country in the heavens where the people were all bright like fire, and that when they were dead, they would all go and meet those people.

Ramogi, the great grandson of Ajuridde, taught the Ja-Luo the custom of mixing cow's urine with the milk.

Mbonga, the eldest son of Ramogi, was the first member of the Ja-Luo to migrate southward into Kavirondo, and his brothers followed him; upon their arrival, they found the Bantu Kavirondo in possession of the land, but gradually drove them back.

The Bantu Kavirondo are descended from one Magonaga. . .

The Masai are descended from a Ja-Luo youth who, when out one day herding cattle, absconded into the woods, driving off the cattle; a woman who was lazy, and would not cultivate, crept away and joined him, and they became the progenitors of the Masai; they live by eating herbs and drinking milk to this day.

The Nandi and Lumbwa are descended from Alunga, a son of Ramogi.

Rajidi, a son of Ajuridde, is the ancestor of all the other people on earth, Europeans, etc.

This account was given me by an old chief living away in the hills to the south of Kavirondo Gulf, a man who has probably not seen half a dozen Europeans in the whole of his life. He told me that, in his youth, the old chiefs had many more legends, but the young men of to-day took but little interest in such things, and they were all rapidly being forgotten. He confided to me that his neighbours imputed to him the power of being able to transform himself at will into the shape of an ox and other animals, but he gravely assured me that these slanders were quite unfounded, and were a source of great embarrassment to him.

The version of the legend, given above, differs considerably from those previously recorded, and many new names appear. Most of the new names, however, are the names of tribes living in South Kavirondo, or Ugoya as it is often called, *e.g.*, Nyanduga, Kalandanya, Kalondo, Kaloch, Kadou, Uchiong. As these were near neighbours of his ancestors, their names would be more likely to be remembered.

There is, I think, enough internal evidence to show that this is really a very ancient genealogy, brought down from the Nile valley by the people when they migrated to the south.

An examination of the three versions of the genealogy of the Ja-Luo just given will lay bare many discrepancies, the presence of which, to my mind, gives an air of great genuineness to the information, and is, in a way, proof of the age of the myth.

Like the genealogy of the Uganda kings given in Mr. Roscoe's paper,[1] and, for the matter of that, like many other genealogies of world-wide fame in the ancient history of more civilised countries, we have in the Ja-Luo genealogy a succession of mythical personages and demigods at one end of the line, and at the other end,

CHAPTER XXVI

SICKNESS, DEATH, BURIAL, WARFARE, INDUSTRIES, RELIGION AND RELATIONSHIPS

Treatment of the sick—ghostly possession—death and mourning—death of a wife—manner of conducting warfare—treatment of a warrior who has slain one of the enemy—agricultural pursuits—cow-keeping—oxen used as riding animals—mode of building—religious beliefs—terms of relationships.

Treatment of the sick. Sickness is thought to be due to one of two causes: it may be, and the people think most frequently is, the result of magic which has been worked by some person who wishes to give pain or even to cause death because of a grievance, real or imaginary; or it may be due to some ghost. Under either circumstance, when a serious case of sickness occurs, the family seek the aid of a medicine-man who by his various tests and incantations discovers the cause; and, in a case where magic has been worked, he not only discovers the cause but also discloses the name of the culprit, who is thereupon sought and asked to give his motive for afflicting the sick person, and is paid to release him from the spell. Should the man have intended to kill the other because he has suffered some discourtesy or received some offence at his hands, he would probably have speared his shadow, so that the sick person will die unless the spell or magic is removed. Again, it may be that some magic has been worked and certain objects have been hidden near the house which are causing the sickness; these have to be removed and the spell broken before any drugs or treatment will avail the sick man. The perpetrator will only remove these when his grievance has been settled and he has received the needful compensation. In the case of a ghost, the medicine-man will tell which ghost is working the trouble and why it is thus causing sickness.

753 755 [754] 753 755 775

10: Reecoe M-5 (ca. 1900)1915
FL11 Lee FL11

753 The ghosts are usually those of grandparents who afflict
755 grandchildren because their father has failed to fulfil the
775 duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order
769 a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

828 **Ghostly possession.** Fits are supposed to be the manifesta-
775 tion of ghostly possession. They can often be overcome by
761 giving the person warm blood to drink drawn from the veins of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

765 she makes a new girdle from papyrus while still at the river, and wears it as she returns to her village. She is then free to remarry.

775 Dead people are sometimes said to come to life again. This is reported to take place within a short time after death. It is said that the spirit had gone on a journey and had returned after the man was thought to be dead, but in time to stop the funeral. The supposed dead person sneezes and revives, the sneezing being thought to be the signal that the spirit has returned from his journey.

764 **Death of a wife.** Should a wife die before her husband, her body is buried in the house, and, when the husband dies, he is buried in the goat-house near. He may not be buried in the same house with his wife. The animal offered at a man's funeral is always an ox, while it is an old cow that is offered at a woman's funeral. The skin from the animal is used to wrap the body as a shroud. The meat from the animal is divided in the following manner: a shoulder is retained for the dead and is eaten by the mourners at the grave, the second shoulder is for the relatives in the village, and the remainder, with the exception of the neck, is for the guests who live at a distance: the neck is given to the medicine-man.

766 762 A suicide is buried in the open, never in a house. Should the death have taken place in a house, it is burned down, for no one will live in it.

Warfare.

721 **Mode of conducting wars.** The people are not fond of war and fortunately their wars are never very serious matters. Cattle-lifting and women-stealing are the chief causes of fighting. The battles take place after short notice, when it is found that cattle have been robbed or when the alarm is given that a woman has been captured by some other clan. When a fight is impending, the attacking party drive a few cows to some spot where the other party may see them and challenge the others to come and take them. The party challenged must either attempt to carry off the cows while the others protect them, or they must pay a fine imposed by the attacking army.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

The warriors are armed with long-bladed spears and use large shields three feet high and of a V shape, behind which the bearer crouches and is completely hidden. The shields are made of cow-hide and are so dried that they are hard enough to resist a spear-thrust. Each warrior is painted with red and white clay in fantastic designs and wears a head-dress. Some of the head-dresses are like helmets adorned with ostrich feathers, while others are small straw hats such as a child's doll might wear.

The battle is decided when the cattle are carried off by the one party or when the other party prove themselves strong enough to retain them. The victors dictate terms of peace and the vanquished pay a fine in cattle and women.

Treatment of a warrior who has slain one of the enemy. When a warrior kills another in battle, he is isolated from his village, lives in a separate hut some four days, and an old woman cooks his food and feeds him like a child because he is forbidden to touch any food. On the fifth day he is escorted to the river by another man who washes him, a white goat is killed and cooked by the attendant, who feeds the man with the meat, the goat-skin is cut into strips and put upon the man's wrists and round his head, and he returns to his temporary home for the night. The next day he is again taken to the river and washed, and a white fowl is presented him. He kills it and it is cooked for him, and he is again fed with the meat. He is then pronounced to be clean and may return to his home. It sometimes happens that a warrior spears another man in battle and the latter dies from the wound some time after. When death takes place, the relatives go to the warrior and tell him of the death, and he is separated at once from the community until the ceremonies above described have been performed. The people say that the ceremonies are necessary in order to release the ghost of the dead man, which is bound to the warrior who slew him and is only released on the fulfilment of the ceremonies. Should a warrior refuse to fulfil the ceremonies, the ghost will ask, "Why don't you fulfil the ceremonies and let me go?" Should the man still refuse to comply, the ghost will take him by the throat and strangle him.

775 133 In one form or another the word *cien*, and in some degree the notion of ghostly vengeance for which
171 it stands, have been recorded for a number of Nilotic languages: *cien* for the Shilluk and Nuer, *acien* for the Dinka, *acieni* for the Anuak, *tchien* for the Luo of the Bahr al-Ghazal, *lacen* for the Acholi, and *chyen* for the Lango.

753 Very little is known about this concept among the Luo of
755 Kenya. Roscoe (*The Northern Bantu*, 1915, pp. 285f. and
775 289) tells us that sickness may be due to a ghost, and that a medicine-man is consulted to find out which ghost is causing the trouble and the cause of its dissatisfaction. These troublesome ghosts are usually those of grandparents who afflict their grandchildren because their children have been neglectful of filial duties. The medicine-man orders a shrine to be built by the grave of the aggrieved grandparent and the sick person's father there offers a sacrifice. Ghosts may also possess persons and cause them to have fits. When a man kills another in war the ghost of the dead man is thought to cling to his slayer until it is released by ceremonies. Other writers on the Luo do not add to this information, and in view of our ignorance about the subject I record what few notes I have on it.

775 A troublesome ghost is called *jacien* (plur. *jociendi*), a
626 word translated 'devil' by the Fathers of St. Joseph's Society (*A Handbook of the Kavirondo Language*, 1920, p. 8). When a ghost is aggrieved it is unhappy among the dead and may cause injury to those who wronged it in life, the verb *cieno* and the noun *cien* being used to describe this ghostly vengeance. In the course of my inquiries I was told that the following are typical reasons for a dead person haunting a kinsman: a man is killed and his kinsmen do not exact vengeance or compensation for his death; a man dies unmarried owing to lack of cattle; a man is blamed for some action and commits suicide; a girl is forced into marriage and commits suicide; a son dies while resentful because his father has favoured his brothers; a married woman dies after being accused of witchcraft and beaten; a man dies in a state of shame for some action of his, or in resentment for some affront; a woman dies after an

[p. 86 B]

775 626 unsettled quarrel with her husband or one of her co-wives; and a ghost is forgotten by his kin. It is said that if a corpse smells it is a sign that the dead person is ill disposed. As the Luo regard the ghosts as one of the principal causes of sickness and other misfortunes and since it is believed that almost any wrong done to a kinsman may be punished by him after his death, it may be supposed that this representation is a powerful sanction of conduct within the family and kin. I was told that any old person who is neglected may cause a relative to be more attentive by the threat 'You will see me,' meaning that when the person is dead he will haunt those who have neglected him unless they make amends. People who are happy and contented in life do not cause trouble when they are dead. It is the disgruntled and resentful who cause trouble.

753 755 775 [787] Luo who fall sick get a diviner (*ajuoga*) to discover the cause, and if he says that the sickness is due to a particular ghost on account of some grievance they hasten to compensate (*colo*) the ghost for the wrong they have done him by sacrificing an animal or fowl at his grave. It is customary to sacrifice a quail or fowl for a sick woman and a sheep or goat for a sick man. When a beast is sacrificed it is first tethered while whoever is conducting the ceremony makes an invocation (*lamo*) over it. If the sacrifice is acceptable to the ghost the animal urinates. They then rub its back (*wiro*) with the moist earth where it has urinated, and afterwards sacrifice it. The meat is eaten by the sick man's kin and a strip of the skin is tied round his wrist.

755 775 If the *jacien* is not appeased by sacrifice they may get a magician called *mugalu* to protect the sick man's homestead. He buries a pot containing medicines in or just outside the homestead. If the ghost continues to cause trouble they summon an exorcist (*jadilo*). He first sacrifices an ox and warns the dead man that if he is not content with this sacrifice he will dig up his bones and burn them and throw the ashes into lake or marsh. Luo told me that they prefer to get a Bantu to do this for them, if it is found to be necessary, and that sometimes instead of digging up the dead man's bones the exorcist makes a hole in the grave and pours boiling water down it.

[p. 86 c]

775
783 It seems that normally it is only kinsmen who haunt a man, but any man who kills another, whether he be related to him or not, is in danger of ghostly vengeance. For this reason a Luo does not care to spear an adulterer found with his wife. Also, as Roscoe says, a man who slays another in war may be injured by his ghost if certain rites are not performed. These purificatory rites, called *gut*, are conducted by a man, called *jagut*, who has himself killed a man and been through the ceremony. The slayer comes back from the fight to his homestead with a crowd of his companions, who make a demonstration there, singing and pulling out the eaves of his mother's hut. His father and mother strip themselves and cover their bodies with ashes. The slayer remains outside the homestead and there the *jagut* pierces the beak of a fowl and hangs it round his neck. He then cuts the beak of the fowl and it is killed when it falls. The slayer may now enter the homestead, but not through the gateway. A special entrance is cut for him through the euphorbia hedge which encircles the homestead.

[p. 87a]

775 He goes straight to the hut of the *pim*, the old woman
783 of the home, and there a goat is thumped and kicked to death. Afterwards it is skinned and cut open. The heart is extracted and bits of it are put by the *jagut* to the lips of the slayer and of some of his companions. He cuts strips from the skin of the goat and lays them along the backs of the slayer's fingers. He also gives the slayer medicines, among them a wild pig's tusk, which the slayer wears round his neck. The man is now purified and may drink milk again.

[114] Roscoe's account is very different from that given to me by Luo, which I have recounted above.

775 Clearly there is much more to be discovered about Luo beliefs about ghosts than what I have recorded, but I can only add to my account that the word *jociendi* is sometimes used for ghosts in general—and not with special reference to troublesome ghosts—and that some ghosts appear to be thought to become nature spirits dwelling in water and in the air, and others to occupy the gourds used by diviners and to answer questions the diviners put to them.

[p. 87 b]

Burial Customs of the Wa-Kavirondo in the Kisumu Province. 35

By A. S. Millikin

764 When a Kavirondo dies he or she, as the case may be, is stripped of everything in the shape of clothing and ornaments and these, as a rule, are distributed amongst the children, should the dead person have any; if not, they are taken by the near relatives. As soon as the person has expired the relatives in the same "boma" commence howling and crying, and in some cases this is done before the sick person has expired, but is close to death.

The first persons informed of the death are those relatives and friends residing close at hand, who arrive quickly to join in the mourning and do their share of crying.

The relatives and friends from a distance begin to arrive decked out in all their finery, bringing food for the dead, and also some of their cattle, as a rule a few cow and [765] bull calves. The mourning lasts for about a fortnight, but the body is kept only for about five hours after death, when it is buried underneath the floor of the hut of the dead person; but should several people have been buried there before and no space left, the body is buried just outside the hut, on the left-hand side.

As a rule after one person is buried in the hut, if it is intended to bury a second, and even a third person in the same hut, it is customary to knock out the back part of the hut and enlarge it.

● 775 The Kavirondo belief is that the dead can hear, and this is their reason for burying their dead in and close to their huts, as they like the dead to hear what they say.

764 The grave is dug about 4 feet deep and is circular, and the dead person is put there in a doubléd-up position. The body is buried quite naked, but sometimes the skin on which the person slept, or which he wore, is placed at the bottom of the grave.

When the grave is filled up, the earth is put back in small pieces, and is pressed tightly down, so that when all the soil is put back the surface is absolutely level, and to the casual observer it would not appear that the earth had been disturbed. As a precaution against hyænas and other wild animals a species of cactus is placed for a few days over the grave.

765 Should the dead person be a grown male, the wife or mother or the nearest relative of the dead man will cry continually for three months for about an hour before day break, but will stop when day breaks.

A peculiar custom is followed by the near relatives, who, during the first few days of mourning, smear their faces with wood ashes.

764 When a grown-up person dies, male or female, neighbours will come and hold a "ngoma" (dance), dressed up in all their finery, especially the warriors, who walk into the "boma" and march round on the inside, passing the hut of the dead person and sticking their spears into the roof of the hut. They continue to march round two or three times, finally passing the dead person's hut and withdrawing their spears,

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

avoid the immediate consequences and as a result war broke out between the people of Seme and the people of his tribe, Ugenya. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It is, to my knowledge, the only clan in Luo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Joluo attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Joluo had developed several devices to deal with cases of homicide. A wife could be married in the name of a murdered youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was deflowered by a stranger (*jokawiny*)

the bridegroom and part with her parents. The bridewealth payments now begin and the wife's parents try to hurry up the payments by luring her home on frequent visits. The bridegroom cannot prevent her departure or demand her return. To get her to return he hands over another animal and she then stays with him for a short while. This procedure is repeated until the bride is definitely recognised as his wife and stays with him except for brief visits to her old home.

The *riso* ceremony is the binding act of marriage. After it the husband is entitled to redress if the wife has intercourse with other men. As the husband is anxious to start a home and cannot do so while his wife keeps running back to her parents, he presses for the *riso* ceremony to be held as soon as he has paid 6 to 12 head of cattle. It is rare for a marriage to be broken off after this stage has been reached. The *riso* ceremony is held in the husband's homestead and is a day of celebration. The wife is given a series of presents by her husband's people, each gift being named as it is presented to her. She herself keeps none of them and they are taken by the girls of the *riso* party from her parents' village.

The final ceremony takes place a few months later when the husband tells his wife to cook for him instead of cooking in his mother's hut. Usually after the birth of the first child he begins to built an *ot* - a proper dwelling; up to this time the couple have lived in the bachelors' hut (*simba*). Necessary household articles are collected by the wife from her parents' home and so, after a great number of ceremonies and rituals, the union is accomplished and the basis of a family is laid.

RESPECT (*LUR*)

The Luo practise extensive avoidance as a part of the general attitude of respect to a wife's family. A man turns his back to his parents-in-law when speaking to them and avoids them if he meets them on a path. He never visits his mother-in-law naked.(1) This attitude of respect is extended to all the members of his wife's lineage, particularly the older people, and including the lineage of her maternal uncle. The husband's brothers, on the other hand, respect only his parents-in-law and immediate kin of their generation.

The avoidance rules are relaxed as the marriage gradually grows more stable and children are born. A ceremony is held at the birth of the first child to enable the husband to enter his mother-in-law's hut and eat there. The husband and his brothers are invited to eat after a goat has been presented to them.(2)

RITUAL AND OTHER CULTURAL FEATURES

RELIGIOUS BELIEFS

The Luo believe in a supreme being whom they call Nyasi. He is

(1) Evans-Pritchard, *Africa*, XX, p.141. (2) *Ibid.*

776 believed to be the creator and originator of all things but he is not worshipped. Birth and death are ascribed to his action. According to Roscoe, Nyasi is found in large trees, and in time of trouble or sickness offerings are made to him of an animal killed under a large tree; the meat is eaten at a little distance away.(1)

[777] Johnston states that the Luo believe in a supreme god, Chieng, which is the name for the sun.(2) Stam, however, relegates the sun to an inferior position and writes that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.(3) Northcote states that Luo worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the new moon appears.(4)

It is impossible at present to give a comprehensive account of Luo beliefs from the scanty information available.

ANCESTRAL SPIRITS

775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost *(jacien,* pl. *jociendi)* and the Luo methods of dealing with it. *Jacien* is the Luo equivalent of the Shilluk *cien*, the Acholi *lacen*, Lango *chyen* and the Anuak *acieni*. A spirit which has been forgotten by the living; the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - any [753 of these may become a *jacien*, and cause harm to those who wronged it. The 626] Luo regard ghosts as one of the principal causes of sickness and other misfortunes, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful sanction of conduct within the family and kinship group.(5)

755 The diviner *(ajuago)* discovers the cause of sickness and, if it is due to a particular spirit, sacrifices are offered at his grave with appro-775 priate ritual. If the ghost is not appeased by this attention, another magician is called in, the *mugalu*. To protect the sick man's homestead the *mugalu* buries in or near it a pot containing medicines. In the last resort the *jadilo* is called in; an ox is sacrifices and the ghost warned that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 Normally, a ghost only haunts a kinsman, but a man who has been mur-783 dered may haunt his murderer. Purificatory rites are performed for someone who has killed a man in battle; these are conducted by a man called *jagut* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the gourds used by diviners and answer the questions put to them.

Beliefs.—They call the Divinity by the name Chieng, which is the sun; when a man comes out of his house in the morning he spits to the east and in the evening he expectorates to the west. If the sunset is extremely red it is said to be a sign that an important man will die in the tribe. They believe that the spirit of a man goes upwards at death.

If a hailstorm occurs no one goes to work in the fields on the following day.

Shooting stars are said to be a sign of war.

FOOD PRODUCTION AND KINDRED MATTERS, AMONGST THE LUO.

By Archdeacon W. E. Owen.

(Paper read at the 3rd Annual Scientific Meeting held in Nov., 1933.)

Soil:

134 The production of food must necessarily be associated with knowledge of the soil. The principal soil varieties have been named by the Luo, and the methods appropriate to each variety are well known. Black cotton soil, called " anywang," occurs over a wide area, mainly around the lake shores, and is conspicuous in the locations of Uyoma, Karachwonya, Kasigunga and the Kano Plains. Red earth, called " lwala," is, speaking generally, found further back from the lake, on the higher lands, and is to be found over wide tracts in Central and South Kavirondo, a notable location being North Gem, in Central Kavirondo. Sandy soil, called " kwoyo," is generally found in the neighbourhood of outcrops of granite, which is a prominent feature in many parts. The locations of Asembo in Central Kavirondo, and Suna in South Kavirondo are good examples of areas where this sandy soil is abundant. Murram, called " gu " when solid and " ge " when disintegrated into a soil, occurs in places all over the country, Sakwa and Alego in particular providing many examples of it. Stony soil, called " kite," is to be found over large stretches, particularly in those neighbourhoods where escarpments rise from the regions round the lake. Though the labour involved in the cultivation of this stony soil is very great, where there is pressure of population, every available patch is made to produce food.

Rainfall:

132 Over certain sections of the country rainfall is very uncertain. The worst locations in this respect are lower Seme, Uyoma, Sakwa, Kadimo, parts of Asembo, Mirunda, Kasigunga and Rusinga. In other districts rainfall is abundant, running from forty to sixty five inches in the year, well distributed over the months, with the exception of January and early February. January is reckoned to be the driest [526] month of the year, and is the month when there is most relaxation from agricultural operations, this being the favourite time for the inter-clan wrestling matches.

789 Contrary to what many would expect, amongst people who
782 periodically suffer from lack of rain, the Luo have developed no system
776 of rain makers. At the top of Usenge Hill in Kadimo, there is still to be seen a site marked by a collection of votive pots, where the local

789 782 776 elders gathered to offer sacrifice and supplicate the local spirit, together with the clan spirits, in times of great drought, but this is entirely different from the rain-making cult. Even in this instance, it is doubtful whether the ceremony has not been influenced in large measure by the neighbouring Bantu peoples. The particular guardian spirit of this hill, is reputed to be a fabulously big snake, so enormous as to be able to encircle the hill with its body. Away from the Lake shore, which suffers most from uncertain rainfall, the Luo account very easily for the fact that they have no rain-makers. They simply say that they never have lack of rain, so why should they have rain-makers.

791 But though they have no rain-makers, they have a term for rain-maker, whom they call " Jajimb koth." When they need a rain-maker they employ either a Bantu from the Basiekwe clan of the Banyole, or one from Mudhiero, Yiro in Marama. And, of course, it is not alone for agriculture that rain is needed. The fishing in the rivers suffers greatly when the rivers run low, and fishermen not infrequently call in the aid of the rain-maker. On the lower reaches [782] of the Nzoia River, there existed a custom now happily extinct, according to which human sacrifice was made to the spirit of the river. The unfortunate person to be sacrificed was a girl, generally a young one and ill-favoured, who was bound, and some accounts say stunned, before being cast into the river. Rain-makers still flourish, though shorn of much of their influence and tribute. Only a few years ago I was in Uyoma during a time of rain shortage. I happened to be collecting genealogies, and was visiting the old men for this purpose. The conversation turned on the lack of rain, and I asked had they sent for the rain-maker. I really did not expect that they would have done so, and was somewhat surprised to find that they had sent their offerings to one of the Bantu of the Basiekwe clan. It seemed a pity that they should waste their substance on what could do them no earthly good, so I spent some time trying to convince them that the [609] rain-maker had no power to bring rain. They listened very politely, but at the end of it were " of the same opinion still." I left them gently poking fun at them for being so credulous. I was about a mile or less from my camp, and during my walk home, suddenly, from nowhere, clouds rushed up, a violent rain storm pelted down and I got thoroughly drenched. I would have given a good deal to have been able to listen to the comments of those who had heard so politely my well-meant arguments. Incidents somewhat like this are, no doubt, responsible for the deep seated faith in the rain-makers' powers. It did not convince me.

241 791 The preparation of the soil for the seed was, and is, performed without any ceremony of invocation preceding it, except when the land had been taken in conquest from enemies. In the latter case the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

butter being used for cooking a special meal which is eaten by the owner of the cow and his wife; a little of the butter is set aside and they smear it on their lips, but none of it may be smeared on their bodies. After the meal has been eaten, the cow is milked regularly and the milk may now be drunk by all the family.

Oxen used for riding. Oxen are frequently used for riding. The young men train the animals to this and ride them constantly. They turn them as they wish by prodding the side of the animal's cheek with a stick from which it turns away. The animals are trained, however, to obey the voice rather than wait for the stick. They trot along at a fast rate and cover the ground quicker than a man can walk.

Sheep and goats. Sheep and goats are kept by all villagers. Goats especially are eaten by men and women without any restrictions. Fowls are also kept, though, as is usual among most African tribes, fowls have to find their own food, and their chickens are constantly preyed upon by hawks and kites, and those that grow up are of a poor and miserable kind.

Building.

Architecture and mode of building. The houses are round huts with conical thatched roofs They have an outer wall of stakes three and sometimes four feet high with mud smeared over them on the inside and a central pole passing through the roof, to which the rafters are attached. The roof is thatched with grass and the end of the central pole, which passes through the roof, is rudely carved. The houses are grouped together, leaving room enough to pass between them, and a growing fence surrounds them. Many villages have no outer fence, but are built high up the hill-sides for protection from hostile clans.

Religion.

Religious beliefs. Apart from worship of the dead and a belief in ghosts, the people have little religion. They call the supreme being Nyasi, who, they say, is to be found in large trees. In times of trouble or sickness they make offerings to him of an animal which is killed under a large tree, and the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

776 782 flesh is cooked and eaten near by, though sometimes the meat is taken a little distance away and is not eaten under the shadow of the tree.

789 791 **Rain-making.** Rain-making is an important ceremony, but it is performed by a Musoga priest who lives among the people for the purpose of assisting them in discharging those religious obligations which they consider necessary yet do not themselves understand how to perform. The man is treated with great respect and has a comfortable existence among them.

Relationships.

601 **Terms of relationship.** The following terms of relationship were supplied by the Rev. J. J. Willis, now Bishop of Uganda, formerly a C.M.S. Missionary at Maseno, Kavirondo, who says that the pronominal forms for Father and Mother are used, that is, each person says "My father" or "My mother" (m.s. = man speaks, w.s. = woman speaks).

Father, won, wora
Mother, min, mama
Eldest brother (m.s.), kayo, ng'amodwong'ena
Eldest sister (w.s.), nyamin madwong', nyamera madwong'
Sister (m.s.), Nyamin, Nyamera.
Father's brother, omin won, omin worwa
Father's brother's wife, min, minwa mama
Father's brother's child, owat, owadwa
Father's sister, wa, waya
Father's sister's husband, chwor wa, chwor waya
Father's sister's child (boy), wod wa, wod waya
Father's sister's child (girl), nyar wa, nyar waya
Mother's brother, ner, nera
Mother's brother's wife, chi ner, chi nera
Mother's brother's child (boy), woda ner, woda nera
Mother's brother's child (girl), min, mama
Mother's sister, min, mama
Mother's sister's husband, won, wonwa
Mother's sister's child (boy), owat mar nyina hao, owadwa mar nyina hao

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

husband and runs away, the amount which he has already paid on her behalf is returned and the marriage is broken off. If a woman finds herself unmarried after a long period, it is customary for her to go to a chief or a rich man and state that she has come to stay and cook for him. In such case she is usually taken to wife, but a very small complimentary present is paid for her. Chiefs may have from ten to forty wives. The Ja-luo are, generally speaking, very moral. They do not intermarry in

436. EMPTYING THE FISH-BASKETS (JA-LUO)

the same clan, but a man may marry the daughter of one who bears the same name as himself.

The Ja-luo believe in *a supreme God* whom they call "Chieng." This, however, is the same name as the sun. When a man comes out of his house in the morning, he spits towards the east, and in the evening he spits towards the west. If the sunset is extremely red, it is said to indicate the approaching death of an important person. They believe that after death the spirits of the departed go up to the sky. If a hailstorm occurs, no one goes to work in the fields on the following day. Shooting stars are said to be a sign of war. They believe that people can be killed by *witchcraft*, and that a wizard has only to show "medicine" to a person

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

together again, and singly or in twos and threes run out and go through a fight with some invisible foes, again presumably, the evil spirits. They are very serious all the while, and the rest watch in silence their champions as they charge, retreat and cower down behind the huge shields. Then comes more feasting, with the customary offering to the sun, and finally they disperse.

The wailing is kept up in the case of a chief for six days, and performed twice a day at sunrise and sunset, but after the day of the dance each village mourns by itself; for a common person three days is the limit.

The corpse is buried in a recumbent position in the deceased's hut, but the hut continues to be occupied, generally by the deceased man's heir; it is not at once destroyed or disused, as some authorities, among them Sir C. Eliot, maintain. Last of all, when the mourning is over, an offering of beer, grain, and chicken flesh, is put on the grave.

The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, "It does not matter how much you pray, you fall sick and die just the same." The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits.

Witchcraft, however, and demonology occupy their minds far more. The wizard is greatly dreaded, and it is easy for an unscrupulous Kavirondo to obtain his neighbour's property by accusing him of having killed one of his relations by witchcraft, knowing that he will have his neighbours' support and sympathy. The wizard is sought both for good and evil purposes; his aid is invoked alike to detect criminals and to do harm to an adversary. In a recent case brought before the writer a man was accused of having murdered one of his wives by witchcraft. According to his accusers, the supposed murderer missed his razor and accused two of his wives of the theft. They both denied all knowledge of the missing article, and he gave them till the evening of that day to find it. When their term of grace came to an end, and the razor was not produced, he was alleged to have struck one of his wives, who was on the point of bearing a child. He then produced two charms which he affixed to their respective huts, threatening that the thief would be detected by the charm and would die. Next day the woman who was said to have been struck died after producing a still-born child. The curious result was that the man was tried for murder, the accusers believing that the crime had been committed by witchcraft, and the magistrate holding that, if the man caused his wife's death at all, it was by the blow which he was alleged to have given her. The blow turned out to be a myth, and the man was discharged, much to his accusers' disgust.

When a Kavirondo wishes to kill his enemy secretly, the usual method is to bury a dead rat or chicken at his victim's door. If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

this number, 90 were male suicides and 130 female. I have selected for the purpose of this chapter 10 male cases and 13 female cases as typical, and these were investigated in more detail to provide examples. Considerable time was spent among the villagers in each case, and full discussions were held with the elders in an attempt to determine the motive and the events which led up to the suicide. For obvious reasons, I shall not use correct names when describing these cases.

MALE SUICIDES.

Male suicides in Luo usually follow loss of status. Seven of the ten cases can be so classified. The first five are of the type which involved intense emotional feelings of shame, loss of honor and status within the framework of the indigenous culture. Following these are two case histories of suicides which involved loss of status in the acquired or modern sense. Two cases will be described which involved the loss of status through poverty and the loss of traditional respect of sons, and finally one case which resulted from social ostracism.

The first suicide concerned a man whose younger brother married before he did. In Joluo society, men of the extended family marry in strict order of status, that is, the senior son of the senior wife must marry first. It may happen that he is younger in chronological age than, perhaps, a son of a more junior wife, but even in this circumstance, the younger son in years, who is senior in status, is technically married before his brother—that is, the payment of the first animals for a young girl allow the senior son to marry.

Suicide Case No. 1.

A young man who was the senior son of a senior wife was chronologically the oldest of all the sons in the village. His father and mother were both dead and, although he would eventually become head of the homestead, until he married he

776 believed to be the creator and originator of all things but he is not worshipped. Birth and death are ascribed to his action. According to Roscoe, Nyasi is found in large trees, and in time of trouble or sickness offerings are made to him of an animal killed under a large tree; the meat is eaten at a little distance away.(1)

[777] Johnston states that the Luo believe in a supreme god, Chieng, which is the name for the sun.(2) Stam, however, relegates the sun to an inferior position and writes that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.(3) Northcote states that Luo worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the new moon appears.(4)

It is impossible at present to give a comprehensive account of Luo beliefs from the scanty information available.

ANCESTRAL SPIRITS

775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost *(jacien,* pl. *jociendi)* and the Luo methods of dealing with it. *Jacien* is the Luo equivalent of the Shilluk *cien*, the Acholi *lacen*, Lango *chyen* and the Anuak *acieni*. A spirit which has been forgotten by the living; the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - any [753 626] of these may become a *jacien*, and cause harm to those who wronged it. The Luo regard ghosts as one of the principal causes of sickness and other misfortunes, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful sanction of conduct within the family and kinship group.(5)

755 The diviner *(ajuogo)* discovers the cause of sickness and, if it is 775 due to a particular spirit, sacrifices are offered at his grave with appropriate ritual. If the ghost is not appeased by this attention, another magician is called in, the *augalu*. To protect the sick man's homestead the *augalu* buries in or near it a pot containing medicines. In the last resort the *jadilo* is called in; an ox is sacrifices and the ghost warned that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 Normally, a ghost only haunts a kinsman, but a man who has been mur- 783 dered may haunt his murderer. Purificatory rites are performed for someone who has killed a man in battle; these are conducted by a man called *jagut* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the gourds used by diviners and answer the questions put to them.

Ordeals.—They have a form of ordeal called Kiviri; a small pot of water is taken and a little *wimbi* flour and a bit of the medicine are put into the water; if the mixture boils over the man is guilty, and *vice versâ*. 695

Another ordeal is as follows: a piece of calabash open at both ends is placed on a stone in a bowl of water (Fig. 12). Water is ladled up from the bowl and poured into the calabash, and normally it immediately runs out where the calabash rests on the stone; the medicine man however puts some medicine into the water, and if the man is guilty the water no longer runs out at the bottom of the calabash, and eventually the water runs over the top. I have seen this performed and found that it was the medicine that enabled the calabash to be filled; this medicine was the crushed up leaves of a kind of mimosa, and being of a fibrous nature it stopped up the points of leakage between the calabash and the stone. There is another trial by ordeal: some dry flour is given to the suspected person, if innocent he can swallow it, and *vice versâ*.

FIG. 12.—THE ORDEAL OF THE CALABASH, OFTEN USED FOR THE DETECTION OF THIEVES, ETC.

Omens.—If the omen bird cries out on the left side of the road it is bad if the journey is for war, but if the journey is a mere visit the person will get food. If the bird cries out on the right side it is good for war but bad for visiting. If a cat crosses the road from right to left it is a good omen, if *vice versâ* it is bad. If you see a rat on the road and it runs in front of you it is a good, but if it crosses the road it is an inauspicious sign. 787

In some clans it is lucky for the first child to be female and in others it is *vice versâ*. [777]

If on a journey a man strikes his little toe on either foot it is a very bad sign, if he strikes the big toe it is propitious. If a man whose eldest child is a boy is travelling and the first person he meets is a man it is a good sign, but if a woman it is bad, and *vice versâ* if his eldest child is a girl.

They profess to be able to tell whether a man will be killed on an expedition or not by examining the entrails of an ox or sheep. Some even say that in this way a skilled soothsayer will prophesy future events; for instance, he will perhaps say that in so many days news of fighting will arrive, or that a certain disease will appear, or that in say three days a white cow will arrive at the village.

The head chief of each tribe decides when the people are to plant their crops, and some chiefs are said to be able to foretell whether the harvest will be good or bad. The chief Odera is said to have prophesied the advent of European rule when he was quite young. They go to the Nyole rainmaker Mgahanya for rain, and also went to his father Ligiri. [241]

Names.—Many names of men and women are the same, others again only differ in the first letter; for instance, Apio is generally a female name and Opio a male name. 551

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

754 in order to kill him. If a person is thought to be bewitched, the medicine
[683] man concerned is caught and forced to remove the spell, afterwards being punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkingo." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a
695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

787 As regards *omens*: If a bird sings on the left-hand side as a man is starting on a journey, the journey, if for war, will be unlucky; but if
● 777 it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that
787 is likewise a bad sign. They profess to be able to foretell events by *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad prophesied the coming of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 On the occasion of a *birth* the infant, if a boy, is kept inside the house
[844] for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

while relations of a personal kind and kinship links between individuals run across their common frontiers and are compelled to do so by the exogamous rules obtaining in Luo society.

613
614
778

Several of the clans and maximal lineages possess sacred spears and other objects believed to have belonged to their founders. The best known sacred spear (*tong ma lisua*, spear of sacrifice) is the *tong* Alego, the spear of Alego, the founder of the JoAlego clan. In Ugenya the JokaGer clan have several such spears and there are others in possession of the lineages descended from Cuanya to the south of the gulf. Where there are important stranger lineages in a tribe they may also have their sacred objects, e.g. in Alego the KaLuo and the JokOgelo have sacred spears and the JoAgoro have a sacred stone and a sacred pot handed down from their founders. These objects are symbols of the unity of a clan or lineage and, by extension, of the tribe or tribal segment in which it is dominant, and they were used ritually in time of war or of common calamity, such as drought and invasion by locusts. They seem generally, if not always to be held by the senior line (*dho ot ma duong*) of a lineage or clan and are kept either in a granary or in hiding in the bush. The senior line is often called on by junior collateral lines to perform important sacrifices for them and the senior lineage ought to provide the sacrificial beast at ceremonies common to all the lineages. I was told also that while each lineage had its *won gweng*, 'father of the land' the *won gweng* of the senior lineage had chief prestige among them.

[782]
[554]

613
614
784
551

Some clans and lineages have certain ritual prohibitions (*kwer*), mostly on certain foods, particularly kidneys and liver. The Luo do not give the impression of attaching much importance to them and if a man and a woman observe the same taboo it is not in itself a bar to marriage. Reference must also be made to clan and lineage honorific, or praise, names. The *nying paak* is generally derived from the name of a paternal ancestor whose name is a lineage cognomen, e.g. Okwiri (see the chart of the JoOwila clan) can be called, according to the circumstances, *wud* (son of) KoOkelo, *wud* KaJeje, and *wud* Owila. These names are much used at communal gatherings, expecially at large beer parties.

613
526

A feature of clanship which would seem to be of some importance is the annual inter-lineage wrestling. Unfortunately, I only became aware of these shortly before I left Luoland and had afterwards no further opportunity to enquire further into the custom, or to discover whether it is practised all over Luoland or only in some tribal areas, such as U-yoma where the closely related collateral lineages wrestle for practice prior to the wrestling matches between the big lineages. Thus the Ko-Okwiri are matched against the KoObong, then these two lineages together against the KaAtuenga and KaAbudha, and so on. The lineages send a messenger to challenge the other party and when they meet an elder presides over the joint bouts and the exhibition matches between famous wrestlers on each side. The matches are said to occasion much excitement among the spectators.

613
614

The sketch given above of the Luo clan is only an outline delineating feature of it. A little detail is filled in here and there in the following

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kavirondo FL4
Nandi FL13

B 778 769

excitement would then ensue and stupendous efforts would be made to recover the cow, which rarely failed to be returned to the owner before nightfall in order to redeem the sacred stone.

L 769 778 782

The Ja-Luo do not erect altars to the spirits of their ancestors like the Bantu Kavirondo, but for all that they believe in the influence of the spirits of the departed. If a man is stricken by illness, he will make a feast at the door of his hut, and he will take small pieces of meat and throw one to each of the four quarters of the compass; he will then fill his mouth with native beer and squirt a mouthful out on the ground in different directions and finally in a similar way toss out spoonfuls of *mtama* porridge in various directions as propitiatory offerings, at the same time imploring the spirits to take the food and not to worry him.

Charms.

B 789

Charms are legion among all the Kavirondo, and like other native races (and European, too, for the matter of that), they make no attempt to explain why such and such a charm should produce a certain effect.

The Awa-Tsoso tie a feather from a white chicken on the end of a stick as a charm to keep off hail; the sticks, which are about four feet long, are planted at intervals in the fields of beans and sem-sem; some seem to pin their faith to a wisp of grass which is tied to the stick and placed among the growing crops in the same way. This was only noticed among the Eastern Tsoso people of the Koweri clan, but is probably wide spread.

B [824]

The Tiriki people suspend a ball of clay by a string which is fastened to a stick, and plant one of these in a field of sweet potatoes or ground nuts to prevent thieving; the ball of clay has one of the yellow fruit of the common wild *Solanum* stuck into it.

N 789 824 728

The use of this combination of the fruit of the Solanum and clay, as a charm for good, seems to be rather widespread, for at the close of the Nandi campaign of 1900 when the chiefs were making overtures for peace, they brought to the Government station a native stool on which was a conical mass of moist red clay which rather reminded one of a child's mud pie; this was studded all over with the yellow Solanum fruit, and was said to be great peace medicine.

B 751

In some parts of Bantu Kavirondo, an old earthenware cooking pot will often be seen fixed as a finial on the point of one of the natives conical huts. This is a charm to prevent the children becoming cross eyed, for it is said children, when quite babies, are often stricken with a disease of the eyes which leaves a chronic squint; the charm does not render them immune to the disease, but averts the after effects; this belief occurs among many tribes in Bantu Africa, and the same charm is used.

B 824 778

Among charms we may perhaps mention that curious tree the *Ekirikiti* or, as it is called in Kavirondo, the *Murembe* tree (*Erythrina tomentosa*) which is remarkable both for its brilliant red flowers, and from the fact that it bears its leaves and flowers at different seasons.

795
782
839

have been more common in South Kavirondo whither the cult had spread and had been received with enthusiasm.

795
778

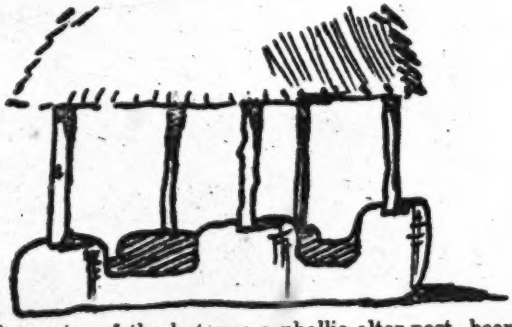
The priests started " schools " which they usually placed on hill-tops, and in the best proselytising traditions, attracted potential adherents by giving feasts of their slaughtered cattle. They also built here and there what might be called groves or places for the worship of Mumbo where sacrifices were made to the accompaniment of many obscenities and dancing.

In some of these Groves were wooden idols, one of which has been presented to the Natural History Museum by Mr. C. M. Dobbs, late Provincial Commissioner for Nyanza Province. This practice of constructing sacred Groves to Mumbo and erecting idols is interesting since all the people who were questioned about this cult said definitely that such things had never been commanded by Mumbo himself. True, he had said that there were to be sacrifices made to him with dancing to the accompaniment of drums and bull-roarers (without musical accompaniment), but he meant them to take place in each boma. No instructions had been given for groves or idols.

An extract from the report of the District Officer who found the idol is worth inserting at this point:—

" . . . .The meeting place of the cult consisted of a beautifully swept enclosure adjoining the High Priest's Boma and capable of seating some two hundred people. From the next boma to that of the High Priest ran a made path, four feet wide and trenched at the sides . . . . The enclosure was surrounded by a well-built dry stone wall. In the centre was a little semi-open hut about six feet in diameter, finished with white mud . . . . There was no door, it appeared symmetrical all round, thus:—

[346]



" In the centre of the hut was a phallic altar-post, bearing traces of blood-stains . . . . The High Priest's daughter produced some unpleasant animal relics from a hole in the wall in the enclosure. In the Western corner a bush plant (Nyaluthkoth) had been planted. . . .

795
778
In the Eastern corner was a small length of inner wall covered with dry grass, from which a shrub was growing so as to leave a covered but hollow space between the walls."

795 The altar-post mentioned in the report and which is now in the
778 Museum, is a piece of wood standing some 3½ to 4 feet high and about
5 or 6 inches in diameter. One end has been carved with the result
231 that it appears to be an unmistakeable phallus. That this is intentional, however, has been strongly denied by all those questioned about it, and, from the manner of my informants, I am inclined to believe that what they say is true—as far as it goes, and for the following reasons. In every Luo boma the cattle are tied up at night to wooden posts embedded in the ground. Each beast as a rule has
[531] a post—called in Dholuo, "Loch,"—to itself. Where the owner of the boma has an exceptionally fine bullock he marks it out for distinction by putting a metal bell—not unlike a Swiss cattle-bell—round it's neck and further he carves it an especially ornamental Loch. This carving is almost invariably phallic in shape, and I expect that the idol in the Museum was probably a loch uprooted from a nearby boma.

795 The point which was stressed to me was that although nearly all
778 carved Loches appear to be undeniably phallic, yet this is entirely accidental and has no intended sexual symbolism or meaning whatsoever. It was just the custom to carve them thus.

174 Now I am prepared to believe that the phallic appearance of these
831 Loches is produced unconsciously and without sexual significance, but, considering the geographical origin of the Luo and further the nature of the Mumbo beliefs, I consider that it is more than probable that the Loches in their present-day domestic capacity are the unconscious relics of phallic cults and practices handed down from unremembered antiquity, and have by now lost all their former phallic meaning. That they have been seized on as symbols in this religion is not surprising when one considers firstly their probable origin, which I have just indicated, and secondly the fact that the gospel of Mumboism in its promises of plenty without having to work for it (the phallus always having been the symbol of Fertility and Plenty) is typical of all phallic religions. If their choice of a phallus for a symbol is not an unconscious re-emergence of long forgotten rites, then it is an extremely interesting instinctive gesture that their choice of emblem should coincide with that of other and unconnected races who held parallel beliefs.

795 It would seem then that Mumboism is a mixture of the old Luo
174 religion of sun worship, and of an even older religion, long forgotten in the mists of Time and now reappearing in a new guise.

795 The prophesies of Mumbo having failed, the cult is dying out,
797 especially in Central Kavirondo, though it appears to be rather more tenacious in South Kavirondo. Further, active discouragement by the Government and the work of the Missions will soon banish it

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

less as titular owner of the whole herd. The scheme of division may be represented as in the diagram below. All other livestock is divided in the same way. The eldest son of the first wife must marry before any other sons can do so, and if the first wife has no sons the rest must wait till there is no further chance of her bearing any. When the first wife dies, the second wife becomes chief wife of the homestead, but a first wife's full status can only be succeeded to when she is replaced by a sister and a new homestead is built. The property of a barren wife is inherited by a stepson who is adopted into her household to do the man's work in it.

CATTLE HERD

All herded together

Head of homestead titular owner of all

1. *Cattle of the* abila
Strict property of homestead head.

Used to help sons or brothers' sons to marry, or to marry new wives for homestead head.

Residue ultimately inherited by the youngest son of the homestead, who also takes the father's share of cattle from any subsequent marriages of sisters.

All derived from the heifer and bull taken by the father at every daughter's marriage, and from their increase.

Milk from these used by the homestead head.

Cattle of the wives' houses
Most to *mikayi*, next to *nyachira*, rest among *rero* wives.

2. Cattle strictly property of the wives.

Ultimately inherited by youngest son of each house.

All derived from the heifer called *rach kede* received by the mother at each daughter's marriage, and from the heifer of *ataka* and bull settled upon a wife by her father at the end of her marriage ceremonies.

Milk from these used by the wives.

3. Cattle held for sons' marriages.

Any residue inherited by youngest son of each house.

All derived from the cattle received at daughters' marriages other than those specified under 1 and 2.

Homestead head has over all discretion in the original division of accruing cattle, and can persuade wives to give up cattle from category 3 to help stepsons to marry, and may by agreement take an extra heifer from those received at a daughter's marriage, to complete the bridewealth of one of his other wives.

Succession to authority in the family, and also in the lineage, depends on a combination of three qualifications: primogeniture, personal suitability in character and wealth, and appointment by one's predecessor. Primogeniture is highly regarded and preferred, but is never an absolute rule. Whenever an eldest son is unsuitable, or another agnatic relative is clearly more suitable, the latter is chosen to succeed. But a successor must be named by his predecessor, and as a result of the strong common sentiments in family and lineage segment, the predecessor's appointee seems usually to have been the one whom the elders of the group wish to elect when they meet at the funeral of the predecessor to confirm his choice.

Ancestor worship is falling into abeyance among the Luo of today. All those who go to school become at least nominal Christians, and this affects most of the young, while the old are becoming diffident in the performance of rites which no longer command universal respect. The spirit shrines which used to be placed between the first and second wives' huts are hardly seen today, nor the three stones which used to stand before the spirit shrine, with the stone of sacrifice buried beneath (see

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

diagram, p. 17). It is therefore difficult to give a precise account of the relation between ancestor worship and lineage formation. It is noteworthy, however, that the ritual formula at a sacrifice was not spoken by any particular descendant of the recipient of sacrifice, but by any elders of his lineage present, who repeated it in turn while waiting for the sacrificial bull to urinate or excrete. If it refused to do this it was rejected and another substituted, and it was the elder who was repeating the formula at the moment when the bull urinated or excreted who had to make the sacrifice. The usual formula was *wuorwa, luong' wuoru uchiemo*—'our father, call your father and eat'—followed by the bidding of a blessing on the particular matter in hand. In the funeral ritual more emphasis seems to be laid on insulating the living from the ill will of the dead than on securing the status of the latter in the other world. Similarly at any sacrifice, ancestors called to share are bidden to give the blessings for which they are asked on pain of being jeered at and despised. Children may be named, according to the father's judgement, after various circumstances or persons linked with the child's birth or ascertained in dreams. But if the child cries unusually the diviner (*ajuoga*) is called to discover which ancestor is seeking to have the child named after it. In this way the child may be named after its own father or mother, or any other relative, male or female. The same group of names tends to occur frequently in converging lines of ascent, especially those of famous ancestors, which are repeated particularly often, but there is no regular belief in the necessary reincarnation of ancestors in alternate generations.

IV. LINEAGE CONCEPTS

THE special terms which the Luo use for lineages show the distinctions which they make between different aspects of the activity of these groups. Frequently all these terms may be applied to the same group on different occasions depending on the context. The most important of these terms are *dhoot, gweng', libamba*, and *anyuola*. *Gweng'* and *dhoot* are used of class A segments only, *anyuola* of class B segments only, and *libamba* may be used of either. The use of these terms is always logical when interpreted in relation to the structural position of the speaker, but their etymology does not always seem consistent with this unless it is understood in a symbolic sense. It may be best to give a general account of the usage and etymology of each one, followed by some quotations from informants.

Dhoot (pl. *dhondi*) is used for all those lineages which are corporate landholding units. They are the lineages already referred to as class A. Some idea of the variations in their size and population is given in the figures included in Figs. 1 and 2, and the maps (Figs. 3, 4, and 5). They carry general social functions. Each manages its political, jural, economic, ritual, and other affairs through a council of elders representing its major segments and recognizing one of their number as leader. Organized on a territorial basis, they are the units of primary settlement or multiples of them,[1] responsible for the acquisition, apportionment, and use of land. They are the basis of a whole series of corporate group activities ranging from

[1] By settlement I mean simply a defined area of territory, containing the dwellings and all the land resources of a specified social group. The Luo have no villages in the sense of recognized aggregations of dwellings larger than those of the family.

[text continues on p. 27]

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

together again, and singly or in twos and threes run out and go through a fight with some invisible foes, again presumably, the evil spirits. They are very serious all the while, and the rest watch in silence their champions as they charge, retreat and cower down behind the huge shields. Then comes more feasting, with the customary offering to the sun, and finally they disperse. 764

The wailing is kept up in the case of a chief for six days, and performed twice a day at sunrise and sunset, but after the day of the dance each village mourns by itself; for a common person three days is the limit.

The corpse is buried in a recumbent position in the deceased's hut, but the hut continues to be occupied, generally by the deceased man's heir; it is not at once destroyed or disused, as some authorities, among them Sir C. Eliot, maintain. Last of all, when the mourning is over, an offering of beer, grain, and chicken flesh, is put on the grave.

The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, "It does not matter how much you pray, you fall sick and die just the same." The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits. 776 781 782

Witchcraft, however, and demonology occupy their minds far more. The wizard is greatly dreaded, and it is easy for an unscrupulous Kavirondo to obtain his neighbour's property by accusing him of having killed one of his relations by witchcraft, knowing that he will have his neighbours' support and sympathy. The wizard is sought both for good and evil purposes; his aid is invoked alike to detect criminals and to do harm to an adversary. In a recent case brought before the writer a man was accused of having murdered one of his wives by witchcraft. According to his accusers, the supposed murderer missed his razor and accused two of his wives of the theft. They both denied all knowledge of the missing article, and he gave them till the evening of that day to find it. When their term of grace came to an end, and the razor was not produced, he was alleged to have struck one of his wives, who was on the point of bearing a child. He then produced two charms which he affixed to their respective huts, threatening that the thief would be detected by the charm and would die. Next day the woman who was said to have been struck died after producing a still-born child. The curious result was that the man was tried for murder, the accusers believing that the crime had been committed by witchcraft, and the magistrate holding that, if the man caused his wife's death at all, it was by the blow which he was alleged to have given her. The blow turned out to be a myth, and the man was discharged, much to his accusers' disgust. 754 754 674

When a Kavirondo wishes to kill his enemy secretly, the usual method is to bury a dead rat or chicken at his victim's door. If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day. 754

FL11 Luo FL11

while relations of a personal kind and kinship links between individuals run across their common frontiers and are compelled to do so by the exogamous rules obtaining in Luo society.

Several of the clans and maximal lineages possess sacred spears and other objects believed to have belonged to their founders. The best known sacred spear (*tong ma lisua*, spear of sacrifice) is the *tong* Alego, the spear of Alego, the founder of the JoAlego clan. In Ugenya the JokaGer clan have several such spears and there are others in possession of the lineages descended from Cuanya to the south of the gulf. Where there are important stranger lineages in a tribe they may also have their sacred objects, e.g. in Alego the KaLuo and the JokOgelo have sacred spears and the JoAgoro have a sacred stone and a sacred pot handed down from their founders. These objects are symbols of the unity of a clan or lineage and, by extension, of the tribe or tribal segment in which it is dominant, and they were used ritually in time of war or of common calamity, such as drought and invasion by locusts. They seem generally, if not always to be held by the senior line (*dho ot ma duong*) of a lineage or clan and are kept either in a granary or in hiding in the bush. The senior line is often called on by junior collateral lines to perform important sacrifices for them and the senior lineage ought to provide the sacrificial beast at ceremonies common to all the lineages. I was told also that while each lineage had its *won gweng*, 'father of the land' the *won gweng* of the senior lineage had chief prestige among them.

Some clans and lineages have certain ritual prohibitions (*kwer*), mostly on certain foods, particularly kidneys and liver. The Luo do not give the impression of attaching much importance to them and if a man and a woman observe the same taboo it is not in itself a bar to marriage. Reference must also be made to clan and lineage honorific, or praise, names. The *nying paak* is generally derived from the name of a paternal ancestor whose name is a lineage cognomen, e.g. Okwiri (see the chart of the JoOwila clan) can be called, according to the circumstances, *wud* (son of) KoOkelo, *wud* KaJeje, and *wud* Owila. These names are much used at communal gatherings, expecially at large beer parties.

A feature of clanship which would seem to be of some importance is the annual inter-lineage wrestling. Unfortunately, I only became aware of these shortly before I left Luoland and had afterwards no further opportunity to enquire further into the custom, or to discover whether it is practised all over Luoland or only in some tribal areas, such as U-yoma where the closely related collateral lineages wrestle for practice prior to the wrestling matches between the big lineages. Thus the Ko-Okwiri are matched against the KoObong, then these two lineages together against the KaAtuenga and KaAbudha, and so on. The lineages send a messenger to challenge the other party and when they meet an elder presides over the joint bouts and the exhibition matches between famous wrestlers on each side. The matches are said to occasion much excitement among the spectators.

The sketch given above of the Luo clan is only an outline delineating feature of it. A little detail is filled in here and there in the following

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kavirondo FL4
Nandi FL13

B 778 769

excitement would then ensue and stupendous efforts would be made to recover the cow, which rarely failed to be returned to the owner before nightfall in order to redeem the sacred stone.

L 769 778 782

The Ja-Luo do not erect altars to the spirits of their ancestors like the Bantu Kavirondo, but for all that they believe in the influence of the spirits of the departed. If a man is stricken by illness, he will make a feast at the door of his hut, and he will take small pieces of meat and throw one to each of the four quarters of the compass; he will then fill his mouth with native beer and squirt a mouthful out on the ground in different directions and finally in a similar way toss out spoonfuls of *mtama* porridge in various directions as propitiatory offerings, at the same time imploring the spirits to take the food and not to worry him.

Charms.

B 789

Charms are legion among all the Kavirondo, and like other native races (and European, too, for the matter of that), they make no attempt to explain why such and such a charm should produce a certain effect.

The Awa-Tsoso tie a feather from a white chicken on the end of a stick as a charm to keep off hail; the sticks, which are about four feet long, are planted at intervals in the fields of beans and sem-sem; some seem to pin their faith to a wisp of grass which is tied to the stick and placed among the growing crops in the same way. This was only noticed among the Eastern Tsoso people of the Koweri clan, but is probably wide spread.

B [824]

The Tiriki people suspend a ball of clay by a string which is fastened to a stick, and plant one of these in a field of sweet potatoes or ground nuts to prevent thieving; the ball of clay has one of the yellow fruit of the common wild *Solanum* stuck into it.

N 789 824 728

The use of this combination of the fruit of the Solanum and clay, as a charm for good, seems to be rather widespread, for at the close of the Nandi campaign of 1900 when the chiefs were making overtures for peace, they brought to the Government station a native stool on which was a conical mass of moist red clay which rather reminded one of a child's mud pie; this was studded all over with the yellow Solanum fruit, and was said to be great peace medicine.

B 751

In some parts of Bantu Kavirondo, an old earthenware cooking pot will often be seen fixed as a finial on the point of one of the natives conical huts. This is a charm to prevent the children becoming cross eyed, for it is said children, when quite babies, are often stricken with a disease of the eyes which leaves a chronic squint; the charm does not render them immune to the disease, but averts the after effects; this belief occurs among many tribes in Bantu Africa, and the same charm is used.

B 824 778

Among charms we may perhaps mention that curious tree the *Ekirikiti* or, as it is called in Kavirondo, the *Murembe* tree (*Erythrina tomentosa*) which is remarkable both for its brilliant red flowers, and from the fact that it bears its leaves and flowers at different seasons.

795 Lastly, my followers must immediately slaughter all their cattle, sheep, and goats. When this is done, I will provide them with as many more as they want from the Lake." Having said this, the snake disappeared into the lake.

Onyango soon set about spreading his gospel and, as was natural with so attractive a programme, it was not long before he had a considerable following. They were divided into what may be described as two Degrees. The First Degree consisted of those personally "called" [786] in very much the same way as Onyango had been " called." They were all men, mostly older men and the heads of Bomas. The "call" consisted in their throwing some kind of fit, possibly an ecstacy of religious exaltation, during which words poured from them in an un- [791] intelligible torrent. They became the priests and were in tremendous demand as witch-doctors since they soon were invested with, or themselves assumed supernatural powers.

761 For example, they were reputed to be able to recall to life a dying person or one who had just died. The procedure here began with the 795 priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called " Buombwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially " Called " by Mumbo himself, and also any other people who, although not specifically " Called," chose to join the cult.

795 At sunrise and at sunset all Mumboites stand facing the sun with 788 the first finger and thumb of each hand meeting to form a circle and held up to the eyes like binoculars. Having gazed at the sun intensely until they are completely dazzled, they stretch out their arms towards 782 it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 As was to be expected from a retrogressive religion which not only 782 encouraged but ordained idleness and uncleanliness, it was not long before its adherents, having nothing to do or to think about, began to indulge in unpleasant practices which the normal Jaluo, however 839 uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

795
782
839

have been more common in South Kavirondo whither the cult had spread and had been received with enthusiasm.

The priests started " schools " which they usually placed on hill-tops, and in the best proselytising traditions, attracted potential adherents by giving feasts of their slaughtered cattle. They also built here and there what might be called groves or places for the worship of Mumbo where sacrifices were made to the accompaniment of many obscenities and dancing.

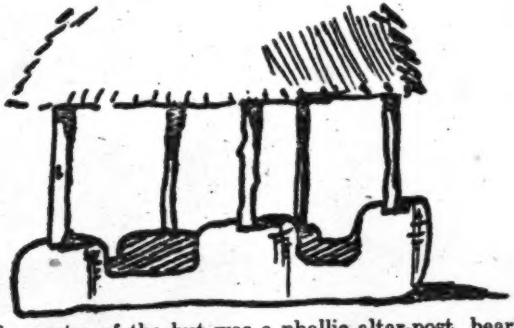
795
778

In some of these Groves were wooden idols, one of which has been presented to the Natural History Museum by Mr. C. M. Dobbs, late Provincial Commissioner for Nyanza Province. This practice of constructing sacred Groves to Mumbo and erecting idols is interesting since all the people who were questioned about this cult said definitely that such things had never been commanded by Mumbo himself. True, he had said that there were to be sacrifices made to him with dancing to the accompaniment of drums and bull-roarers (without musical accompaniment), but he meant them to take place in each boma. No instructions had been given for groves or idols.

An extract from the report of the District Officer who found the idol is worth inserting at this point:—

" . . . .The meeting place of the cult consisted of a beautifully swept enclosure adjoining the High Priest's Boma and capable of seating some two hundred people. From the next boma to that of the High Priest ran a made path, four feet wide and trenched at the sides . . . . The enclosure was surrounded by a well-built dry stone wall. In the centre was a little semi-open hut about six feet in diameter, finished with white mud . . . . There was no door, it appeared symmetrical all round, thus:—

[346]



" In the centre of the hut was a phallic altar-post, bearing traces of blood-stains . . . . The High Priest's daughter produced some unpleasant animal relics from a hole in the wall in the enclosure. In the Western corner a bush plant (Nyaluthkoth) had been planted. . . .

8: Shaw G-5 (ca. 1930)1932 FL11 Luo FL11

dowry had been paid; he was thus enabled to spread his payments of the bride-price over a longer period than would otherwise have been possible. Also the fact that the girl was with child prevented her from being carried off by any other man; apparently a not unheard of occurrence. 583

The wedding feast itself—the *kirisya*—took place in the bridegroom's *dala*. The bride arrived accompanied by her sisters, or, if her sisters were too young to go with her, by her brothers' wives. She was also attended by one older woman, perhaps a married sister, who acted as a chaperone. It was the special duty of this older woman to see that the bride was properly treated, and to make herself polite to the father and mother of the bridegroom. But with this excepion older men and women were never included in the bride's party. Any man who attached himself to it would have been laughed at for mixing himself up with an affair that concerned women only. On the other hand not only did the bridegroom's sisters attend the feast but, as well, all his brothers, half brothers, and first cousins (in other words all the people he called " brother "), the wives of his brothers, and all his male friends. 585

As a rule the wedding feast lasted only one day, but if the guests had come long distances, it might last two or even three days. The feast consisted of porridge and meat. The young people were not given beer, but the bridegroom's mother usually brewed a small quantity for her husband and his brothers.

The meat provided consisted of the flesh of a bull which was cut up and apportioned according to certain definite rules. The division was the duty of the bridegroom's father, who first of all cut a small piece from the neck and sent it into the bridegroom's mother, who waited in her hut to receive it. He then cut more small pieces from the neck and scattered them outside and inside her hut. This was an offering to the ancestral spirits, and was accompanied by the following prayer:— 585 782

Dho waniego dhiang mar dhakonye juogi duto ubi ucham bad jachien aketo nū tieloka kwara gi woura gidega umi ringere nyani okwe natu kiringia marach obed man gima maber dalo duto.

Prayer and offering were together intended to placate the ancestral spirits and to persuade them to bless the marriage. After this the right fore leg was cut off and placed in the centre of the mother's hut. This fore-leg had a special name, *badjachien* and was a gift to all the ancestral spirits. It was afterwards eaten by the bridegroom's father and mother, and part of it was dried and sent to the bride's mother.

The whole of the breast, with the exception of a small piece reserved for the bridegroom's brothers, is sent to the brothers of the 585 184

FOOD PRODUCTION AND KINDRED MATTERS, AMONGST THE LUO.

By Archdeacon W. E. Owen.

(Paper read at the 3rd Annual Scientific Meeting held in Nov., 1933.)

Soil:

134 The production of food must necessarily be associated with knowledge of the soil. The principal soil varieties have been named by the Luo, and the methods appropriate to each variety are well known. Black cotton soil, called " anywang," occurs over a wide area, mainly around the lake shores, and is conspicuous in the locations of Uyoma, Karachwonya, Kasigunga and the Kano Plains. Red earth, called " Iwala," is, speaking generally, found further back from the lake, on the higher lands, and is to be found over wide tracts in Central and South Kavirondo, a notable location being North Gem, in Central Kavirondo. Sandy soil, called " kwoyo," is generally found in the neighbourhood of outcrops of granite, which is a prominent feature in many parts. The locations of Asembo in Central Kavirondo, and Suna in South Kavirondo are good examples of areas where this sandy soil is abundant. Murram, called " gu " when solid and " ge " when disintegrated into a soil, occurs in places all over the country, Sakwa and Alego in particular providing many examples of it. Stony soil, called " kite," is to be found over large stretches, particularly in those neighbourhoods where escarpments rise from the regions round the lake. Though the labour involved in the cultivation of this stony soil is very great, where there is pressure of population, every available patch is made to produce food.

Rainfall:

132 Over certain sections of the country rainfall is very uncertain. The worst locations in this respect are lower Seme, Uyoma, Sakwa, Kadimo, parts of Asembo, Mirunda, Kasigunga and Rusinga. In other districts rainfall is abundant, running from forty to sixty five inches in the year, well distributed over the months, with the exception of January and early February. January is reckoned to be the driest [526] month of the year, and is the month when there is most relaxation from agricultural operations, this being the favourite time for the inter-clan wrestling matches.

789 Contrary to what many would expect, amongst people who
●782 periodically suffer from lack of rain, the Luo have developed no system
776 of rain makers. At the top of Usenge Hill in Kadimo, there is still to be seen a site marked by a collection of votive pots, where the local

789 elders gathered to offer sacrifice and supplicate the local spirit,
● 782 together with the clan spirits, in times of great drought, but this is
776 entirely different from the rain-making cult. Even in this instance, it is doubtful whether the ceremony has not been influenced in large measure by the neighbouring Bantu peoples. The particular guardian spirit of this hill, is reputed to be a fabulously big snake, so enormous as to be able to encircle the hill with its body. Away from the Lake shore, which suffers most from uncertain rainfall, the Luo account very easily for the fact that they have no rain-makers. They simply say that they never have lack of rain, so why should they have rain-makers.

791 But though they have no rain-makers, they have a term for rain-maker, whom they call "Jajimb koth." When they need a rain-maker they employ either a Bantu from the Basiekwe clan of the Banyole, or one from Mudhiero, Yiro in Marama. And, of course, it is not alone for agriculture that rain is needed. The fishing in the rivers suffers greatly when the rivers run low, and fishermen not infrequently call in the aid of the rain-maker. On the lower reaches [782] of the Nzoia River, there existed a custom now happily extinct, according to which human sacrifice was made to the spirit of the river. The unfortunate person to be sacrificed was a girl, generally a young one and ill-favoured, who was bound, and some accounts say stunned, before being cast into the river. Rain-makers still flourish, though shorn of much of their influence and tribute. Only a few years ago I was in Uyoma during a time of rain shortage. I happened to be collecting genealogies, and was visiting the old men for this purpose. The conversation turned on the lack of rain, and I asked had they sent for the rain-maker. I really did not expect that they would have done so, and was somewhat surprised to find that they had sent their offerings to one of the Bantu of the Basiekwe clan. It seemed a pity that they should waste their substance on what could do them no earthly good, so I spent some time trying to convince them that the [609] rain-maker had no power to bring rain. They listened very politely, but at the end of it were "of the same opinion still." I left them gently poking fun at them for being so credulous. I was about a mile or less from my camp, and during my walk home, suddenly, from nowhere, clouds rushed up, a violent rain storm pelted down and I got thoroughly drenched. I would have given a good deal to have been able to listen to the comments of those who had heard so politely my well-meant arguments. Incidents somewhat like this are, no doubt, responsible for the deep seated faith in the rain-makers' powers. It did not convince me.

241 The preparation of the soil for the seed was, and is, performed
791 without any ceremony of invocation preceding it, except when the land had been taken in conquest from enemies. In the latter case the

241 indicate that sowing time is at hand. In the autumn, there is the
826 ordinary African kite, which comes over literally, at times, in thousands, feeding in the air, and on the ground on the swarms of flying ants. Some withhold their sowing until these birds appear.

241 In exceptional cases an important sacrifice, called " bilo " was performed before sowing took place. If the " Jaduong' bilo " was
782 warned in a dream of impending disaster to the coming season's food supply, he called the elders of the community together for the purpose of the ceremony. " Bilo " was performed to avert any disaster threatening the community. It was always performed in the early morning, before the cattle had gone out to graze. The present " Jabilo " in Sakwa location performed the ceremony of " bilo " in 1931 when the people of Sakwa had a boundary dispute with their neighbours of Asembo. He performed it again in the early months of 1933 to get rid of the locusts. It is natural that not a few in Sakwa attribute the absence of locusts this year to the effect of this ceremony.

241 When the time was ripe for sowing, the " Mikayi " or chief wife
177 of the head of the community, was always the first to sow. None dare begin their sowing until the " mikayi " had thus given permission.
[626] Any who were so bold as to begin before the " mikayi " were made to feel the displeasure of the community. As recently as 1931 I have known a man to come under discipline for sowing too soon. But what with the efforts of the Agricultural Department, pressing upon the people the wisdom of early sowing, together with a widespread knowledge of the names of the months, re-inforced by the rise of individualism accompanied by the breakdown of tribal authority, the influence of the " mikayi " is steadily waning. Amongst the more advanced sections of the communities it has ceased to exist, and they are no longer subject to discipline for early sowing. After sowing comes a pause, but not for long. About April weeding begins. This is shared in by all. Amongst the sturdier crops, it is done by the hoe, but in crops like the small millet, called " kal," the seed is sown too closely for there to be room for a hoe, so it has to be done by hand, the weeders squatting down on their heels and pulling up the weeds. This results in a much trampled crop, but it very soon recovers, and suffers no damage. In recent years the Administration has made great efforts to get people to eradicate the striga weed, called by the Luo " hayongo." This weed shoots up, curiously enough, after the customary weeding has been done. The Luo let it grow in spite of the fact that they know that land infested with it must be left for a term of years. I have over and over again tried to persuade them of the wisdom and benefit of getting rid of it, but to no avail. Anything which comes after the routine weeding has been done is allowed to remain.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

butter being used for cooking a special meal which is eaten by the owner of the cow and his wife; a little of the butter is set aside and they smear it on their lips, but none of it may be smeared on their bodies. After the meal has been eaten, the cow is milked regularly and the milk may now be drunk by all the family.

Oxen used for riding. Oxen are frequently used for riding. The young men train the animals to this and ride them constantly. They turn them as they wish by prodding the side of the animal's cheek with a stick from which it turns away. The animals are trained, however, to obey the voice rather than wait for the stick. They trot along at a fast rate and cover the ground quicker than a man can walk.

Sheep and goats. Sheep and goats are kept by all villagers. Goats especially are eaten by men and women without any restrictions. Fowls are also kept, though, as is usual among most African tribes, fowls have to find their own food, and their chickens are constantly preyed upon by hawks and kites, and those that grow up are of a poor and miserable kind.

Building.

Architecture and mode of building. The houses are round huts with conical thatched roofs They have an outer wall of stakes three and sometimes four feet high with mud smeared over them on the inside and a central pole passing through the roof, to which the rafters are attached. The roof is thatched with grass and the end of the central pole, which passes through the roof, is rudely carved. The houses are grouped together, leaving room enough to pass between them, and a growing fence surrounds them. Many villages have no outer fence, but are built high up the hill-sides for protection from hostile clans.

Religion.

Religious beliefs. Apart from worship of the dead and a belief in ghosts, the people have little religion. They call the supreme being Nyasi, who, they say, is to be found in large trees. In times of trouble or sickness they make offerings to him of an animal which is killed under a large tree, and the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

776
782 flesh is cooked and eaten near by, though sometimes the meat is taken a little distance away and is not eaten under the shadow of the tree.

789
791 **Rain-making.** Rain-making is an important ceremony, but it is performed by a Musoga priest who lives among the people for the purpose of assisting them in discharging those religious obligations which they consider necessary yet do not themselves understand how to perform. The man is treated with great respect and has a comfortable existence among them.

Relationships.

601 **Terms of relationship.** The following terms of relationship were supplied by the Rev. J. J. Willis, now Bishop of Uganda, formerly a C.M.S. Missionary at Maseno, Kavirondo, who says that the pronominal forms for Father and Mother are used, that is, each person says "My father" or "My mother" (m.s. = man speaks, w.s. = woman speaks).

Father, won, wora
Mother, min, mama
Eldest brother (m.s.), kayo, ng'amodwong'ena
Eldest sister (w.s.), nyamin madwong', nyamera madwong'
Sister (m.s.), Nyamin, Nyamera.
Father's brother, omin won, omin worwa
Father's brother's wife, min, minwa mama
Father's brother's child, owat, owadwa
Father's sister, wa, waya
Father's sister's husband, chwor wa, chwor waya
Father's sister's child (boy), wod wa, wod waya
Father's sister's child (girl), nyar wa, nyar waya
Mother's brother, ner, nera
Mother's brother's wife, chi ner, chi nera
Mother's brother's child (boy), woda ner, woda nera
Mother's brother's child (girl), min, mama
Mother's sister, min, mama
Mother's sister's husband, won, wonwa
Mother's sister's child (boy), owat mar nyina hao, owadwa mar nyina hao

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

768 sick in the village and he witchdoctor says that the sickness is due to neglect of deceased's grave, and that they have to sacrifice a goat or a bull to propitiate him, 769 then they put some sticks round the grave again by way of a hut, in the doorway 753 of which they roast a chicken, and some blood of the sacrifice is put in a potsherd and placed on the grave.

On the anniversary of the death or thereabouts beer is brewn again. First 769 however deceased's son visits the witchdoctor, who tels him to sacrifice a special ●782 cock, e. g. a big black one, or one with an extra toe, or one with very short legs, ect. Until such a cock is found, as indicated by the witchdoctor, the beer will be of 273 no use. Then the chicken is roasted and eaten, except for one leg which is put on the grave and covered with a basket. Now the *wimbi* for the beer is coarsely ground and put in pots for fermenting. After twelve days the fermented *wimbi* is roasted and the next morning dried. Unground *wimbi* is soaked in water, which is strained off again, and the grain remains for 3 days in covered pots in order to sprout, after which it is dried. When these ingredients are ready, then the next day another visit is paid to the witchdoctor, who again orders a special chicken to be sacrificed, this time e. g. a white one, which is killed and eaten in the morning. Now the [824 wives and children of deceased only pick some seed-pods of a certain wild plant 301] (*ochok*) which they string like beads on the stalk of creeping grass *(modhono)*. These strings they put round their necks, and also round the necks of the water-vessels with which they go to the well to fetch water for the further preparations of the beer. The water is put out in the sun, and when it has become luke-warm, it is poured on the fermented *wimbi* in big earthen pots. Next day the sprouted *wimbi* is ground and put in the beerpots too. The following morning early the relations put some of the beer, now ready, in a small vessel, which they put on the grave of deceased, with a reed in it, after which the people of the village take some of the beer and drink it. Presently they bring a cock which they suspend by its legs alive in the gateway of the kraal together with some secret medecine, and it remains hanging there till sunset. From 8 o'clock in the morning onwards all the relations, friends and neighbours come to partake of the beer, which is put in an enormus earthen pot *(mbiru)* in an open space outside, each visitor bringing his own reed for sucking the beer. Nobody can enter the kraal that day except by the gateway where the chicken is hanging, all the other entrances being closed up. And the chicken is hung in such a way that anyone entering has to touch it. Suppose a [754] person with an "evil eye" would enter for the purpose of bewitching somebody there, the medicine would start working on him; and he would leave the place with sore eyes, which would cause him much suffering. If this person, however, returns to the village, and owns up that he came there to bewitch somebody, he will be asked to spit on the ground, so that the person bewitched may not die; and doing so his eyes will heal again.

Beer is supplied to anybody entering the kraal for three days at a stretch. No food is cooked these days; if some food is brought from a neighbouring village they may take it but otherwise they live on beer only. All the children of round about, born about the time of persons death and called after him are carried by their mothers to this beer party. Each mother brings a cooked chicken and some

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

food for the child, but they themselves only drink beer. On the last day all the iron, brass and other ornaments which deceased used to wear are sprinkled with some beer, made of kaffir-corn, which has previously been sacrificed. Then the ornaments are devided amongst the relations, who will wear them in future. After this all go home.

Next morning a sheep is killed and eaten. The wet skin is called the garment of deceased, and as such is worn for that day by his eldest son. At night it is slung over the gateway, where in time it rots away or some hyena finds it and makes off with it.

Every person, whether man, woman or child, is buried absolutely naked, and without any ornaments; even the little brass rings with a big blue bead each, which the old men wear all along the edge of both ears are taken out immediately after his death. To this rule there is one exception only. A *jabilo*, who is not an ordinary medicine-man, but one who has secret medicine, which he does not use for evil purposes except in warfare, is considered the greatest among men. For this reason he is specially honoured at his death. A big bull is killed and offered as a sacrifice, and the *jabilo* is buried in the fresh skin of the animal.

Burial of a Woman.

From the moment of a woman's death wailing goes on till next morning about 10 o'clock, when either her husband or her son dig the grave. All her ornaments are taken off, like at the occasion of a man's death.

Every woman is buried inside her own hut; because a woman is called the owner of the hut *(wonjot)*; hence at her death the hut has served its purpose.

When the grave is ready deceased's husband, assisted by two other people put her down in it, lying on her left side (men on their right). Her children fill up the grave scraping the earth with hands and feet, heir backs towards the corpse. The wailing goes on for another half hour whilst the crowds gather.

Then all the women and girls prepare themselves for a kind of wardance to take place near the village. They take off their tassels which they throw on the roof deceased's hut. They smear themselves with mud, and dress themselves up in the war-dress of the men who came to the funeral (shields and spears left at home).

Whilst the girls and women are dancing to the beating of drums, the men and boys squat down in the village and smoke hemp. After about an hour they come back from the dance, return their apparel to the men and go home. But the men remain till the afternoon, and those living near by call again at night for a chat.

After 3 days the women of the neighbourhood gather again in order to cook and eat the dried meat, fish and other food which the deceased left in the hut at her death. After the meal they go to sweep the grave (on the 3rd day, not the 4th as after the burial of a man) gathering some earth of it in an old basket, which is put on the path outside the kraal together with her socalled pillow *(orindo)*. They also give away deceased's hoe to an old woman, and throw away its handle.

On the same day the husband of deceased and one old woman go round to the huts of the near relations, sprinkling in each hut some medicine, throwing in each hut the seedball of an ochokplant, and gathering from its inhabitants a small

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

this tail behind and receives a present from her husband. Afterwards it is considered very bad manners for a married woman to serve food to her husband without putting on this tail. On the other hand, if the husband or any other man should touch the married woman's tail, it is considered that he wishes to bewitch her, and such an offence must be atoned for by the usual sacrifice of a goat.

430. PATTERN FREQUENTLY SHAVED ON MEN'S HEADS (JA-LUO)

The Ja-luo *pull out the incisors* in the lower jaw. It may also occur amongst these people, as amongst the Lango tribes to the north, that not only the four incisors, but even the canines, are taken out, at any rate from the mouths of boys. They *do not circumcise*, nor do they *scar or tattoo* their bodies, with the exception that women raise three parallel lines of dots in a semi-circle on either side of the body, the ends of the semi-circle meeting in front just below the navel, and again on the backbone. If a man has killed an enemy in war, he propitiates his enemy's spirit by shaving his head for three days after his return. Heads of men are also shaved in the pattern given in the accompanying illustration (Fig. 430).

The Ja-luo, together with tribes remotely allied in origin, such as the Sūk and Lango, *ornament the outer rim of the ear* in a remarkable manner. About fifteen small holes are pierced along the edge of the cartilage, and a flattened ring of brass (looking in shape rather like a melon seed) is inserted. Hanging on the outer side of the brass ring is a large blue glass bead. In the lowest hole towards the lobe a plain brass ring is inserted. Regarding these blue beads Mr. Hobley writes: "For a long time I thought these blue beads were ordinary trade beads of the variety known as 'kiketi'; but upon inquiry I found this idea was indignantly repudiated. It was explained to me that the beads were picked up in the fields in the neighbourhood of the Maragolia Hills* after a heavy thunderstorm, and it was believed that they descended with the rain." Some of the chiefs also wear bits of jasper and chalcedony with a fine circular hole. These beads were formerly of great value, and were purchased at the rate of one cow per bead. They are said to have been picked up in the same way. Their name for these beads is

* In North Kavirondo.

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

765 a dead person shave their heads for three days after the death. The eldest son of the deceased sits on a stool outside the village, and has his head shaved. If any one of importance dies, the neighbours do not
766 cultivate for three days after the death. If a big chief dies, all the surrounding people collect at the village, and in such cases even hostilities between clans are suspended, and all join in the funeral rites of the late chief, even if he happens to be at war with some of his dependent clans. In the case of the death of a chief, a new hut is built. The grave of the chief is dug by his brother. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water-pot. Seeds of every kind of grain grown in the vicinity are put into the grave, but sweet potatoes are excluded. The people dance and drink "tembo" for ten days, and slaughter many oxen. The men wail for ten days, but the women wail every morning for a year. No one cultivates the fields for ten days.

428 When a man dies, his *property* goes to the brother, if the children are small. If the eldest son is grown up, he takes the property and gives his brothers a share, but a man is not allowed to take the amount paid by any one who marries one of his sisters. This marriage payment goes to
[587] the deceased father's brothers. The brothers of the deceased take his wives,
[622] but the eldest son probably takes the youngest wife of his deceased father. When a chief dies, the son whom he has chosen succeeds him. This successor is chosen really some years before the chief dies. The successor divides the private property of the chief with his brothers.

727 When a warrior *has killed a man in warfare*, he must (besides
●782 shaving his head) catch a fowl and hang it round his neck head uppermost. He must not enter his home village until this has been done. Whilst the fowl is suspended to the man's neck by the beak its head is severed from the body, and the head is left hanging from the man's neck. The warrior then enters the village, and shortly afterwards prepares a big feast to propitiate the man he has killed, so that his ghost may not give
788 trouble. If a house is struck by *lightning*, and any one is killed inside, the head-man of the village must obtain a male fowl of a red colour and walk round the house holding up the fowl three times. The house is then broken up, and the wood is used for other purposes. When desiring
728 *to make peace* with another tribe with whom they have been at war, they kill a sheep and put part of it into a wooden mortar such as is used for crushing grain. The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been worsted, and which is suing for peace, must
[231] then go to the head village of the conqueror and proceed to sweep up the cattle kraal. This is accepted as a kind of submission.

145 Like the Bantu Kavirondo, the Ja-luo are in the main *a healthy people.*

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

together again, and singly or in twos and threes run out and go through a fight with some invisible foes, again presumably, the evil spirits. They are very serious all the while, and the rest watch in silence their champions as they charge, retreat and cower down behind the huge shields. Then comes more feasting, with the customary offering to the sun, and finally they disperse. 764

The wailing is kept up in the case of a chief for six days, and performed twice a day at sunrise and sunset, but after the day of the dance each village mourns by itself; for a common person three days is the limit.

The corpse is buried in a recumbent position in the deceased's hut, but the hut continues to be occupied, generally by the deceased man's heir; it is not at once destroyed or disused, as some authorities, among them Sir C. Eliot, maintain. Last of all, when the mourning is over, an offering of beer, grain, and chicken flesh, is put on the grave.

The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, "It does not matter how much you pray, you fall sick and die just the same." The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits. 776 781 782

Witchcraft, however, and demonology occupy their minds far more. The wizard is greatly dreaded, and it is easy for an unscrupulous Kavirondo to obtain his neighbour's property by accusing him of having killed one of his relations by witchcraft, knowing that he will have his neighbours' support and sympathy. The wizard is sought both for good and evil purposes; his aid is invoked alike to detect criminals and to do harm to an adversary. In a recent case brought before the writer a man was accused of having murdered one of his wives by witchcraft. According to his accusers, the supposed murderer missed his razor and accused two of his wives of the theft. They both denied all knowledge of the missing article, and he gave them till the evening of that day to find it. When their term of grace came to an end, and the razor was not produced, he was alleged to have struck one of his wives, who was on the point of bearing a child. He then produced two charms which he affixed to their respective huts, threatening that the thief would be detected by the charm and would die. Next day the woman who was said to have been struck died after producing a still-born child. The curious result was that the man was tried for murder, the accusers believing that the crime had been committed by witchcraft, and the magistrate holding that, if the man caused his wife's death at all, it was by the blow which he was alleged to have given her. The blow turned out to be a myth, and the man was discharged, much to his accusers' disgust. 754 754 674

When a Kavirondo wishes to kill his enemy secretly, the usual method is to bury a dead rat or chicken at his victim's door. If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day. 754

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

less as titular owner of the whole herd. The scheme of division may be represented as in the diagram below. All other livestock is divided in the same way. The eldest son of the first wife must marry before any other sons can do so, and if the first wife has no sons the rest must wait till there is no further chance of her bearing any. When the first wife dies, the second wife becomes chief wife of the homestead, but a first wife's full status can only be succeeded to when she is replaced by a sister and a new homestead is built. The property of a barren wife is inherited by a stepson who is adopted into her household to do the man's work in it.

CATTLE HERD

All herded together

Head of homestead titular owner of all

1. *Cattle of the* abila

Strict property of homestead head.

Used to help sons or brothers' sons to marry, or to marry new wives for homestead head.

Residue ultimately inherited by the youngest son of the homestead, who also takes the father's share of cattle from any subsequent marriages of sisters.

All derived from the heifer and bull taken by the father at every daughter's marriage, and from their increase.

Milk from these used by the homestead head.

Cattle of the wives' houses

Most to *mikayi*, next to *nyachira*, rest among *rero* wives.

2. Cattle strictly property of the wives.

Ultimately inherited by youngest son of each house.

All derived from the heifer called *roch kode* received by the mother at each daughter's marriage, and from the heifer of *atake* and bull settled upon a wife by her father at the end of her marriage ceremonies.

3. Cattle held for sons' marriages.

Any residue inherited by youngest son of each house.

All derived from the cattle received at daughters' marriages other than those specified under 1 and 2.

Milk from these used by the wives.

Homestead head has over all discretion in the original division of accruing cattle, and can persuade wives to give up cattle from category 3 to help stepsons to marry, and may by agreement take an extra heifer from those received at a daughter's marriage, to complete the bridewealth of one of his other wives.

Succession to authority in the family, and also in the lineage, depends on a combination of three qualifications: primogeniture, personal suitability in character and wealth, and appointment by one's predecessor. Primogeniture is highly regarded and preferred, but is never an absolute rule. Whenever an eldest son is unsuitable, or another agnatic relative is clearly more suitable, the latter is chosen to succeed. But a successor must be named by his predecessor, and as a result of the strong common sentiments in family and lineage segment, the predecessor's appointee seems usually to have been the one whom the elders of the group wish to elect when they meet at the funeral of the predecessor to confirm his choice.

Ancestor worship is falling into abeyance among the Luo of today. All those who go to school become at least nominal Christians, and this affects most of the young, while the old are becoming diffident in the performance of rites which no longer command universal respect. The spirit shrines which used to be placed between the first and second wives' huts are hardly seen today, nor the three stones which used to stand before the spirit shrine, with the stone of sacrifice buried beneath (see

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

diagram, p. 17). It is therefore difficult to give a precise account of the relation between ancestor worship and lineage formation. It is noteworthy, however, that the ritual formula at a sacrifice was not spoken by any particular descendant of the recipient of sacrifice, but by any elders of his lineage present, who repeated it in turn while waiting for the sacrificial bull to urinate or excrete. If it refused to do this it was rejected and another substituted, and it was the elder who was repeating the formula at the moment when the bull urinated or excreted who had to make the sacrifice. The usual formula was *wuoṛwa, luong' wuoṛu uchiemo*—'our father, call your father and eat'—followed by the bidding of a blessing on the particular matter in hand. In the funeral ritual more emphasis seems to be laid on insulating the living from the ill will of the dead than on securing the status of the latter in the other world. Similarly at any sacrifice, ancestors called to share are bidden to give the blessings for which they are asked on pain of being jeered at and despised. Children may be named, according to the father's judgement, after various circumstances or persons linked with the child's birth or ascertained in dreams. But if the child cries unusually the diviner (*ajuoga*) is called to discover which ancestor is seeking to have the child named after it. In this way the child may be named after its own father or mother, or any other relative, male or female. The same group of names tends to occur frequently in converging lines of ascent, especially those of famous ancestors, which are repeated particularly often, but there is no regular belief in the necessary reincarnation of ancestors in alternate generations.

IV. LINEAGE CONCEPTS

THE special terms which the Luo use for lineages show the distinctions which they make between different aspects of the activity of these groups. Frequently all these terms may be applied to the same group on different occasions depending on the context. The most important of these terms are *dhoot*, *gweng'*, *libamba*, and *anyuola*. *Gweng'* and *dhoot* are used of class A segments only, *anyuola* of class B segments only, and *libamba* may be used of either. The use of these terms is always logical when interpreted in relation to the structural position of the speaker, but their etymology does not always seem consistent with this unless it is understood in a symbolic sense. It may be best to give a general account of the usage and etymology of each one, followed by some quotations from informants.

Dhoot (pl. *dhoudi*) is used for all those lineages which are corporate landholding units. They are the lineages already referred to as class A. Some idea of the variations in their size and population is given in the population figures included in Figs. 1 and 2, and the maps (Figs. 3, 4, and 5). They carry general social functions. Each manages its political, jural, economic, ritual, and other affairs through a council of elders representing its major segments and recognizing one of their number as leader. Organized on a territorial basis, they are the units of primary settlement or multiples of them,[1] responsible for the acquisition, apportionment, and use of land. They are the basis of a whole series of corporate group activities ranging from

[1] By settlement I mean simply a defined area of territory, containing the dwellings and all the land resources of a specified social group. The Luo have no villages in the sense of recognized aggregations of dwellings larger than those of the family.

[text continues on p. 27]

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

may be of Bantu origin. The facility with which the Luo incorporate linguistic borrowings even in the case of fundamental concepts (e.g. *Nyasaye*, God; *wasigu*, enemies, &c.) is in marked contrast to the persistence with which they have retained the other elements of their culture and imposed them on the non-Luo groups assimilated by them. The Luo sum up in the term *libamba* all those forces of friction and competition which weaken the solidarity of a lineage segment and lead to its further subdivision. The quarrels of uterine brothers and the jealousies of co-wives are regarded as typical of these. A *libamba* is, then, a rival lineage segment co-ordinate to one's own. When a man speaks of his *libamba* he always means a segment other than his own, but included in the same superordinate segment as is the one he has in mind as claiming his loyalty at that particular moment. It is those groups of *dhoudi* which stand in the *libamba* relationship to one another which play together at *adhula*, wrestle together, and fight together with clubs.[1]

The lineages of class B remain passive except when called into action in connexion with certain ritual situations, and the chance of this occurring depends mainly on their genealogical position. Those which are below the level of the minimal *dhoot* and *gweng'*, down to and including the members of compound and elementary families, are constantly being involved as groups in the many rituals which accompany marriages and funerals, the founding of new homesteads, the starting of cultivation, sowing and reaping, and the organization of other periodic affairs within the minimal *gweng'*. The class B segments above this level only come into action haphazardly according to the incidence of ancestral sacrifices. When any social group is faced with a misfortune for which no specific remedy is recognized, a diviner (*ajuoga*) is consulted, and sacrifice made to the patrilineal ancestor indicated as responsible for the trouble. Which one is selected depends on the gravity of the misfortune and the level of lineage grouping affected by it. The diviner is most likely to indicate one of the eponymous ancestors of *dhoudi* as they are most prominent in the minds of all. If, however, the eponymous ancestor of any other segment is indicated, it would emerge from its passivity into action. Even when it is the eponymous ancestor of a *dhoot* who receives sacrifice, some or all of its genealogical co-ordinates and subordinates may only be class B segments, and these would be called into action on such occasions since the sacrificing segment usually calls its co-ordinates to participate and is itself represented by its major segments.[2] All class B segments acting in this way, whether below or above the level of the minimal *dhoot*, are called *anyuola*. Even a segment which is itself a *dhoot* and *gweng'* may be called *anyuola* in this context. The etymology of this word[3] might well suggest a uterine principle of grouping. However, as with *dhoot*, every *anyuola* is a patrilineal descent group, and whether it takes its name from a man or a woman depends on the genealogical incidence of co-wives and uterine brothers and the circumstances which call into action the agnatic groups

[1] Cf. the Tallensi concept of *suuzot* (Fortes, *Dynamics of Clanship*, pp. 32, 37, 201). Here, too, there is the idea of a reciprocal relationship between co-ordinates, but to the Tallensi the chief emphasis is on the bond of unity resulting from ancestral brotherhood, whereas for the Luo it is on competitive subordination within a common superordinate. Co-ordinate segments are equally *libamba* to one another whether their eponyms were co-wives or uterine brothers.

[2] See below, p. 35. Cf. Fortes's analysis of the same principle among the Tallensi (*The Dynamics of Clanship among the Tallensi*, p. 31).

[3] *nyuol* n., birth; *nyuolo* v., to give birth. But it is possible to apply this root to procreation by men.

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

6. Liver and remaining ribs and offal: for all the women of the homestead.
7. Kidneys: for the woman's sisters still in their mother's house and their friends.
8. Customary portion for the eldest married daughter of the woman's mother.
9. Customary portions to be eaten, some raw, some cooked by *bulo*, by all the elders assembled for the distribution.

It is worth while to treat this one rite at length, because it is the prototype of so many others. Its especial significance is that it takes place at the lowest level of segmentary organization, that it is bound to occur in every family as often as a daughter is married off, and that it draws into a structured participation not merely lineage leaders and senior elders but every man, woman, and child in the family. When the Luo youngster of either sex begins to grasp why, on certain occasions, it receives a special supply of kidney or ribs to roast on the fire with its playmates, its education in the theory of lineage structure has begun. The same holds true for all the wives of the men who bring home their portions of meat to be cooked, and share them with favourite wives or children, or allow them the scraps.

There are many other occasions on which meat has to be ritually divided. In every case a similar procedure is followed, with the same articulation of lineage structure. There are the sacrifices previously mentioned, which are made to the ancestor indicated by the diviner as the cause of some misfortune. Sacrifice is also made usually within a year or so of the death of any elder of importance, and the level of lineage whose major segments are called to share in it depends upon the dead man's status. If he took part in the councils of the maximal lineage its major segments would certainly be called; if he was of less importance the major segments of a lineage at some lower level would be called. A further custom occasioning a demonstration of lineage segmentation is that whereby an elder of importance chooses a bull to be eaten after his death, the segments of his lineage dividing it among themselves according to principles similar to those of *riso*.

Besides sacrifices, every beer party, of whatever size and on whatever occasion, is also a display of lineage structure at one level or another. These parties are exceedingly frequent, and most frequent of all in the comparative leisure of the dry season, when there is a pause between the completed harvest and the next cultivation not yet begun. At this time few weeks will pass without a beer party somewhere in the vicinity, and often they follow on one another for days on end. In every one there is a core of elders who epitomize the structure of the lineage segments participating in the occasion. This is all quite apart from the small quantities of beer which old men like to drink with two or three neighbours independently of any ceremonial pretext. But all parties of any size have a ritual occasion, whether it be one of the innumerable occasions resulting from death which are strung out over a period of at least one and often two years, or in connexion with marriage, or for the settlement of the periodic and seasonal affairs of a class A lineage.

In the larger beer parties the pitchers of beer are distributed among lineage segments in the same way as are the joints of meat after a sacrifice. In all of them the order of drinking is strictly determined by lineage seniority, starting with the representatives of the major segments of the superordinate lineage, in the order of seniority of their eponymous ancestors, and downwards through the subordinate levels of the line particularly concerned. The level of major segments involved is always an index

20:Ominde 1-5 (ca. 1948) 1952
FL11 Luo FL11

as to which particular people should help her; this obligation merely rests on whomsoever happens to be present. The assistance of a midwife is required more for a first child than for those following. Anyone in the family may help the woman in an emergency; but the presence of the husband is not considered necessary unless the case is a difficult one. In a difficult labour several strong men may be required to hold the woman, but many women give birth to their babies without any assistance. The usual positions adopted are: lying on the back with knees bent, or sitting with the back supported by a tree. Some leaves serve for the mat. Older women often have their child without assistance, but it is an obligation upon everyone who finds a woman in need of help to assist her, even if she is unknown to them.

On some occasions a woman about to give birth is made to run, eventually being seated to deliver her baby. A light pressure is exerted on the shoulders. The instructions are given by midwives, who sometimes slap the woman across her face if she does not obey their orders.

After a child is born, cold water is poured over it to make it cry. If it does not cry, iron hoes are brought and a series of loud tinkling noises made as a form of persuasion. Among the pagans, tobacco smoke is sometimes puffed into the child's nose. When it has been made to utter its first cry, its head is shaped to the normal form, and while the nurse waits for the placenta, she cleans the baby's forehead with a soft leaf. Before the cord is cut it is tied with strips of dried banana leaves at three equal intervals for a girl and at four equal intervals for a boy, to indicate the length of the period of rest. The midwives used to chant a prayer, but this is now no longer heard. It is possible that this chant was a thanksgiving and a request for the newborn baby to fare well in life.

776 believed to be the creator and originator of all things but he is not worshipped. Birth and death are ascribed to his action. According to Roscoe, Nyasi is found in large trees, and in time of trouble or sickness offerings are made to him of an animal killed under a large tree; the meat is eaten at a little distance away.(1)

[777] Johnston states that the Luo believe in a supreme god, Chieng, which is the name for the sun.(2) Stam, however, relegates the sun to an inferior position and writes that when a man comes out of his house in the morning he spits to the east and then to the north, south and west and implores the sun to give him good luck.(3) Northcote states that Luo worship the sun and, to a lesser degree, the moon. A similar spitting ritual is practised when the new moon appears.(4)

It is impossible at present to give a comprehensive account of Luo beliefs from the scanty information available.

ANCESTRAL SPIRITS

775 There is very little information on the ancestral cult. Evans-Pritchard describes a troublesome ghost *(jacien,* pl. *jociendi)* and the Luo methods of dealing with it. *Jacien* is the Luo equivalent of the Shilluk *cien*, the Acholi *lacen*, Lango *chyen* and the Anuak *acieni*. A spirit which has been forgotten by the living; the ghost of a man who died resentful or angry - or of a murdered man whose kin have not exacted revenge - any [753 of these may become a *jacien*, and cause harm to those who wronged it. The 626] Luo regard ghosts as one of the principal causes of sickness and other misfortunes, and, since it is held that almost any wrong done to a kinsman may be punished by him after death, this belief is a powerful sanction of conduct within the family and kinship group.(5)

755 The diviner *(ajuago)* discovers the cause of sickness and, if it is due to a particular spirit, sacrifices are offered at his grave with appro-775 priate ritual. If the ghost is not appeased by this attention, another magician is called in, the *mugalu*. To protect the sick man's homestead the *mugalu* buries in or near it a pot containing medicines. In the last resort the *jadilo* is called in; an ox is sacrifices and the ghost warned that if he does not cease his activities his bones will be dug up, burned and the ashes thrown into the lake or marsh.

775 Normally, a ghost only haunts a kinsman, but a man who has been mur-783 dered may haunt his murderer. Purificatory rites are performed for someone who has killed a man in battle; these are conducted by a man called *jagut* who has himself slain a man in battle.

775 It is believed that some ghosts become nature spirits dwelling in water and air, while others occupy the gourds used by diviners and answer the questions put to them.

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Personal marks, etc.—They draw the six middle incisors in the lower jaw. 304
If a man does not have these teeth drawn it is said that his wife will die soon after marriage. The women tattoo a pattern on the chest and stomach, consisting of thin curved lines of dots on each side reaching round to near the spine, where they turn upwards. Males are not tattooed. The tattooing is done simply for ornament.

Circumcision.—They do not circumcise. If a man has killed an enemy in war he shaves his head three days after his return from fighting. He moreover 783
does not enter his village until a live fowl has been hung round his neck, the 727
fowl is then decapitated and the head of the fowl left hanging from the man's neck. Shortly after his return a feast is made to the man who has been killed, in order that his spirit shall not come and trouble the victor.

Dress, etc.—Unmarried men go naked (Plate V). Married men who have a 291
child wear a small piece of goat skin; this piece of goat skin is a most important 576
matter for a married man, for although practically useless as a covering he must on [606]
no account call to see his mother-in-law without this dress or she will be desperately hurt and insist on his paying up a goat. Even if he is properly clothed in European garments he must wear his goat skin underneath. Unmarried girls wear no clothes (Plate VI). Married women wear a tail of strings behind but not in front, like the Northern Kavirondo. Married women when they go to [574]
visit another village wear a goat skin slung from the shoulder, upon which curious patterns are cut. When a married woman first shows the tail, her husband presents her with a goat, which she sends to her father. It is very bad manners in a married woman to serve up food to her husband without wearing her tail, and the husband will probably refuse to eat the food. This rule even holds if the woman should be wearing garments of cloth. If a man touches a woman's tail it is said that he wishes to bewitch her, even the husband must not touch it; if this rule is broken it is necessary to kill a goat.

Many of the Ja-Luo affect rather a notable ornamentation of the ear; about 301
fifteen small holes are pierced along the outer edge of the ear and in each hole a 304
ring of brass is inserted, and on the front side the brass is flattened out like a small leaf, to the outside extremity of each ring is attached a blue bead. In the lowest hole in the lobe of the ear a plain brass ring is inserted.

For a long time I thought that these blue beads were ordinary trade beads of 301
the variety known as *kiketi*, but upon inquiry this was indignantly repudiated, and it was explained that these beads were picked up in the fields in the neighbourhood [172]
of the Maragolia Hills after a heavy thunderstorm, and that it was believed that they descended with the rain. Some of the chiefs also wear beads of jasper and chalcedony with a fine circular hole; these beads were formerly of great value and were purchased at the rate of one cow per bead; they were picked up in the same way. Their name for these beads is Nya-Luo, and it is thought by some authorities that these beads have wandered down in ages past from the direction of Egypt; in fact some of the more Northern Nilotic people tell you that they

The Cult of the "MKIA."

L B 291 171

As is well known, the dress of the female sex in Kavirondo is probably the most scanty in the world. Such as it is, perhaps its most distinctive feature is the tail, or "*mkia*," as it is termed by the Swahilis. This is common to both the Nilotic and Bantu races; among the former its name is "*chieno*," and among the latter "*livoya*." The tail is made of fibre, usually obtained from an aloe called "*tuoro*." Among the Nilotic tribes it is stiff, and fairly short, rather like a bottle-brush, from six to eight inches in length. It is usually ornamented at the top by a few small white beads, or half-a-dozen cowries, and is of the natural colour of the fibre. Among the Bantu Kavirondo it is much thinner, and is, moreover, about twelve inches in length, dyed black, and very pliant.

Finding this peculiar attire among two such different races, one cannot help thinking that it was invented by one and copied by the other, and, if anything, I incline to the view that it was introduced by the Ja-Luo, and copied by the Bantu tribes. The Lur people to the west of Lake Albert, who are very closely allied, both in speech and name, to the Ja-Luo, wear it. The Wamia people on the west side of Elgon, who are also of Nilotic extraction, wear a more elaborate and highly developed form, while many of the women belonging to tribes in the Nile Valley wear a kilt of numerous narrow strips of leather, which, one would imagine, might be fined down to the tail behind, and to the little fringe, often worn in front.

L B 291 484 576

There is an interesting ceremonial connected with this article of dress. The "*mkia*" is the special mark of the married woman; if, however, a young girl is going on a visit to another village, she can wear one on her journey, but must take it off directly she reaches her destination, and not don it again till she leaves. This is done as a sort of artificial protective mimicry; by wearing the tail she is taken for a married woman, and is not likely to be molested by anyone she may meet on the way.

L B 291 783

If a woman who has borne a child runs out of her house in a hurry—say, because she has been beaten—and goes into another house without the tail, the house she enters is considered unclean, and the husband has to give a goat, which

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kavirondo FL4

B 291 [783]

is killed on the doorstep of that house, before it is considered to be purified; the meat is divided between the aggressor and the owner of the house.

A woman is not entitled to don the tail immediately after marriage, but has to wait a month or two, the husband then presents her with a goat wherewith to purchase this important part of her trousseau.

Among the Bantu tribes, married women generally wear a small black fringe of fibre in front, but the Ja-Luo married women very rarely wear anything in front, the requirements of decency are, in their opinion, quite fulfilled if they have the tail. Ja-Luo girls, in their villages, are quite nude, but when they go to market, or to a dance, they wear, for ornament, a small fringe of various coloured beads strung on fibre. The Bantu women consider that the Ja-Luo tail is not at all a decent covering, and often jeer at them on this account. The chief Mumia thought that the tail might have originally been imitative of the tail of a cow. The Bantu Kavirondo have a superstition that, if a woman wears cloth round her loins she will not bear children.

B [842]

THE "MIKA" OPERATION UPON GIRLS AMONG THE GUASANGISHU AND NANDI.

Ceremonies attending the Operation on "Nditos" or young Unmarried Girls.

B 881 304

The ceremony among the Guasangishu always take place about the time of the full moon, and is generally performed at sunrise. The proceedings commence the night before by a dance, and the young woman's head is shaved and oiled. At dawn, the old women decorate the young women with their iron necklaces, beads, and other ornaments. The young *elmoran* ("fighting men") of the neighbourhood come along, and the young woman kneels down, while each *elmoran* makes her a speech, and hands her his club and leg bells. The speech is to the effect that she has been brought up among them, fed and protected by them, and has slept with them, and that she is to bear the operation without a sound; if she cries out she will be disgraced among women, and must leave the settlement, but in order that she may not leave them empty-handed, she can take the clubs, etc., given by the *elmoran*, as a symbol that she will not start life empty-handed.

The people then proceed in a cluster to the scene of the operation, while the mother of the girl wails. The girl is then laid out on a skin, and the people stand round in a circle. An old woman sprinkles the *pudenda* with powdered wood ashes, and taking a small curved knife with a blade about 1½ inches long (Fig. 7) excises the *labia* and *clitoris*. Milk is then poured over the wound, and the old women run round, all crying out; this is done to drown any groan or cry she may unavoidably make. The girl stands up, and shakes a bunch of iron leg bells, and she is then wrapped in a skin, and taken away to her hut.

FIG. 7.

During the operation, the girl is held in a reclining position, her head and shoulders resting in the lap of one old woman, while two other women hold each knee. Young and old of both sexes are allowed to be present at the ceremony.

B [413]

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

783 of his village and lives in a hut with an old woman who attends to his wants, cooks for him and also feeds him, because he may not touch food with his hands. Separation lasts for three days, and on the fourth day a man who is himself a murderer, or who has at some time killed a man in battle, takes the murderer to a stream where he washes him all over. He then kills a goat and cooks the meat, takes four sticks and places a piece of meat on each stick and gives the man the meat to eat from each in turn. When the meat has been eaten, he gives him four pieces of porridge made into balls and put on the sticks. After this meal the goat-skin is cut into strips, one strip being put on the neck and one strip round each wrist of the murderer. This ceremony is performed by the two men who are alone at the river, and after it the murderer is free to return home. It is said that, until this ceremony is performed, the ghost cannot take its departure for the place of the dead, but hovers about the murderer.

428 **Inheritance.** It is usual for a son to inherit property. While a man is still in health, he makes known his wishes as to whom he desires to inherit his property, and his wishes will be observed. Should a son be too young to succeed to his father's estate at the time of death, the deceased man's brother manages the property until the son is old enough to take control. Should a man with property die intestate, the members of his clan elect one of his sons to be heir. There is no fixed law as to which son shall inherit. It is not a question of age nor may the son of a particular wife claim precedence over the sons of other wives, but the clan-members are at liberty to choose the man they consider the most suited for the office. Women never inherit or hold property. The father's stool and bracelet are given to the heir and are the insignia of lawful succession.

[562 421]

Marriage, Birth and Puberty.

582 **Marriage customs.** It was impossible to discover the ritual of marriage or the groups into which a man might or might not marry, all that could with certainty be learned being that there are exogamous divisions within the tribe.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

The warriors are armed with long-bladed spears and use large shields three feet high and of a V shape, behind which the bearer crouches and is completely hidden. The shields are made of cow-hide and are so dried that they are hard enough to resist a spear-thrust. Each warrior is painted with red and white clay in fantastic designs and wears a head-dress. Some of the head-dresses are like helmets adorned with ostrich feathers, while others are small straw hats such as a child's doll might wear.

The battle is decided when the cattle are carried off by the one party or when the other party prove themselves strong enough to retain them. The victors dictate terms of peace and the vanquished pay a fine in cattle and women.

Treatment of a warrior who has slain one of the enemy. When a warrior kills another in battle, he is isolated from his village, lives in a separate hut some four days, and an old woman cooks his food and feeds him like a child because he is forbidden to touch any food. On the fifth day he is escorted to the river by another man who washes him, a white goat is killed and cooked by the attendant, who feeds the man with the meat, the goat-skin is cut into strips and put upon the man's wrists and round his head, and he returns to his temporary home for the night. The next day he is again taken to the river and washed, and a white fowl is presented him. He kills it and it is cooked for him, and he is again fed with the meat. He is then pronounced to be clean and may return to his home. It sometimes happens that a warrior spears another man in battle and the latter dies from the wound some time after. When death takes place, the relatives go to the warrior and tell him of the death, and he is separated at once from the community until the ceremonies above described have been performed. The people say that the ceremonies are necessary in order to release the ghost of the dead man, which is bound to the warrior who slew him and is only released on the fulfilment of the ceremonies. Should a warrior refuse to fulfil the ceremonies, the ghost will ask, "Why don't you fulfil the ceremonies and let me go?" Should the man still refuse to comply, the ghost will take him by the throat and strangle him.

775
783 It seems that normally it is only kinsmen who haunt a man, but any man who kills another, whether he be related to him or not, is in danger of ghostly vengeance. For this reason a Luo does not care to spear an adulterer found with his wife. Also, as Roscoe says, a man who slays another in war may be injured by his ghost if certain rites are not performed. These purificatory rites, called *gut*, are conducted by a man, called *jagut*, who has himself killed a man and been through the ceremony. The slayer comes back from the fight to his homestead with a crowd of his companions, who make a demonstration there, singing and pulling out the eaves of his mother's hut. His father and mother strip themselves and cover their bodies with ashes. The slayer remains outside the homestead and there the *jagut* pierces the beak of a fowl and hangs it round his neck. He then cuts the beak of the fowl and it is killed when it falls. The slayer may now enter the homestead, but not through the gateway. A special entrance is cut for him through the euphorbia hedge which encircles the homestead.

[p.87a]

775 He goes straight to the hut of the *pim*, the old woman
783 of the home, and there a goat is thumped and kicked to death. Afterwards it is skinned and cut open. The heart is extracted and bits of it are put by the *jagut* to the lips of the slayer and of some of his companions. He cuts strips from the skin of the goat and lays them along the backs of the slayer's fingers. He also gives the slayer medicines, among them a wild pig's tusk, which the slayer wears round his neck. The man is now purified and may drink milk again. [114] Roscoe's account is very different from that given to me by Luo, which I have recounted above.

775 Clearly there is much more to be discovered about Luo beliefs about ghosts than what I have recorded, but I can only add to my account that the word *jociendi* is sometimes used for ghosts in general—and not with special reference to troublesome ghosts—and that some ghosts appear to be thought to become nature spirits dwelling in water and in the air, and others to occupy the gourds used by diviners and to answer questions the diviners put to them.

[p. 87b]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

goals which have been carefully weighed and assessed as to the possible supernatural and social consequences. The Joluo believe that a goal does not justify the means if the means require violence, unless all methods of arbitration, conciliation, appeal to authority, both temporal and supernatural, have been tried and proved to be unsuccessful or inadequate.

Violence requires cleansing—physical and spiritual cleansing of the most exacting nature—to avoid the supernatural consequences (*chira*) which violence may bring in its wake. One case has been recorded which contains an excellent description of the ceremonial and ritual cleansing thought to be essential after a murder. This particular murder was planned and executed by a group which, after years of thought and effort to resolve the conflict without violence, finally resorted to murder. Obviously, with the coming of the European, other factors were involved to escape detection for an act which in the old days would have given the group high status within its own community and which would have created feuds or precipitated a war that ultimately would have been resolved by blood compensation or schism of the political unit and migration by the weakest group.

Violence which arises immediately and unpremeditatively from quarrels, drinking, infidelity, sex, marital tensions, or family differences, and which results in a death, is not regarded in the same way as predetermined action decided upon as a last resort. Ceremonial cleansing is still necessary but does not take the extreme form because these acts are regarded by the Luo as bringing consequences which affect the individual only, that is *kuer*, and not *chira*, which affects the group, clan, or tribe as a whole. Fortunately British law makes a similar distinction: that between murder and manslaughter. It will be found therefore that the majority of cases involving Joluo which have come before the courts of Kenya as murder cases are resolved and punished as cases of manslaughter. The Joluo do not, however, understand why many of those convicted un-

der the head of manslaughter should be punished at all. They feel that a person who makes the mistake of killing in anger is or has been or will eventually be punished by the ancestors, God, the elements, by illness, bad luck, misfortune, or the like, in the inevitable nature of things.

It is believed that cold-blooded, premeditated murder brings *chira* to the group and is therefore punished by the tribe or by the segment affected. The group or the individual who took what they regarded as this calculated risk was eventually banished from the tribe or if large and strong enough to dominate the political unit to which the deceased belonged could force his supporters, usually his segment of the clan, to break away and leave the area. Luo kinship describes all members of the clan in the same genealogical generation as brothers; fratricide, therefore, has a very wide range.

Luo clans occupy and are identified with a geographical area. The clan and the area it occupies are usually called after the eponym of the tribe. Those living within a clan or tribal area who are not members of the clan or tribe are regarded as squatters (*jodak*) with limited rights. They may be unrelated squatters, but most often are found to be affines of legitimate clan members. Murder committed by such persons invokes immediate counteraction on the part of those who belong to the land by virtue of descent, *jogweng*. Cattle could be taken by force, the culprit banished or killed, and/or a woman from that group married by a member of the dead man's minimal lineage, his *jokakwaro*, to raise seed unto the dead man's name. This woman would be regarded as the wife of the dead man, her children would placate his ghost as father (*wuoro*), the physical father would merely serve as genitor.

One major clan, *Kakia*, of a powerful tribe, the Seme of Central Nyanza, descended from a woman of this type—but then not exactly of this type: what happened was as follows. A *jadak*, living in the clan area of Seme, killed the son of an important elder of the tribe. He fled to his own tribal land to

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

761 which is the infidelity of the spouse of the deceased; in the case of a child, by the adultery of its mother. Ritual cleansing of the members of the minor lineage is therefore necessary, as for *kwer*.

I mentioned above a classical case of homicide which illustrates what the Joluo regard as a calculated risk of the consequences. It deserves fuller analysis.

Case No. 1.

This case involved a group of nine related men. Only one of them was convicted, and he eventually was acquitted on appeal through lack of corroborative evidence.

A quarrel began between members of two major clans of the same tribe over the appointment of an assistant chief. The clan from which the assistant chief was appointed—we shall call it Jokoth—is alleged to have taken advantage of the clan—which we shall call Jokech—which was unsuccessful. The clans feuded in every way, over land, cattle grazing and so on, until the elders of Jokech decided, as a warning in the ancestral way, that they should burn the hut of a leading elder of Jokoth. This was done. The assistant chief arrested a member of clan Jokech, a person with whom he is alleged to have had a personal grievance, and this man was convicted of the burning and sentenced to a term of imprisonment. His sons fought hard and long to have him released on grounds of ill health and, when finally successful, took him home only to have him die shortly after. On his death bed, he made his sons swear to avenge his death.

Diviners and medicine men were consulted, and many methods were tried unsuccessfully for several years to bring clan Jokoth to its knees and to bring about the death of the assistant chief who had by now retired.

All was not well with the affairs of Jokech clan. Each new catastrophe was taken as evidence of the malevolence of the ghost of the deceased because his death remained unavenged.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

Finally, in desperation, his sons and a group of his *jokakwaro* consulted the head diviner, *jabilo*, to choose an auspicious day for the killing of the ex-chief and to collect the animals and materials necessary for cleansing after the deed had been accomplished.

The ex-chief was found and stabbed to death at the place named by the *jabilo* and his body was hidden in a nearby river. It was found several days later, and a witness was found who alleged that he came upon the group on the day of the murder in the act of disposing of the body.

Those who had had actual physical contact with the blood of the murdered man were cleansed as soon as they arrived home by the leading *jabilo* of the clan. He used a grey ash from burning the sacred *buombwe* vine. The minimal lineage, *jokakwaro*, assembled at the village of the senior son, who was the head of the lineage segment, and who had struck the fatal blow. There the following cleansing ritual was performed: at about two o'clock the following afternoon, a black sheep and red chicken were slaughtered by the head of the lineage. The sheep and chicken were first prepared by the *jabilo*, who placed his medicines in the mouth of the sheep and of the chicken before the sacrifice. The *jabilo* cut strips of skin from the animal and wrapped them around the spear and knives used in the murder. The spear had to be destroyed at sundown because the victim was related to the spear clan of the tribe. The meat was divided on the lineage principle and consumed ceremonially. The meat of the chicken was eaten only by those who actually struck blows.

The purpose of these sacrifices was stated by the *jabilo* to "keep the spirit of the murdered man from doing evil to the clan." It also cleansed the bodies of those who drew blood so that they could now eat with their families and once more participate in the activities of the village and clan.

After the meat was eaten, those present held a meeting to decide which old woman should act as a wife to the ghost of

Homicide and Suicide among the Joluo of Kenya

SUICIDE AMONG JOLUO

We have discussed the Luo attitude toward death at some length in our description of homicide. These attitudes apply equally to suicide, except that they are extended to an association of the idea of death and its concomitant link with the supernatural to self-destruction, as an assurance or determination on the part of the individual to hasten the day when supernatural forces can be made to bear on the frustrations which led up to the act of suicide. The motives for suicide are thought to be to avenge the deed by the malevolent supernatural forces which at death become allied to the dead, who are able to use them against those on earth to solve problems which they found beyond human solution.

Throughout childhood there is constant reference to suicide, and in adolescence, early marriage, and old age the threat of suicide is an effective technique used by the Joluo to achieve goals or to avoid distasteful consequences. Threats are not often put into practice because they are used only when their effectiveness is relatively assured.

Unfortunately for the student, suicides are not usually reported to the authorities, although legally they should be. Therefore, few cases are recorded as in advanced countries in the coroner's court. The Joluo believe that suicide brings *chira* to a large segment of the clan of the suicide, and it is therefore kept as quiet as possible and dealt with immediately by the clan elders and clan medicine men, *jobilo*. The family of the suicide are forced to perform cleansing rituals and ceremonies before they may again participate in the social life of the clan. Data are for these reasons hard to collect. The few cases which were brought to the attention of the authorities were only those suspected of having been cases of murder which were made to look like suicide.

During a two-year tour among the Joluo tribes of Central Nyanza, I was able to collect 220 cases from informants. Of

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

was regarded as a juvenile. The homestead was supervised by the levir of his father's second wife. The young man desperately wanted to marry. His stepmother, however, had spread the rumor that he had had syphilis. Therefore none of the eligible girls would have him. He went to a medical dispensary off and on for several months but treatment was not successful.

While he was away, a half brother, the son of the senior living wife of the village, married without his knowledge. The young man obviously had been under intense emotional strain caused by the rumors and gossip associated with the fact that he had a venereal disease. He was the senior son by Luo customary law and on marriage would be the head of the village. His half brother had taken a wife. This added to the humiliation and shame and would bring ridicule upon him whenever he met with his contemporaries for the rest of his life. This was too much. He went to the *thim*, the no man's land surrounding his clan grazing area and the place where the ancestors are normally placated, and there hanged himself from a tree.

His brothers and relatives were concerned about his absence and suspected what he had done. He was found by one of them after many days and his family and minimal lineage group completely destroyed the tree, including the roots, and there on the spot buried him and performed his funeral rites. The family was cleansed by the *jabilo* and the ancestors placated to receive his spirit by the sacrifice of a white cockerel and a black sheep.

The first son to be born to his brother's marriage was named after him to placate his spirit and to continue his name in the lineage genealogies.

Naming a child for a relative who had died is used by the Joluo in many ways, but only after consultation with the *jabilo*. It is obvious therefore that any misfortune which occurred to the family or to the lineage segment after this suicide was attributed to it. The fact that the first child born after the suicide

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 553 was given his name reveals their attempt to avoid the consequences of his act.

762 159 684 The second case arises from a breach of customary law which in the old days would have meant banishment but which today brings social ostracism.

[178]

Suicide Case No. 2.

The suicide was caught in the act of intercourse with his full brother's wife. The Luo believe that such an act involving members of the same *Jokamio* (that is, those descended from the same mother or grandmother) brings *chira* to the whole clan. The security and solidarity of family relationships are [578] threatened by the act because it involves quarrels which may lead to violence within the primary segment of the clan. In this case the brother did not tell the elders of the clan but merely threatened to do so. The guilty man returned to his own homestead and hanged himself in his hut. The house was destroyed [783] and members of the extended family were cleansed by the *jabilo*. The cleansing ceremony took the same form as in the first case, with the addition that the village was sprinkled with medicine in order that it might continue to be used by the dead man's family.

In the next case there are two clear motives which led to the suicide. The first, perhaps the most important, lies in indigenous beliefs and attitudes, while the second lies in more modern attitudes.

Suicide Case No. 3.

159 762 556 [661] This Luo was about 30 years old and had been employed as a driver for the Government for many years. Drivers in Kenya receive a relatively high salary, and in addition some take advantage of their position and make extra money by illegally charging people for transportation. Through these activities, he became a relatively rich man and was able to marry a total of five wives at his comparatively young age. He was also wealthy

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

from the fear of consequences arising from the behavior of her son and, in two cases, there was a suspicion that the women did not in fact commit suicide, but were murdered by their husbands in such a way that it looked as if they had committed suicide. 762

Suicide Case No. 11.

A young woman was accused by her husband at a beer party of having slipped quietly out for intercourse with a man from the village. To prove that she was innocent, she hanged herself on a tree which was near the homestead. If she had been guilty, the Joluo argue, "she could have been cleansed, but she could not be cleansed for having done nothing." 762 159 684 783

Suicide Case No. 12.

A young wife, newly married, had offended her husband in some way and he refused to eat her food. (This is a customary curse and is a very severe punishment to a wife.) She threatened to kill herself if he did not eat it. He then took the food to the senior wife, who ate it, adding insult to the injury already done. The young wife went to her hut where she stood on her grinding stone and hanged herself from the roof. 762 159 578

The elders were quick to point out in this instance that since her death the village had been abandoned and many children of the lineage had died. All this, they believe, was caused by the ghost of the abused wife. 762 159

The third case involved a young girl who committed suicide because she did not wish to marry the person chosen for her by her parents. 762 159 584

Suicide Case No. 13.

A very young girl, little more than a child, objected in the traditional way to the union which her parents had arranged.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 his mother and took the *sim-sim* by stealth. When the husband came to collect it for the Chief, he found that a large portion of it had disappeared. This caused a bitter quarrel between him and the boy's mother.

159
[595]

In fear of the consequences of what her son had done, the woman placed a rope, which was used for tying up one of her cows for milking, in a small basket and went out of the village as if to collect vegetables. She went to one of the largest trees in a nearby valley which was hidden from sight by thick bush and there hanged herself. My informant then described the scene as follows: "The first person who found the body caned it very hard and, after having cut the rope, started mourning. The place was soon filled with people and some were asked to bring hoes, axes, and *pangas* to destroy the tree. There and then people of the village and her lineage started their work and within a day the tree was completely destroyed and all the roots dug up from the ground and burned."

● [783]

"When I asked why the tree was being destroyed," the informant went on, "the elders told me that it was being done to stop more people from hanging from it, for we Luo believe that hanging is inherited by different people in different clans. If a clan had not had a person hang himself before, it is difficult for one in that clan to hang himself or herself. If a tree on which someone had hanged himself was allowed to remain, it would drag other people to it for the same purpose."

[824]

The next case involves a curse as well as domestic trouble.

Suicide Case No. 17.

159
762
578

The husband of this suicide had been having considerable trouble with his cattle and many were dying from disease. The beginning of the illness coincided with the elopement of her daughter with a young man who had neither paid bride-wealth nor seemed likely to pay it. Her husband blamed his misfortunes on this incident and his suspicions were confirmed by

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

while relations of a personal kind and kinship links between individuals run across their common frontiers and are compelled to do so by the exogamous rules obtaining in Luo society.

Several of the clans and maximal lineages possess sacred spears and other objects believed to have belonged to their founders. The best known sacred spear (*tong ma lisua*, spear of sacrifice) is the *tong* Alego, the spear of Alego, the founder of the JoAlego clan. In Ugenya the JokaGer clan have several such spears and there are others in possession of the lineages descended from Cuanya to the south of the gulf. Where there are important stranger lineages in a tribe they may also have their sacred objects, e.g. in Alego the KaLuo and the JokOgelo have sacred spears and the JoAgoro have a sacred stone and a sacred pot handed down from their founders. These objects are symbols of the unity of a clan or lineage and, by extension, of the tribe or tribal segment in which it is dominant, and they were used ritually in time of war or of common calamity, such as drought and invasion by locusts. They seem generally, if not always to be held by the senior line (*dho ot ma duong*) of a lineage or clan and are kept either in a granary or in hiding in the bush. The senior line is often called on by junior collateral lines to perform important sacrifices for them and the senior lineage ought to provide the sacrificial beast at ceremonies common to all the lineages. I was told also that while each lineage had its *won gweng*, 'father of the land' the *won gweng* of the senior lineage had chief prestige among them.

Some clans and lineages have certain ritual prohibitions (*kwer*), mostly on certain foods, particularly kidneys and liver. The Luo do not give the impression of attaching much importance to them and if a man and a woman observe the same taboo it is not in itself a bar to marriage. Reference must also be made to clan and lineage honorific, or praise, names. The *nying paak* is generally derived from the name of a paternal ancestor whose name is a lineage cognomen, e.g. Okwiri (see the chart of the JoOwila clan) can be called, according to the circumstances, *wud* (son of) KoOkelo, *wud* KaJeje, and *wud* Owila. These names are much used at communal gatherings, expecially at large beer parties.

A feature of clanship which would seem to be of some importance is the annual inter-lineage wrestling. Unfortunately, I only became aware of these shortly before I left Luoland and had afterwards no further opportunity to enquire further into the custom, or to discover whether it is practised all over Luoland or only in some tribal areas, such as U-yoma where the closely related collateral lineages wrestle for practice prior to the wrestling matches between the big lineages. Thus the Ko-Okwiri are matched against the KoObong, then these two lineages together against the KaAtuenga and KaAbudha, and so on. The lineages send a messenger to challenge the other party and when they meet an elder presides over the joint bouts and the exhibition matches between famous wrestlers on each side. The matches are said to occasion much excitement among the spectators.

The sketch given above of the Luo clan is only an outline delineating feature of it. A little detail is filled in here and there in the following

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

originally came from the north-west. I imagine that the original possessors of these beads had considerable settlements in the neighbourhood of the Maragolia Hills, and that beads were continually being lost in the fields, and now when a heavy thunderstorm comes it washes some of the surface soil away and exposes an odd bead now and again. The supply of the blue Nya-Luo beads is of course quite inadequate for the population, and many make up for the scarcity with the ordinary blue *kĭketi* bead.[1] Occasionally these ancient beads are green and yellow, but the usual colour is blue.

The Ja-Luo have a curious habit of shaving curved patterns on their heads (Fig. 11).

FIG. 11.—VIEW OF THE TOP OF A MAN'S HEAD; SHOWING HOW THE PATTERN IS SHAVED.

The young men often wear an armlet of cylindrical wooden blocks on the upper arm; the wooden blocks are coloured red with oxide of iron. A band similarly ornamented with wooden blocks is often worn round the forehead. Some of the older men wear the curved canine tooth of a hippo on the forehead. The tooth is ground down laterally till it is only about one-eighth of an inch in thickness; others wear the tooth of a wart hog attached to a necklace.

The Ja-Luo have a curious habit of standing on the top of an ant hill or in some prominent place on one leg with the flat of the other foot resting against the knee, reminding one of the attitude adopted by a stork; they will remain in this attitude quite comfortably for a considerable time. This habit is I believe characteristic of the Dinka and others of the tribes on the Nile south of Fashoda.

Miscellaneous customs.—If a person shuts the door behind him when he leaves a house, people at once say he is a witch doctor. If a wife does this to her husband, the husband will not enter her house again until she fetches a goat from her father and kills it. Similarly if a man is the culprit he has to kill a goat to avert the ill luck. If a house is struck by lightning and anybody is killed inside, the head of the village walks three times round the house with a red rooster and the house is then broken up and the wood utilized for any purpose.

Witchcraft, etc.—It is believed that people are killed by witchcraft; the person possessing the medicine has only to show it to a person in order to kill him; to save the person bewitched it is necessary to catch the wizard and to bring him to the patient and he can remove the spell, and the wizard has to pay a fine; this class of medicine man does not hide himself. There is a deeper kind of witchcraft which is only practised at night and with great secrecy. It is called Jamkingo; among the Gemi tribe many of the clan previously referred to who forge iron possess these powers.

[1] With the kind assistance of Mr. C. H. Read, of the British Museum, I examined the collections of beads at the Museum from various parts of the world, and I found yellow and blue beads of the exact colour and shape among the Egyptian antiquities and jasper beads identical in appearance to the Nya-Luo both from ancient Egypt, and also from excavations made on the site of some buried cities in Beluchistan.

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kavirondo FL4
Nandi FL13

Among the Bantu people each clan appears to have its own particular totem, and this may have given rise to their custom of exogamy, but in Nandi each individual is said to have his own totem irrespective of the clan. Practically the whole of the Nilotic group appear to have the same totems, but, in some parts, there are certain variations from what may be called the standard list of forbidden foods. Thus, although the exogamy which exists among the Nilotic Kavirondo may have originally arisen from totemism, the present survival of the belief has lost its original character.

In all the groups the totems appear to be animals, no example of a vegetable totem has been discovered.

The Bantu group use the word "*Musiro*" to denote the totem and, contrary to the usual belief, the eating of a totem animal is not thought to be followed by death, but only by a severe skin eruption; and if, by any mischance, the meat of the totem is eaten, the evil consequences referred to can be averted by making a medicine "*daca*," extracted from certain herbs, and this extract is mixed with the fat of a black ox and rubbed all over the body of the patient.

Among the Nilotic Ja Luo the totems are called "*Kwero*," and there is a long list of "*Kwero*" animals which are forbidden as food to both men and women; there is, however, an additional list of food that women must not touch.

Upon no occasion is the rule of the *Kwero* relaxed, but, curiously, the animals on this "*index expurgatorius*" are considered malignant in their influence, and it is thought praiseworthy to kill them. Thus any "*Kwero*" animal can be hunted, with the exception of the crested crane (*Belearica gibbericeps*), which is, generally speaking, strictly preserved by all the Kavirondo. The Gemi tribe, however, do not consider it wrong to kill and also eat this beautiful bird. The Gemi, Lego, and Sakwa tribes can also eat the wild cat, called by them "*Oywang.*" The Ja-Luo often wear the teeth of the leopard and crocodile as ornaments, and the skin of the leopard and wild cat; this is not considered an infringement of the "*Kwero*" law.

Examples of the Totems of the Bantu Family.

Clan or Tribe.	Special Totems.
Kisesi clan of Awa Wanga	*Imbongo*, bushbuck.
Marama and part of Tsoso and Isukha...	*Kuru*, waterbuck or *Ikulu*.
Awa-Genya and Awa-Mrashi	*Liusi*, pigeon.
Awa Shekwi of Nyole	*Njofu*, elephant.
In Ketosh there are several, according to to the clan, but over a large portion the special totem is	*Makuyi*, a large black and white stork which appears in large flocks about November, it eats locusts.
Tasoni tribe (Ngaki section)	*Iswuu*, reed buck.
Ithako, E. Tsoso, S. Kabras	*Iwlongo* or *Ngawe*.
Probably the totem most common in Kabras is	*Mbinkalo*, white ants in the flying stage (but cooked). They can be eaten raw, but not when cooked.

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
Bantu Kavirondo FL4

The Isira Custom.

L B 628

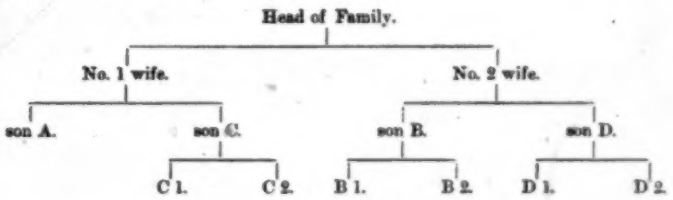
In Sir Harry Johnston's recent work on the Uganda Protectorate, reference has been made to the presence of a vendetta custom among the Kavirondo, in which, if a man is killed, the sons of the deceased endeavour to hunt down the murderer, and if they fail, the sons again carry on the feud.

This custom doubtless accounted for much petty bloodshed in times past. I am glad to say, however, that it is dying out now to a great extent, and one murder no longer leads to a succession of crimes.

L B 628 784

The old blood feuds are, however, still recognised, and a man may not eat with a person with whom his branch of the family has a blood feud, or, it is believed, he will surely die within 24 hours.

To make it clear how this curse operates, I append an example in which a man kills his brother by a different mother.



The feud commences by A killing B. After this D will not, nor dare, eat with A or C. In the next generation B 1, B 2 and D 1, D 2 cannot eat with A or C, neither can they eat with C 1 and C 2, although they are only nephews of the murderer, but they belong to that branch of the family through their common mother.

Curiously enough, although this custom is hinged on the female line, it only applies to the males of the family; the females can eat with the descendants of the tainted line without evil effects.

The men are desperately afraid of unconsciously infringing the *tabu*; if a member of a murderer branch has cooked his food in a certain pot, that pot is defiled for any representative of the other branch; thus when a number of men are travelling together and the cooking pots are few, the situation becomes rather difficult at times and numerous disputes arise. Everything connected with this custom is called "*Isira*" by the Bantu Kavirondo.

The custom has been adopted in a half-hearted manner by the Nilotic Ja-Luo, but it is not carried out in such a persistent manner, and rarely goes so far as the defilement of the cooking utensils above described.

B 628

Among the Bantu people of the Kakumega Tiriki, this *Isira* custom is often indirectly taken advantage of in rather a cunning way as a means of obtaining revenge for their private grievances. Suppose a member of a certain clan has

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

near the entrance to the village, so that they can watch over any attempt to steal cattle. The hut which is directly opposite the gate of the village is usually that of the principal wife of the village head-man. There is much the same superstition as among the Bantu Kavirondo about shutting the door of a house behind a person who has just left it.

Unmarried men go naked. Married men who have children wear a

4nd. HUSBAND AND WIFE, 14-4.11

small piece of goat skin, which, though quite inadequate for purposes of decency, is, nevertheless, a very important thing in etiquette; for a married man with a child must on no account call on his mother-in-law without wearing this piece of goat skin. To call on her in a state of absolute nudity would be regarded as a serious insult, only to be atoned for by the payment of goats. Even if under the new dispensation a man

originate all the larger lineages which provide the political framework of Luo society.

My illustrations of Luo lineage structure are taken from material on one large lineage group, that of Karachuonyo. This group inhabits the present locations of Karachuonyo and Kasipul, and in 1947 had a population of 90,000. I lived here from December 1946 till March 1947 and again for the month of September 1947. On each occasion I took with me a Luo student from Makerere College as interpreter and research assistant. I went through my material with a dozen or more of the Luo students at Makerere who themselves came from a number of different locations. Clearly, from such a short period in the field, my results are not complete, but in so far as they add to the information at present available, I present them for what they are worth. The map (Fig. 3) shows all the Luo locations of South Kavirondo, those of the Karachuonyo group and of the other lineages which claim descent from the common ancestors, Jook and his wife Awando, being shown in heavy type.

III. THE FAMILY

The most prominent cultural features of the Luo landscape are the euphorbia hedges, at stages of growth varying from that of 3-foot saplings to that of 30-foot trees, dating each site by their planting at the time of first occupation, and throwing a thick green wall round the cluster of huts within. This residential unit is the *dala* or *pacho*, and will be referred to as the homestead. The dwelling-huts ranged in a circle round the inside of the hedge are those of married women, the chief wife's hut being at the side opposite to the entrance through the hedge, and the huts of subsequent wives arranged in alternate succession on either side of that of the chief wife.[1] The husband and head of the homestead divides his time between the huts of his wives, the chief wife's hut taking precedence,[2] having no other quarters of his own except an *ebila*, a smaller hut usually in the centre of the circle, which was his only place of privacy. There is a belief that if the husband leaves the homestead to escape from the bickering of his wives he will die on re-entering it, and the *ebila* provides him with a safer sanctuary. It was also a vantage point from which he could keep a watchful eye on his cattle in the nearby kraal. The homestead is the spatial correlate of the compound polygynous family and is subdivided into the households of its component elementary families. Just as *dala* or *pacho* applies both figuratively to the social group and concretely to the homestead occupied by it, so *ot* applies both to house and to the household of wife and children occupying it. The title of the head of the homestead and its family group is *nyaka dala* or *nyaka pacho*; *jodong'* (elder) may be substituted for *nyaka*. Correspondingly, each wife is *nyaka ot*, signifying that she is head of the household, proprietress of its hut and all other effects, and leader of its domestic and economic activities. The word *nyaka* is usually translated as 'father', and is in fact the classificatory term for all agnates of the generation senior to the speaker, including the 'genitor'. But its use with reference to all married women,

[1] See Gluckman in *African Systems of Kinship and Marriage*, ed. Radcliffe-Brown and Forde. The Luo family has a "house-property complex" of the Zulu type but in a less extreme form.

[2] This is often striking in detail. The husband's most valuable possessions are also kept there. With the present changes in hut design the chief wife's hut is often of the new and more pretentious rectangular pattern, while a second wife's may also be rectangular but smaller, and the third wife's still of the traditional circular type.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

853 when a mother is eating she will hear her child cry out [854] for some of her food.

From six to nine months, gruel continues to be the staple article of diet. In certain strict families adult food is not given until the child is over a year old. Babies fed on cow's milk begin using adult food during the first or second month.

Restrictions on the suckling of babies. It is considered a [784] breach of taboo for a nursing mother to suckle her [761] neighbour's child. This restriction is based on the fear that some woman with poor milk may, in suckling a [177] baby, kill it. One of my informants pointed out that in the early days of missionary work an attempt to break this taboo had failed. She said that many of the children thus suckled had died, and the attempt had been abandoned. One exception to the restriction, however, is [603] that of a mother-in-law. In cases of necessity she is permitted to suckle her daughter-in-law's child because it is assumed that her milk has stood the test.

853 595 In rare instances there seems to be different treatment of male and female children in a polygamous home with regard to suckling. Some of my informants stated that inter-suckling is permitted if all the nursing mothers have female babies.

[587] Nevertheless, the taboo against inter-suckling of male babies is reinforced by the fact that it is possible for a son to marry one of his father's younger wives. Hence a woman refuses to suckle a child who might become her husband on the death of the father.

853 [177] The social restriction with regard to the suckling of infants is still observed with rigidity, and there are no evidences of a change even under the impact of modern ideas.

Methods of feeding. No force is used in feeding young babies. A little gruel in a small container is put to the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

843 Dietary restriction may also be a matter of family
262 habit or taboo. Thus a mother may inform her children
while they are young that a certain kind of food is not to
[753] be eaten by members of their family. This restriction
may result from a fear of spreading certain diseases,
generally skin ailments, latent in that particular family
group. The restriction does not apply to others who are
free from the supposed disease. When a woman gives
birth to a baby her habits in these respects do not
change.

[756] A dietary restriction may also result from the instruc-
tion of a medicine man, as in the case of a woman who
has had no child for a long time. During his treatment
[784] the medicine man gives instruction on taboos and com-
pulsory dietary restrictions. Dislike of a certain food
during pregnancy may also result from personal dis-
agreeable experience. This is also generally assigned to
the will of the child. Restraints of a family origin, as well
as those imposed by the medicine man and acquired
from personal experience, are more strictly adhered to
than the traditional restrictions.

843 *Medicinal restrictions.* The list of medicines that expec-
278 tant mothers may not take is a small one. Apart from
177 the traditional strong purgatives and medicines for kill-
ing worms, modern drugs like quinine and strong Euro-
pean laxatives are eliminated, such measures being
designed to prevent abortion or premature birth.

843 *Social relationship.* Superstitions affecting expectant
[177] mothers have very largely yielded to the influence of
Christianity, but we find remnants of old regulations,
[516] such as those connected with sitting, still observed by
women. An expectant mother is required to sit with a
straight back. Neither should she put one of her legs on
top of another, because it is believed that the expected
child in assuming a similar position would be difficult to

795 Lastly, my followers must immediately slaughter all their cattle, sheep, and goats. When this is done, I will provide them with as many more as they want from the Lake." Having said this, the snake disappeared into the lake.

Onyango soon set about spreading his gospel and, as was natural with so attractive a programme, it was not long before he had a considerable following. They were divided into what may be described as two Degrees. The First Degree consisted of those personally "called" in very much the same way as Onyango had been "called." They [786] were all men, mostly older men and the heads of Bomas. The "call" consisted in their throwing some kind of fit, possibly an ecstacy of religious exaltation, during which words poured from them in an unintelligible torrent. They became the priests and were in tremendous [791] demand as witch-doctors since they soon were invested with, or themselves assumed supernatural powers.

761 For example, they were reputed to be able to recall to life a dying
795 person or one who had just died. The procedure here began with the priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called "Buombwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially "Called" by Mumbo himself, and also any other people who, although not specifically "Called," chose to join the cult.

795 At sunrise and at sunset all Mumboites stand facing the sun with
788 the first finger and thumb of each hand meeting to form a circle and held up to the eyes like binoculars. Having gazed at the sun intensely
782 until they are completely dazzled, they stretch out their arms towards it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 As was to be expected from a retrogressive religion which not only
782 encouraged but ordained idleness and uncleanliness, it was not long before its adherents, having nothing to do or to think about, began to
839 indulge in unpleasant practices which the normal Jaluo, however uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

smears a little clay in front of both ears of all the people who come to the feast, and each of them do the same to the mother in return. All of them decorate their necks and waist with *bwombwe*, a creeping plant; then they start a most immodest dance; scarcely covered with their goatskins they simulate the copula, and the vilest songs, which no decent person could ever listen to. After the dance they enter the kraal where food is ready. Then they have the beer. The relations of the woman stay over for the night, but all the others go home.

Mirnd Kumu is a similar dance, which is indulged in, when a woman has given birth to a child, of whose conception she did not get aware of for some considerable time. The people who come to this dance are far fewer; it does not last as long either. In stead of a bull only a goat is killed by the relations of the woman, and some beer is brewn for the feast. Other ceremonies are the same as after childbirth under usual circumstances.

Betrothal and Marriage.

Before any other arrangements are made, a boy intending to get married tells his parents that he wants to look out for a partner through life. If the father has any cattle towards the dowry he will agree, and tells his son to make his choice, and inform her relations. When he has found a likely girl he invites a couple of friends, one of whom at least knows the relations of the girl well *(jatielo)*. With his friends he pays a visit to the kraal of the girl, and enters the *simba* i. e. the hut in which the boys of the kraal live.

No sooner have they entered the *simba* or the girls of the place go to greet the visitors, after which they bring them pipes and tobacco and go to fetch or prepare some gruel for them to drink. In the meantime the *jatielo* goes to the hut of the paricular girl's father to tell him that a friend of his has come for his daughter. The father will inquire from the *jatielo* what kind of lad the boy is, whether he is of good family, whether he is not the son of a witchdoctor, whether he can pay a decent dowry, ect.

If the father agrees the *jatielo* goes back to his friends in the *simba* and reports that the father is willing, whereupon the boy proposes to the girl. There and then the girl decides whether she agrees or not. If she does not want the boy, then all is finished and visitors go home at once. If she agrees, they stay for the night. They sleep in the *simba* seperately together with the other boys and girls.

Then, in former years, in the early morning the visitors would catch the girl after she had left the *simba*, and take her to her fiance's village *(mako)*. On account of a government regulation, by which the dowry is now more or less fixed, this practice is no longer adhered to.

The boy and his friends go home. He informs his parents, who next day send the *jatielo* back with somebody else to pay the first instalment of the dowry, usually 2 or 3 head of cattle. They stay over the night, and in the morning they catch *(mako)* the girl, for she pretends not to like going along. After they have had some gruel to drink, the boys who brought the cattle more or less drag her out of the kraal. The girls from her village strip her absolutely naked, and the boys from there follow those who fetch the girl to take from them some of their orna-

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Ordeals.—They have a form of ordeal called Kiviri; a small pot of water is taken and a little *wimbi* flour and a bit of the medicine are put into the water; if the mixture boils over the man is guilty, and *vice versâ*. 695

Another ordeal is as follows: a piece of calabash open at both ends is placed on a stone in a bowl of water (Fig. 12). Water is ladled up from the bowl and poured into the calabash, and normally it immediately runs out where the calabash rests on the stone; the medicine man however puts some medicine into the water, and if the man is guilty the water no longer runs out at the bottom of the calabash, and eventually the water runs over the top. I have seen this performed and found that it was the medicine that enabled the calabash to be filled; this medicine was the crushed up leaves of a kind of mimosa, and being of a fibrous nature it stopped up the points of leakage between the calabash and the stone. There is another trial by ordeal: some dry flour is given to the suspected person, if innocent he can swallow it, and *vice versâ*.

FIG. 12.—THE ORDEAL OF THE CALABASH, OFTEN USED FOR THE DETECTION OF THIEVES, ETC.

Omens.—If the omen bird cries out on the left side of the road it is bad if the journey is for war, but if the journey is a mere visit the person will get food. If the bird cries out on the right side it is good for war but bad for visiting. If a cat crosses the road from right to left it is a good omen, if *vice versâ* it is bad. If you see a rat on the road and it runs in front of you it is a good, but if it crosses the road it is an inauspicious sign. 787

In some clans it is lucky for the first child to be female and in others it is *vice versâ*. [177]

If on a journey a man strikes his little toe on either foot it is a very bad sign, if he strikes the big toe it is propitious. If a man whose eldest child is a boy is travelling and the first person he meets is a man it is a good sign, but if a woman it is bad, and *vice versâ* if his eldest child is a girl.

They profess to be able to tell whether a man will be killed on an expedition or not by examining the entrails of an ox or sheep. Some even say that in this way a skilled soothsayer will prophesy future events; for instance, he will perhaps say that in so many days news of fighting will arrive, or that a certain disease will appear, or that in say three days a white cow will arrive at the village.

The head chief of each tribe decides when the people are to plant their crops, and some chiefs are said to be able to foretell whether the harvest will be good or bad. The chief Odera is said to have prophesied the advent of European rule when he was quite young. They go to the Nyole rainmaker Mgahanya for rain, and also went to his father Ligiri. [241]

Names.—Many names of men and women are the same, others again only differ in the first letter; for instance, Apio is generally a female name and Opio a male name. 551

Beliefs.—They call the Divinity by the name Chieng, which is the sun; when a man comes out of his house in the morning he spits to the east and in the evening he expectorates to the west. If the sunset is extremely red it is said to be a sign that an important man will die in the tribe. They believe that the spirit of a man goes upwards at death.

If a hailstorm occurs no one goes to work in the fields on the following day.

Shooting stars are said to be a sign of war.

[pp. 36-51 not processed]

241 Similarly, during this time she must be careful where she walks. She
841 can ruin a crop by walking through it. But, of course, in this case, she would suffer with the other members of the family.

462 From early childhood the girl is brought up as an agricultural labourer. There was no class of women divorced from the soil. The
787 only class whose labours in agriculture were lightened were the women
791 who belonged to the divining cult of " SEWE." Sewe is the spirit of divination and is supposed to have descended on those who have been delirious in illness. The delirium is the sign of possession. The devotees of the cult are mainly women, and they are a fairly common sight as they go about their avocation. They are skilled beggars as
[301] well as diviners. With their bodies festooned with strings of beads, shells, bells and other barbaric ornaments, they pass from kraal to kraal, and standing with their bodies leaning forward supported by a
[431] hand resting on a short stick they sing songs of the countryside and and are rewarded by presents of small baskets of grain. In this way women who have been ill are enabled to help to replenish the grain stores, which have probably run low during the illness.

241 Gradually a change is coming over the life of the women, due to
177 white influence. Ploughing by the men with teams of oxen, is setting women free for other tasks. This movement is by no means wide-
252 spread, but it has begun, and its effect on the women has been great.
462 Even if the husband has no team and plough himself, many wives do not rest content until the husband has hired a plough owner to come along and plough up the land. It is not unusual for ploughs to be taken 15 miles for this purpose. Again, the use of hand mills of the " Colonist " type, is easing women of much labour at the grind stones. These are much more common than ploughs, probably there are twenty mills for every plough in use. This is partly accounted for by the fact that the mills are turned by hand power, not by oxen. At this labour girls and women take their share, but whereas you would never see a man down on his knees at the grindstone, you do see them turning a mill. New activities are employing the time of many women, and those who have learned to knit or make palm mats in recent years are rapidly increasing in numbers.

CHILD LABOUR:

857 Generally speaking, from early childhood, all are required to make some contribution to the activities of the home. Girls for the fields, and boys for herding, is the broad division of labour, though the boys also lend a hand in the fields, and, very occasionally, a girl or woman may be seen herding. With the opening up of
593 avenues of wage-earning to the boys on coffee and tea estates, and in
[464 other forms of employment, the male child is being made by impecuni-
651] ous parents to make his contribution to the family hut tax,

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

775 unsettled quarrel with her husband or one of her co-wives;
626 and a ghost is forgotten by his kin. It is said that if a corpse smells it is a sign that the dead person is ill disposed. As the Luo regard the ghosts as one of the principal causes of sickness and other misfortunes and since it is believed that almost any wrong done to a kinsman may be punished by him after his death, it may be supposed that this representation is a powerful sanction of conduct within the family and kin. I was told that any old person who is neglected may cause a relative to be more attentive by the threat 'You will see me,' meaning that when the person is dead he will haunt those who have neglected him unless they make amends. People who are happy and contented in life do not cause trouble when they are dead. It is the disgruntled and resentful who cause trouble.

753 Luo who fall sick get a diviner (*ajuoga*) to discover the
755 cause, and if he says that the sickness is due to a particular
775 ghost on account of some grievance they hasten to compensate (*colo*) the ghost for the wrong they have done him by
● [787] sacrificing an animal or fowl at his grave. It is customary to sacrifice a quail or fowl for a sick woman and a sheep or goat for a sick man. When a beast is sacrificed it is first tethered while whoever is conducting the ceremony makes an invocation (*lamo*) over it. If the sacrifice is acceptable to the ghost the animal urinates. They then rub its back (*wiro*) with the moist earth where it has urinated, and afterwards sacrifice it. The meat is eaten by the sick man's kin and a strip of the skin is tied round his wrist.

755 If the *jacien* is not appeased by sacrifice they may get a
775 magician called *mugalu* to protect the sick man's homestead. He buries a pot containing medicines in or just outside the homestead. If the ghost continues to cause trouble they summon an exorcist (*jadilo*). He first sacrifices an ox and warns the dead man that if he is not content with this sacrifice he will dig up his bones and burn them and throw the ashes into lake or marsh. Luo told me that they prefer to get a Bantu to do this for them, if it is found to be necessary, and that sometimes instead of digging up the dead man's bones the exorcist makes a hole in the grave and pours boiling water down it.

[p. 86 c]

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

husband and runs away, the amount which he has already paid on her behalf is returned and the marriage is broken off. If a woman finds herself unmarried after a long period, it is customary for her to go to a chief or a rich man and state that she has come to stay and cook for him. In such case she is usually taken to wife, but a very small complimentary present is paid for her. Chiefs may have from ten to forty wives. The Ja-luo are, generally speaking, very moral. They do not intermarry in

436. EMPTYING THE FISH-BASKETS (JA-LUO)

the same clan, but a man may marry the daughter of one who bears the same name as himself.

The Ja-luo believe in *a supreme God* whom they call "Chieng." This, however, is the same name as the sun. When a man comes out of his house in the morning, he spits towards the east, and in the evening he spits towards the west. If the sunset is extremely red, it is said to indicate the approaching death of an important person. They believe that after death the spirits of the departed go up to the sky. If a hailstorm occurs, no one goes to work in the fields on the following day. Shooting stars are said to be a sign of war. They believe that people can be killed by *witchcraft*, and that a wizard has only to show "medicine" to a person

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

754 in order to kill him. If a person is thought to be bewitched, the medicine
[683] man concerned is caught and forced to remove the spell, afterwards being punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkingo." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a
695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

●787 As regards *omens*: If a bird sings on the left-hand side as a man
777 is starting on a journey, the journey, if for war, will be unlucky; but if it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that
787 is likewise a bad sign. They profess to be able to foretell events by *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad prophesied the coming of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 On the occasion of a *birth* the infant, if a boy, is kept inside the house
[844] for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

761 For example, they were reputed to be able to recall to life a dying
795 person or one who had just died. The procedure here began with the priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called " Buombwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially " Called " by Mumbo himself, and also any other people who, although not specifically " Called," chose to join the cult.

795 At sunrise and at sunset all Mumboites stand facing the sun with the first finger and thumb of each hand meeting to form a circle and
● 788 held up to the eyes like binoculars. Having gazed at the sun intensely until they are completely dazzled, they stretch out their arms towards
782 it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 As was to be expected from a retrogressive religion which not only
782 encouraged but ordained idleness and uncleanliness, it was not long before its adherents, having nothing to do or to think about, began to
899 indulge in unpleasant practices which the normal Jaluo, however uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

husband and runs away, the amount which he has already paid on her behalf is returned and the marriage is broken off. If a woman finds herself unmarried after a long period, it is customary for her to go to a chief or a rich man and state that she has come to stay and cook for him. In such case she is usually taken to wife, but a very small complimentary present is paid for her. Chiefs may have from ten to forty wives. The Ja-luo are, generally speaking, very moral. They do not intermarry in

436. REPTILE TRAPS (Ja-luo)

the same clan, but a man may marry the daughter of one who bears the same name as himself.

The Ja-luo believe in a *supreme God* whom they call "Chieng." This, however, is the same name as the sun. When a man comes out of his house in the morning, he spits towards the east, and in the evening he spits towards the west. If the sunset is extremely red, it is said to indicate the approaching death of an important person. They believe that after death the spirits of the departed go up to the sky. If a hailstorm occurs, no one goes to work in the fields on the following day. Shooting stars are said to be a sign of war. They believe that people can be killed by *witchcraft*, and that a wizard has only to show "medicine" to a person

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

765 a dead person shave their heads for three days after the death. The eldest son of the deceased sits on a stool outside the village, and has his head shaved. If any one of importance dies, the neighbours do not
766 cultivate for three days after the death. If a big chief dies, all the surrounding people collect at the village, and in such cases even hostilities between clans are suspended, and all join in the funeral rites of the late chief, even if he happens to be at war with some of his dependent clans. In the case of the death of a chief, a new hut is built. The grave of the chief is dug by his brother. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water-pot. Seeds of every kind of grain grown in the vicinity are put into the grave, but sweet potatoes are excluded. The people dance and drink "tembo" for ten days, and slaughter many oxen. The men wail for ten days, but the women wail every morning for a year. No one cultivates the fields for ten days.

428 When a man dies, his *property* goes to the brother, if the children are small. If the eldest son is grown up, he takes the property and gives his brothers a share, but a man is not allowed to take the amount paid by any one who marries one of his sisters. This marriage payment goes to
[58] the deceased father's brothers. The brothers of the deceased take his wives,
[622] but the eldest son probably takes the youngest wife of his deceased father. When a chief dies, the son whom he has chosen succeeds him. This successor is chosen really some years before the chief dies. The successor divides the private property of the chief with his brothers.

727 When a warrior *has killed a man in warfare*, he must (besides
782 shaving his head) catch a fowl and hang it round his neck head uppermost. He must not enter his home village until this has been done. Whilst the fowl is suspended to the man's neck by the beak its head is severed from the body, and the head is left hanging from the man's neck. The warrior then enters the village and shortly afterwards prepares a big feast to propitiate the man he has killed, so that his ghost may not give
● 788 trouble. If a house is struck by *lightning*, and any one is killed inside, the head-man of the village must obtain a male fowl of a red colour and walk round the house holding up the fowl three times. The house is then broken up, and the wood is used for other purposes. When desiring
728 *to make peace* with another tribe with whom they have been at war, they kill a sheep and put part of it into a wooden mortar such as is used for crushing grain. The representatives of each side then take out pieces of the flesh and exchange them reciprocally. An old man belonging to the side which has been worsted, and which is suing for peace, must
[234] then go to the head village of the conqueror and proceed to sweep up the cattle kraal. This is accepted as a kind of submission.

145 Like the Bantu Kavirondo, the Ja-luo are in the main a *healthy people*.

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *mon koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted.

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witch-doctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' (*jambingo*) which, among the Gesi tribe is practised by the blacksmiths.(4)

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth.

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances.

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Games.—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

Upon return from war about two out of every three cattle go to the *chief*; the *chief* then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the *chief*. A man who distinguishes himself in war is also often given a wife without payment.

Food, etc.—They eat practically all meat except that of the hyæna. Some young men eat leopard meat to make them fierce in fighting; the meat of a serval cat is not eaten. The women do but eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balearica pilbericeps*) is never killed or eaten by these people.

Medicine, etc.—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for ulcers and for purging, but not for diarrhœa. They also have medicine to avert a threatened miscarriage. They profess to have a certain antidote for snake poison.* Venereal disease is practically unknown among the Ja-Luo.

Before going to war they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called *Odola*.

Peace ceremonies.—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representative of each side takes out a piece and gives it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and proceed to sweep up the cattle boma; this will be accepted as a sign of submission.

Killing animals for food.—They kill oxen by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

Succession customs, etc.—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the wives, but the eldest son will probably take the youngest wife of his deceased father.

* After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Rendle, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Phyteuma Abyssinica*, is used internally, an infusion being made from the leaves. The other plant, *Spermacoce pedunculata*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

584 dispose of it as he pleased. On her return a feast was held—the *tero*
ayako—for her and her companions. Preparations for this feast were
made before her arrival, and the guests invited and the kind of enter-
tainment provided seems to have varied according to the family
circumstances. If the parents were poor only the girl's sisters and
the friends of her own age who had accompanied her were present;
porridge and milk were set before them, and the guests returned on
the same day to their own homes. But if the family was rich, older
relations and friends of both sexes were invited and were given meat
and beer. The quantity of beer required was often more than could
[343] be stored in the accustomed place, namely the hut belonging to the
girl's mother, and in this case a temporary shelter was built, known
as the *siwandhe*. It was constructed of reed mats between the
mother's hut and the hut next to it, and if the number of reed mats
available in the *dala* was insufficient, more were borrowed from the
neighbours. After the beer had been drunk the *siwandhe* hut was
dismantled and its component parts returned to their owners. The
[435 guests stayed two or even three days, and it was the convention that
252] before their departure a final meal of meat or of a kind of dried fish
called *kabaka* (an expensive dish that cost a goat to buy) should be
provided and cooked for them by the mother of the bride.

A sort of parallel to this feast known as *lupo* then took place in
the bridegroom's *dala*, a cow or a goat being sent to him by the bride's
parents to be killed and eaten by his brothers and sisters.

291 After the *tero ayako* and the *lupo* had taken place a bull known
584 as the *dho golo owimbo* was paid by the bridegroom, and with them
he sent a new *owimbo*, specially made for her, to the bride. She
then returned the *owimbo* lent to her by the bridegroom's sister, and
also took off the small *chiewo* and burnt it, being now entitled to wear
the big *chiewo* of the married woman. This was a bunch of aloe fibre
about ten inches long and thick enough to have a diameter of three or
four inches. It was tied tightly at the top like a tassel, and was worn
hanging from the small of the back, being attached to a string which
passed round the waist. This, and a six inch square apron of fibre
[778] string was all that a Luo woman wore, apart from her ornaments until
the advent of the Indian trader with his cotton piece goods at the
beginning of the century.*

[648] * Even now a woman who puts on a cotton dress when she leaves the *dala* sometimes reverts in the privacy of her home to the traditional raindance adorned only by the tassel and the fringe, and often the dress is put on over the tassel. This curious ornament has clearly a ritual if not a magical significance, of which I hope to obtain details later. I was informed that if a man touches, accidentally or purposely, the tassel of a married woman, he has to pay a fine of three goats to her husband. Moreover, when a woman loses her husband she discards her tassel of aloe fibre and replaces it by one of banana fibre, and this tassel
● [788] apparently has undefined properties. For if any man accepts her, she is likely to take it off and beat one of his cows with it, whereupon the cow is regarded as bewitched, and no one will buy it, or accept it in payment of a debt.

FOOD PRODUCTION AND KINDRED MATTERS, AMONGST THE LUO.

By Archdeacon W. E. Owen.

(Paper read at the 3rd Annual Scientific Meeting held in Nov., 1933.)

Soil.:

134 The production of food must necessarily be associated with knowledge of the soil. The principal soil varieties have been named by the Luo, and the methods appropriate to each variety are well known. Black cotton soil, called " anywang," occurs over a wide area, mainly around the lake shores, and is conspicuous in the locations of Uyoma, Karachwonya, Kasigunga and the Kano Plains. Red earth, called " lwala," is, speaking generally, found further back from the lake, on the higher lands, and is to be found over wide tracts in Central and South Kavirondo, a notable location being North Gem, in Central Kavirondo. Sandy soil, called " kwoyo," is generally found in the neighbourhood of outcrops of granite, which is a prominent feature in many parts. The locations of Asembo in Central Kavirondo, and Suna in South Kavirondo are good examples of areas where this sandy soil is abundant. Murram, called " gu " when solid and " go " when disintegrated into a soil, occurs in places all over the country, Sakwa and Alego in particular providing many examples of it. Stony soil, called " kite," is to be found over large stretches, particularly in those neighbourhoods where escarpments rise from the regions round the lake. Though the labour involved in the cultivation of this stony soil is very great, where there is pressure of population, every available patch is made to produce food.

Rainfall:

132 Over certain sections of the country rainfall is very uncertain. The worst locations in this respect are lower Seme, Uyoma, Sakwa, Kadimo, parts of Asembo, Mirunda, Kasigunga and Rusinga. In other districts rainfall is abundant, running from forty to sixty five inches in the year, well distributed over the months, with the exception of January and early February. January is reckoned to be the driest [520] month of the year, and is the month when there is most relaxation from agricultural operations, this being the favourite time for the inter-clan wrestling matches.

● 781 782 776 Contrary to what many would expect, amongst people who periodically suffer from lack of rain, the Luo have developed no system of rain makers. At the top of Usenge Hill in Kadimo, there is still to be seen a site marked by a collection of votive pots, where the local

789 elders gathered to offer sacrifice and supplicate the local spirit,
782 together with the clan spirits, in times of great drought, but this is
776 entirely different from the rain-making cult. Even in this instance, it is doubtful whether the ceremony has not been influenced in large measure by the neighbouring Bantu peoples. The particular guardian spirit of this hill, is reputed to be a fabulously big snake, so enormous as to be able to encircle the hill with its body. Away from the Lake shore, which suffers most from uncertain rainfall, the Luo account very easily for the fact that they have no rain-makers. They simply say that they never have lack of rain, so why should they have rain-makers.

791 But though they have no rain-makers, they have a term for rain-maker, whom they call "Jajimb koth." When they need a rain-maker they employ either a Bantu from the Basiekwe clan of the Banyole, or one from Mudhiero, Yiro in Marama. And, of course, it is not alone for agriculture that rain is needed. The fishing in the rivers suffers greatly when the rivers run low, and fishermen not infrequently call in the aid of the rain-maker. On the lower reaches
[782] of the Nzoia River, there existed a custom now happily extinct, according to which human sacrifice was made to the spirit of the river. The unfortunate person to be sacrificed was a girl, generally a young one and ill-favoured, who was bound, and some accounts say stunned, before being cast into the river. Rain-makers still flourish, though shorn of much of their influence and tribute. Only a few years ago I was in Uyoma during a time of rain shortage. I happened to be collecting genealogies, and was visiting the old men for this purpose. The conversation turned on the lack of rain, and I asked had they sent for the rain-maker. I really did not expect that they would have done so, and was somewhat surprised to find that they had sent their offerings to one of the Bantu of the Basiekwe clan. It seemed a pity that they should waste their substance on what could do them no
[609] earthly good, so I spent some time trying to convince them that the rain-maker had no power to bring rain. They listened very politely, but at the end of it were "of the same opinion still." I left them gently poking fun at them for being so credulous. I was about a mile or less from my camp, and during my walk home, suddenly, from nowhere, clouds rushed up, a violent rain storm pelted down and I got thoroughly drenched. I would have given a good deal to have been able to listen to the comments of those who had heard so politely my well-meant arguments. Incidents somewhat like this are, no doubt, responsible for the deep seated faith in the rain-makers' powers. It did not convince me.

241 The preparation of the soil for the seed was, and is, performed
791 without any ceremony of invocation preceding it, except when the land had been taken in conquest from enemies. In the latter case the

241 Besides weeding, there is much to be done to protect the crop.
[789] Hail storms do a lot of damage at times, and to protect the crops a
" medicine " is employed called ' migalo magalo pe." This consists
of herbs tied in a bunch to the top of a pole about 6—8 feet high,
which is stuck in the middle of the field. (Herdsmen too, use this
[231] to keep themselves dry while out with the cattle, and I have seen a
herdsman accompanying the cows with these herbs tied to the top
[674] of his spear.) Except in time of famine, stealing from the crop is
unknown, which contrasts favourably with complaints made from time
to time that Natives steal maize and coffee from European farms.
In their own community such an offence is practically unknown. But
241 four-legged depredators are a serious problem in certain localities.
417 Fields are enclosed in fences of the branches of thorn trees, laid on
136 the ground, and these do give a certain protection against wild pigs,
monkeys and baboons. But they are of no use against hippo and
elephant. To protect crops, mainly sweet potato, against the hippo
it is the practice to erect a small temporary hut, which is occupied at
night by a guard armed with a couple of spears. It must be a weary
business, for the potatoes are cultivated close to the lake edge where
mosquitoes swarm, so between the hippo and the mosquitoes the guard
[224] must have a trying time. In old days before the Game laws came in,
organized hunts were held, which were very successful.

241 The most difficult animal is, of course, the elephant. These have
disappeared from Central Kavirondo but still infest districts like
136 Mirunda and Sakwa in South Kavirondo. They can do heavy damage
both to millet and sweet potato. The beating of pots and pans is tried
to scare away the elephant, while occasionally the more daring venture
forth from the hut to throw stones or otherwise drive away the beasts.
This is an operation attended with peril in the dark of the night, and
occasionally lives are lost in this way. Lives too are lost through
guards mistaking their fellow guards for wild animals. Jok, one of
the most famous of ancestors of the Luo, is said to have lost his life
in this way. The story is that before going off to drink beer, he
told his sons to go on guard in the field that night. They refused to
his face, but when he had gone thought better of it, and went on
guard. He returned from the beer drink, and went to see what was
happening in the field, believing that there was no guard. His sons
mistook his footsteps for that of a pig, and speared him with fatal
results. Similar things still occur from time to time.

241 Birds, especially weaver birds, are a pest as the grain crop
ripens. Scarecrows are employed, both mechanical and human. Of
136 the former an inverted cooking pot on the top of a short pole is a
857 common device. Boys are employed in large numbers when the birds
are most troublesome, and their harsh cries are quite a part of the

241 life of the countryside. Ofttimes the boys are armed with slings from
136 which stones are projected at random into the midst of the crop, or
857 into the midst of a flock of birds as they rise. One of the reasons why the Luo denude the land of trees is because they give harbourage to their bird enemies.

241 They are wise to insect pests also, and have a greater belief in
136 their remedies than many a farmer has in the aids supplied by our civilization. The medicine is called by two names, " yadh miri " or
789 " yadh lisese." It is employed against a small red and black beetle, called by the Luo " Nyanginja " which eats the flower of the millet, thus preventing a crop. The medicine man who prepares it must be a man of peaceable disposition and character, not a quarreller or disputer with his neighbours. The whole success of the medicine depends on the absence of disputation and quarrelling, and of the grosser forms of vice, like adultery. No adulterer may be supplied
[837] with the medicine, for his very handling of it would nullify its usefulness, not only for himself, but also for his neighbours. All must be peace in the community until the harvest is reaped. Unlike other medicines, which are tied to a pole and left to work their influence, " yadh miri " is made into a decoction, which is sprinkled over the growing crop at eventide. I have seen the operation at a place called Maranda in Sakwa, Central Kavirondo. It was then being used against maize borer. At a time when this pest was giving a good deal of trouble to European farmers, I heard a man who was back in the Reserve on leave from a farm in the Kitale district, pour scorn on the methods used by Europeans with various sprays. He was by way of being one of the more progressive men, but he had nothing but absolute faith in the efficacy of " yadh miri."

578 Crops damaged by domestic stock gave rise to many an angry
685 passion. The owner of the crop had liberty to chastise personally the herdboy (or man) through whose carelessness the stock were left untended. If the herd were a lad he could be cuffed and thumped without being able to proceed against the assailant. Nor did the father protest, provided the chastisement were in reason, for he knew that his son had rendered him liable to a claim for compensation. As likely as not he would add his own quota to the punishment already meted out. If the owner feared that he would get the worst of it in a personal encounter with a herdsman, then he had his remedy at law.

241 When the crop is ready for harvesting it is the duty of the men to do the reaping. In the case of millet, this is a laborious business, calling for judgment, for not all the heads would be ripe, and some must be left to ripen after the bulk has been reaped. It is the task
[462 of the women and children to pack the crop into the grain baskets
857] and carry it to the grain stores. In the case of millet it is quite

584 the negotiations, which is partaken of in a hut, not outside. To this feast three or four friends of each side are invited as witnesses. When the beer drinking stage has been reached, the company sit round the [273] beer pot in a circle, and the provider of the feast takes the long hollow beer-sucker, puts the end provided with a strainer in the pot, takes a few sucks, and then hands it across to the other party with the invitation to drink if he agrees to a matrimonial alliance between the two families taking place. If the second party desires at the last moment [675] to withdraw he declines to drink, but once having accepted the invitation and completed the contract by drinking, it is as irrevocable as a contract can be. The children thus pledged to marry may be so young that the marriage can not take place for years, or the girl may be a child, while the other may be a man already married. The girl so pledged in this way is known in some parts, as in Asembo, as " nyar oseke," " the girl of the beer sucker," and the Luo have no stronger matrimonial contract. It is hedged about with potent penalties, 584 mainly magical, in case of any breach of the contract by either of the ●789 parties pledged. But even this most binding of all binding contracts is not invariably kept. Occasionally a girl will not submit to the fate marked out for her, and if she can find a man brave enough to join his fortune with hers, they undergo a ceremony, the essential feature of which is the drinking of " medicine " called " manyasi." This is supposed to render harmless the evils which would otherwise befall them.

789 Women are by no means so helpless when bound to their husbands as many are inclined to believe. *In some ways* wives are in a stronger 593 position than are women in lands where magic is not believed in. Luo women have many weapons in their armoury, by which they can bring their husbands into subjection, or perhaps I ought to say, something like subjection. I cannot find that these weapons are resorted to frivolously. A woman has to be hard pushed to bring them into play. One of which we hear a good deal is a curse debarring cohabitation. It is very simple in operation. Striking her thigh with her open palm, the wife vows never to cohabit again. The striking of the thigh is essential. Once this is done dire penalties, sickness of himself and children, will result if the husband attempts to force consent. The fat is now truly in the fire, and the husband has to come to terms with his wife. When he has succeeded in mollifying her " manyasi," the medicine already mentioned, is drunk to break the curse. At this 241 stage of social development a belief in magic does serve the needs of 841 women in certain circumstances. She has powers in connection with agriculture which can be devastating. For instance, during her menses *no woman must sow seed. In the family of a polygamist lesser wives* dare not approach the " mikayi " or chief wife to share in the labour at this time. Such contact with the seed would prejudice the crop.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

681 pay the fine, and from the amount the judge takes a portion for himself and passes the remainder to the successful litigant.

728 627 **Making peace between sections of the tribe.** Should there be a quarrel between two sections of the tribe and a desire be felt to end the strife, the chief of one section goes to the chief of the other with a few of his principal men, and they spend the afternoon and night together discussing the difficulty and finally coming to terms. The following day a goat is killed, some of the contents of the stomach are smeared over the chests of those present, and a little of the meat is pounded in a mortar and eaten as a sacred meal to ratify the terms of peace. As they eat the meal, they promise to live at peace, the form of oath taken being "By the dead dog."

674 789 **Theft.** Cattle lifting is the most common form of serious theft. Men seek to steal cattle from members of the same tribe living at a distance from their own district, because the animals stolen can thus be more easily secreted. A man who intends to rob a kraal first visits the place with his son in order to work magic and to make his preparations. He takes with him a number of sticks pointed and prepared for the magic, and indicates certain spots to his son, who drives a stick into the ground at each place. These are magical sticks which cast a spell upon owners of cattle. The magic is followed up at night by the man's going to the kraal, opening the gate and driving away the cattle while the people are sleeping. Should the animals make any noise or prove stubborn and refuse to leave the kraal, it is a sign that the owners have received some intimation of the intended theft and have taken precautions to make more potent magic to frustrate the robbery. Under [685] such circumstances the cattle-lifter beats a hasty retreat before he is discovered and captured, as he knows that he will receive no quarter, but will certainly be put to death.

Chiefs possessing large herds of cattle take the precaution to keep a supply of powerful medicine over the gateway leading into the kraal, and also place it in various parts of the kraal so that, when a thief enters the kraal, he loses his strength, is unable to walk and so is captured and put to 554 death. A successful cattle-lifter soon becomes a noted man

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

776 782 flesh is cooked and eaten near by, though sometimes the meat is taken a little distance away and is not eaten under the shadow of the tree.

789 791 **Rain-making.** Rain-making is an important ceremony, but it is performed by a Musoga priest who lives among the people for the purpose of assisting them in discharging those religious obligations which they consider necessary yet do not themselves understand how to perform. The man is treated with great respect and has a comfortable existence among them.

Relationships.

601 **Terms of relationship.** The following terms of relationship were supplied by the Rev. J. J. Willis, now Bishop of Uganda, formerly a C.M.S. Missionary at Maseno, Kavirondo, who says that the pronominal forms for Father and Mother are used, that is, each person says "My father" or "My mother" (m.s. = man speaks, w.s. = woman speaks).

Father, won, wora
Mother, min, mama
Eldest brother (m.s.), kayo, ng'amodwong'ena
Eldest sister (w.s.), nyamin madwong', nyamera madwong'
Sister (m.s.), Nyamin, Nyamera.
Father's brother, omin won, omin worwa
Father's brother's wife, min, minwa mama
Father's brother's child, owat, owadwa
Father's sister, wa, waya
Father's sister's husband, chwor wa, chwor waya
Father's sister's child (boy), wod wa, wod waya
Father's sister's child (girl), nyar wa, nyar waya
Mother's brother, ner, nera
Mother's brother's wife, chi ner, chi nera
Mother's brother's child (boy), woda ner, woda nera
Mother's brother's child (girl), min, mama
Mother's sister, min, mama
Mother's sister's husband, won, wonwa
Mother's sister's child (boy), owat mar nyina hao, owadwa mar nyina hao

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

754 The evil eye, it is claimed, can make a sound man sick, and kill a man who is
755 ill, or an unborn child. Most diseases are attributed to the evil eye or to
757 malignant spirits, and so the best remedy is to make as much noise near the sick man as possible, in order to drive the evil ones away. In addition to this universal remedy, the Jaluo use a considerable variety of herbal medicines, and they are also expert at wet and dry cupping. Sometimes, however, the treatment is of a distinctly quack nature. Some time ago a native practitioner brought a case of assault against the husband of one of his patients. The defence set up was that the accused called in the prosecutor to treat his wife, and that the latter, after much cogitation, ordered the woman to climb to the roof of her hut and stay there till she was better. Unfortunately, the patient died under her open-air cure; her husband laid her death at the doctor's door and took steps to settle his account with the professor of healing arts, with a club. On another occasion the writer was summoned to an accident in the lime quarry in the district. One of the injured was suffering from a broken thigh and internal injuries. He put on a temporary splint, sent for the Indian apothecary, and gave orders that the patient
[752] was not to be moved in the "interim." Next day, however, the apothecary found, on arriving at the scene of the accident, that a Kavirondo surgeon had been called in; the latter was much puzzled by the complications of the case, and, in order to make a better diagnosis, cut the man open, with the not unnatural result that he died.

● 789 But, although the wizard is held in abhorrence and dread, the rain-maker is greatly esteemed: his success probably depends upon a knowledge of the signs of the heavens, but his methods are as follows: His village is to be found as a rule near a big tree, which he asserts is sacred; when rain is wanted he gathers some herbs and puts them in a large pot containing water, which he boils beneath the holy tree. Of the decoction thus prepared he draws off a little into a smaller pot, above which he squats on his haunches. Next a reed is produced, and through this the rain-maker draws up a little of the liquid and then squirts it forth into the air after blowing through the reed and causing the fluid in the pot to bubble; the whole process being punctuated by voluble mutterings and *abracadabra*. A reputation for uncanny powers, however, can be obtained even more easily than this, as the following anecdote will show. Some time ago, during the lesser rains, the natives of the valley in which the writer's station is situate, came and complained that a famous rain-maker was deflecting all the rain to the hills, so that the crops in the valley were dying. Would the Bwana (master) send a policeman and arrest the evil-doer? The Bwana did not see his way to such an arbitrary proceeding, but, being curious to see the wizard, scribbled a few crooked lines on a sheet of paper and told the applicants to show this to the rain-maker as a sign that the Bwana wished to speak with him. Next day they came back and said that the wizard had refused to come for the reason that the letter was not genuine but had emanated from an Indian shopkeeper; the writer told them to wait a few days, meaning to postpone the matter *sine die*. It so happened, however, that that evening a tremendous

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

storm of rain broke over the valley, and next morning the complainants were back again to point out that his refusal to come in at the Bwana's summons had so frightened the rain-maker that he had sent rain next day, and to offer most hearty thanks for the white man's beneficent interference.

Though the Jaluo have good manners on the whole, some of their customs are decidedly the reverse of civilised. In common with the other Nilotic tribes of British East Africa, they draw blood from the living cattle and drink it. The custom, however, has its justification, for in many parts of Kavirondo this is the only method by which the natives can obtain salt. Also the older men are confirmed drunkards and hemp smokers, which causes them to age very quickly and probably shortens the average term of life.

Those who dwell on the shores of the great lake and of the larger rivers are expert fishermen: they catch fish with rod and line, a sunken trawl line, in weirs, by woven grass substitutes for nets, and by spearing them with four-pronged wooden spears which they throw with extraordinary accuracy. They are also keen huntsmen, though of little use out shooting, and possess highly trained dogs which will run down an oribi or hare or find a wounded guinea fowl knocked down by their throwing sticks.

In character they are naturally very honest, except with regard to cattle, a temptation which no East African can withstand. They are extremely jealous of any relations between their women and men of other tribes, nations or colour; but among themselves an unmarried woman who has reached the age of puberty may have as many friends, as they call them, as she likes, provided that they come from another clan; after marriage she must confine her attentions to her husband.

Perhaps their most pleasant trait is their love of fun and laughter: the feeblest joke or the slightest bit of horse-play will set them in roars of laughter. For hospitality and industry they have a well-earned name; they are, in fact, in every way most amenable when treated with a little kindness and consideration. They have a considerable knowledge of blacksmith's work, though the spears which they turn out cannot be compared with those of the Masai for fine work. With the latter tribe, however, they show a well-developed artistic sense, the designs on their shields being generally handsome and well carried out. They are also very fond of music—of a kind: they play upon an eight-stringed harp, which is mainly used to provide an accompaniment to their extempore songs, composed in the heroic or comic vein.

Speaking generally and comparatively they are a peaceful, non-aggressive folk, though the common impression that they are cowards is ridiculously wrong: in the writer's small experience of African tribes they have shown themselves better fighters than the much-landed Swahili, and better policemen than the dreaded Masai; they are certainly more amenable to discipline and less inclined to prefer their own wisdom to that of their officers.

On the other hand they are most painfully litigious: civil cases which arise in

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

Behind and beyond are old beliefs that are still alive. A man can lay upon a piece of land, when he is dying, an oath that binds his heirs to hold on to it for ever, and will destroy anyone who sells it out of the family—an entail with the sanction of magic. And then old homesteads on the Kano plains sheltering behind euphorbia hedges contain the bones of the deceased owner, who is buried under the floor of his hut. So consolidation may ask the son to exchange not merely a field of maize, but the bones of his father, the terrestrial anchor of his father's spirit. No wonder it is often too much to ask, and that politicians find these deep fires easy to fan.

To reach Nyabondo we climbed a small escarpment, the beginning of the Kipsigis hills, left the car beside a track and walked to the farm of a young, pleasant-mannered school supervisor called James Onyango, one of the leaders of the enclosure movement. We sat under a tree near his new tin-roofed modern bungalow, above a shallow valley with a stream. The country here is gently rolling and thickly dotted with roofs of homesteads. Many people had gathered in a circle; the women sat together in bright cottons and gay head-scarves, plump and glossy, most of them with grave-faced, round-eyed babies sleeping in their arms or crawling about the grass beside them. This question of land touches the women at the core. James Onyango told his story in English.

"The idea of exchanging gardens came to us two years ago; we had heard of it in other places; most of us were interested, and asked the Government to advise. We held a meeting and agreed unanimously to consolidate, all of us within the Kadianga clan, fifty-nine families. In our clan are three sub-clans; each appointed three men to form a committee. Each of these three was a *n'gura*—an elder whose task is to look after the land, and one of these was made the president.

"We started to exchange our gardens, and at first everything was fair. Then came elections for the Legislative Council and the District Council. The candidates thought they would gain popularity by speaking against the land schemes. They campaigned among the people, and some listened. They had clever ways. In each sub-location they had an agent who

614
613
578

tions. Sometimes several lineages can claim this right, and the structural differentiation and the type of connecting link between them is revealed in the resulting disputes.

IMPORTANT MEN AMONG THE LUO

554

There is no real political office in the Luo tribes, but there are a number of people who are of notable status.

The Ruoth

The *ruoth* is simply an influential man. He is richer in wives and cattle than most people, and he may help a poor man to marry by giving him a cow. Any man may become a *ruoth*, although he is usually a member of the dominant clan of the tribe. No such political or ritual significance are attached to the Luo *ruoth* as are associated with the Lango and Acholi *rwodi*.(1)

Thuondi

The *thuondi* are warriors of reputation. They lead all the raids against the tribal enemies. Their position depends entirely on individual ability in war, and therefore they are not necessarily succeeded by their sons.

The Won Gweng

The won *gweng* is the father of the land and a man of influence in every district. He is a senior member of a lineage of the dominant clan of the tribe, and settles land disputes within the tribe. He also sacrifices to the sacred spear of the clan, and points it towards the enemy before a tribal war begins.(2)

RITUAL EXPERTS

554
791

The *jabilo* is the most important of the ritual experts and the chief tribal figure. There may be more than one *jabilo* in each tribal segment, but usually one is more influential than the rest. The *jabilo* inherits his position from his father. His functions include divination of the fortunes of war, cursing the enemy and making magic to secure victory. Although he does not accompany the warriors, the *jabilo* receives part of the spoil in return for his services and is, therefore, usually a *ruoth* - a rich man. A further investigation of the *jabilo*'s place in society would be particularly interesting. It is said that he was also a peace-maker and could intervene in a fight by dragging his leopard-skin along the ground between the two opposing sides.(3) The *jabilo* sometimes exercises the functions of rain-maker (*jaboth* or *won koth*).

679
791

Luo tribal structure appears to be, in all essentials, similar to that of the Nuer; the typical segmentary lineage structure, associated

cf. Nuer leopard-skin chief.

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

sented the senior lineage of the clan sacrificed to the sacred spear of the clan and pointed it towards the enemy before tribal war.

There were also a number of ritual experts. The most important of these, and the most important tribal figures among the Luo, seems to have been the *jabilo*, who in the language of African literature would be described as a tribal medicine-man or witchdoctor. There was one of these functionaries in each large tribal segment but one in a tribe was generally more influential than the others and a tribe requiring the services of an exceptionally famous *jabilo* might ask for them even if he lived in a distant tribe. His functions, which tended to pass from father to son, are said to have been to divine the fortunes of war, to curse the enemy, and to make magic to secure victory and the safety of the warriors. He kept his *bilo*, war magic, in horns in a granary. He did not himself accompany a raid but in return for his ritual services he received part of the spoils and according to some informants was entrusted with its division. Consequently he was a *ruoth*, man of substance. The *jabilo* was also, at least sometimes, the *jokoth* or *won koth*, the rainmaker, while at other times the rainmaker seems to have been a different person to the *jabilo*. Rainmakers among neighbouring Bantu peoples were also appealed to. It is also said that the people had to wait permission of the *jabilo* to sow and that he had ritual functions in cases of homicide within the tribe and that he was a peacemaker who could intervene in a fight by dragging his leopard skin along the ground between the two sides.

4

In each tribe there is a dominant clan or lineage. The characteristics of a Luo clan are much the same as those I have described for the Nuer.

The Luo clan (*dho ot*) has a lineage structure, which means that every member of it can trace his exact genealogical relationship to every other member. Lineages (*dho udi*) are differentiated by adding to the name of a clan or of a larger lineage the copulative *ma* and the name of a smaller branch, as among the Lango, e.g. *Joseje ma Jokayila* are the Jokayila major lineage of the Joseje maximal lineage of the JoAlego clan. Collateral lineages are sometimes said to be *kanyiego*, presumably from *nyieka*, co-*wife*, to one another.

These larger clans associated with tribal territories are not always exogamous to-day, though they are believed to have been so in past times. It would be confusing to speak of two groups identical in their structural features by different terms because maximal lineages cannot intermarry in one and can intermarry in the other, so I use the word 'clan' for both, having stated a qualification to the accepted use of the term. Marriage is generally forbidden within the clan but it is recognised that the distance between maximal lineages may become so great, both in lineage-distance and through political and social separation, as to allow intermarriage between them. This has happened in the JoAlego clan of Alego where two main lineages, the JoSeje and the KaDenge quarrelled and now intermarry sometimes. On the other hand marriage is not permitted within such big clans as the KaNyikal of Seme, the KaRacuonyo of Karacuonyo, and

795 Lastly, my followers must immediately slaughter all their cattle, sheep, and goats. When this is done, I will provide them with as many more as they want from the Lake." Having said this, the snake disappeared into the lake.

Onyango soon set about spreading his gospel and, as was natural with so attractive a programme, it was not long before he had a considerable following. They were divided into what may be described as two Degrees. The First Degree consisted of those personally "called" [786] in very much the same way as Onyango had been " called." They were all men, mostly older men and the heads of Bomas. The "call" consisted in their throwing some kind of fit, possibly an ecstacy of religious exaltation, during which words poured from them in an un- [791] intelligible torrent. They became the priests and were in tremendous demand as witch-doctors since they soon were invested with, or themselves assumed supernatural powers.

761 For example, they were reputed to be able to recall to life a dying person or one who had just died. The procedure here began with the 795 priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called " Buombwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially " Called " by Mumbo himself, and also any other people who, although not specifically " Called," chose to join the cult.

795 At sunrise and at sunset all Mumboites stand facing the sun with 788 the first finger and thumb of each hand meeting to form a circle and 782 held up to the eyes like binoculars. Having gazed at the sun intensely until they are completely dazzled, they stretch out their arms towards it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 As was to be expected from a retrogressive religion which not only 782 encouraged but ordained idleness and uncleanliness, it was not long 859 before its adherents, having nothing to do or to think about, began to indulge in unpleasant practices which the normal Jaluo, however uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

789 elders gathered to offer sacrifice and supplicate the local spirit,
782 together with the clan spirits, in times of great drought, but this is
776 entirely different from the rain-making cult. Even in this instance, it is doubtful whether the ceremony has not been influenced in large measure by the neighbouring Bantu peoples. The particular guardian spirit of this hill, is reputed to be a fabulously big snake, so enormous as to be able to encircle the hill with its body. Away from the Lake shore, which suffers most from uncertain rainfall, the Luo account very easily for the fact that they have no rain-makers. They simply say that they never have lack of rain, so why should they have rain-makers.

●791 But though they have no rain-makers, they have a term for rain-maker, whom they call "Jajimb koth." When they need a rain-maker they employ either a Bantu from the Basiekwe clan of the Banyole, or one from Mudhiero, Yiro in Marama. And, of course, it is not alone for agriculture that rain is needed. The fishing in the rivers suffers greatly when the rivers run low, and fishermen not infrequently call in the aid of the rain-maker. On the lower reaches [782] of the Nzoia River, there existed a custom now happily extinct, according to which human sacrifice was made to the spirit of the river. The unfortunate person to be sacrificed was a girl, generally a young one and ill-favoured, who was bound, and some accounts say stunned, before being cast into the river. Rain-makers still flourish, though shorn of much of their influence and tribute. Only a few years ago I was in Uyoma during a time of rain shortage. I happened to be collecting genealogies, and was visiting the old men for this purpose. The conversation turned on the lack of rain, and I asked had they sent for the rain-maker. I really did not expect that they would have done so, and was somewhat surprised to find that they had sent their offerings to one of the Bantu of the Basiekwe clan. It seemed a pity that they should waste their substance on what could do them no earthly good, so I spent some time trying to convince them that the [609] rain-maker had no power to bring rain. They listened very politely, but at the end of it were "of the same opinion still." I left them gently poking fun at them for being so credulous. I was about a mile or less from my camp, and during my walk home, suddenly, from nowhere, clouds rushed up, a violent rain storm pelted down and I got thoroughly drenched. I would have given a good deal to have been able to listen to the comments of those who had heard so politely my well-meant arguments. Incidents somewhat like this are, no doubt, responsible for the deep seated faith in the rain-makers' powers. It did not convince me.

241 The preparation of the soil for the seed was, and is, performed
791 without any ceremony of invocation preceding it, except when the land had been taken in conquest from enemies. In the latter case the

241 " Jabilo " or leading medicine-man of the community concerned per-
•791 formed a sacrifice or " misango " the purpose of which was to render ineffectual any harmful magic left behind in the soil by those from whom it had been taken. It occasionally happens even to-day that a cultivator will suspect that an enemy has buried " yath " or harmful medicine in a field. In this case no preparation of the soil of this field for a crop is begun until a diviner has been consulted in order to find out the enemy. The Luo have a great faith in the power of the diviner to discover an enemy. That the diviner denounces people, and that he is oft times right, cannot be denied. Sometimes it may be guess work, as when there has been a notorious quarrel and it is simple to suspect the other party in the quarrel, but at times the medicine man has more certain sources of information. In the year 1910 I had the good fortune to get into rather friendly relationships with a medicine man who had become a Christian. In one of our conversations I asked him how it was possible to divine a wrongdoer. He told me that it was generally very easy. If a man wished to put down medicine, he had to procure it from a medicine man. Or, if he proposed to rob his neighbour he applied to the medicine man for protective medicine. Following upon the injury or the robbery, the injured party applied to the local medicine man in order to find out the enemy. If the injured person was prepared to pay a fee exceeding that paid by the enemy, the medicine man had no scruples about giving his client away. But I do not say that this is a complete explanation of all the powers of divination exercised by medicine men. Still, there can be no doubt that often both parties consult the same diviner, just as at times in our own social life both parties to a lawsuit will approach the same lawyer. Perhaps I had better safeguard myself. I am not, please, to be understood as implying that a lawyer will give his client away.

241 In the preparation of the soil for the crop, all members of the family who are fit, take their share. Only in bush country, where there is heavy clearing to be done, is the work left to the men. This operation is called " bete." In all other types of land there is no discrimination between the sexes, even where tall grass, called " olenge," has to be dug up. But there is a certain amount of dis-
241 crimination amongst the age groups. When a man has advanced in
887 years, and younger members of his family are sufficient for food production, he leaves it to them, while he devotes himself to less arduous tasks, possibly herding, or some form of social service such as the elders perform in settling the lawsuits of the clan.

241 The next operation after "bete " is " puro," the turning over of the soil. Where weeds or grass have been heavy, this is followed by " wang'o " or burning. In sandy, stony or red soil, sowing the seed

241 common to allow some of the sturdier roots to spring up again and give a second crop. I have seen some very fine heads of grain as a result of this method.

251 The crop is stored, unthreshed if millet or maize, in large basket-
578 like receptacles, covered with thatch and standing on stones or supported on forked sticks across which a rough platform is made. It is the work of the man to prepare the grain stores, and I suppose that there is no more prolific source of domestic bickering than these supply. Some men are shiftless, and leave off the preparation of the stores until near to harvest, sometimes exhausting in so doing the patience of the wife. Or he may be neglectful, and leave the thatch unrepaired, rendering the grain liable to suffer from the weather. Many women would far rather see the living hut left in disrepair than that the grain should be imperilled.

251 The stores varies in size according to the grain for which it is
285 intended. The large size is for millet and maize, the small for the small millet and simsim. The Luo name for them is "dero." The large sizes run up to six feet high by about six feet in diameter. The small about four feet by three. They are made from swamp reeds built in a very coarse basket work fashion, and are finished off with a coating of cow dung inside. The better made stores have provision for access to the grain, by the simple device of cutting away a section from the top of the side, just under the thatch. It used to be the custom for a present of a small basket of grain to be given to the [931] Jobilo or medicine man, after harvest. This custom has already died 781 out in many places.

241 It was the woman's first care to secure seed for the next year.
962 Millet and maize was hung in the head, sometimes outside from the branch of a tree, more frequently from the roof of the hut. Smaller grain, and beans were stored in pots in the living hut, and to ensure their being kept in good condition, it was the woman's duty to empty the contents of the pots periodically onto a "thigo" or large circular flat basket work tray, or some part of the courtyard swept clean, that the sun might keep them dry. Seeds of seeds, owing to a planting dying off from lack of rain was a serious matter. Seed was then begged from neighbours more fortunate.

962 Not all the grain went into the common store, for all the cultiva-
963 tion was by no means the common united effort of all the members of the family. The main effort of the members was put into the fields from which all were to draw their food supply, but in addition individual members had their own plots which are called "mondo." The head of the family would have his own "mondo," and the grain from this went into a separate store. This grain formed a reserve in

Similarly, during this time she must be careful where she walks. She can ruin a crop by walking through it. But, of course, in this case, she would suffer with the other members of the family.

From early childhood the girl is brought up as an agricultural labourer. There was no class of women divorced from the soil. The only class whose labours in agriculture were lightened were the women who belonged to the divining cult of " SEWE." Sewe is the spirit of divination and is supposed to have descended on those who have been delirious in illness. The delirium is the sign of possession. The devotees of the cult are mainly women, and they are a fairly common sight as they go about their avocation. They are skilled beggars as well as diviners. With their bodies festooned with strings of beads, shells, bells and other barbaric ornaments, they pass from kraal to kraal, and standing with their bodies leaning forward supported by a hand resting on a short stick they sing songs of the countryside and and are rewarded by presents of small baskets of grain. In this way women who have been ill are enabled to help to replenish the grain stores, which have probably run low during the illness.

Gradually a change is coming over the life of the women, due to white influence. Ploughing by the men with teams of oxen, is setting women free for other tasks. This movement is by no means widespread, but it has begun, and its effect on the women has been great. Even if the husband has no team and plough himself, many wives do not rest content until the husband has hired a plough owner to come along and plough up the land. It is not unusual for ploughs to be taken 15 miles for this purpose. Again, the use of hand mills of the " Colonist " type, is easing women of much labour at the grind stones. These are much more common than ploughs, probably there are twenty mills for every plough in use. This is partly accounted for by the fact that the mills are turned by hand power, not by oxen. At this labour girls and women take their share, but whereas you would never see a man down on his knees at the grindstone, you do see them turning a mill. New activities are employing the time of many women, and those who have learned to knit or make palm mats in recent years are rapidly increasing in numbers.

Child Labour:

Generally speaking, from early childhood, all are required to make some contribution to the activities of the home. Girls for the fields, and boys for herding, is the broad division of labour, though the boys also lend a hand in the fields, and, very occasionally, a girl or women may be seen herding. With the opening up of avenues of wage-earning to the boys on coffee and tea estates, and in other forms of employment, the male child is being made by impecuni-
[illegible]

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

FL11 Loo FL11

776 782 flesh is cooked and eaten near by, though sometimes the meat is taken a little distance away and is not eaten under the shadow of the tree.

789 791 **Rain-making.** Rain-making is an important ceremony, but it is performed by a Musoga priest who lives among the people for the purpose of assisting them in discharging those religious obligations which they consider necessary yet do not themselves understand how to perform. The man is treated with great respect and has a comfortable existence among them.

Relationships.

601 **Terms of relationship.** The following terms of relationship were supplied by the Rev. J. J. Willis, now Bishop of Uganda, formerly a C.M.S. Missionary at Maseno, Kavirondo, who says that the pronominal forms for Father and Mother are used, that is, each person says "My father" or "My mother" (m.s. = man speaks, w.s. = woman speaks).

Father, won, wora
Mother, min, mama
Eldest brother (m.s.), kayo, ng'amodwong'ena
Eldest sister (w.s.), nyamin madwong', nyamera madwong'
Sister (m.s.), Nyamin, Nyamera.
Father's brother, omin won, omin worwa
Father's brother's wife, min, minwa mama

THE CULT OF MUMBO IN CENTRAL AND SOUTH KAVIRONDO.

By "Nyangweso."

124 Owing to the African's habit of giving the answer he imagines to be the one required instead of the real answer to a question, it has been a little difficult to sift fact from fiction as regards the Mumbo cult. A further complication is that in this religion, as in others, there are different sects who hold their own views as to the interpretation of the teachings of the founder. I have however endeavoured, after several interviews with members of the cult, and with others in a position to give reliable information, to eliminate minor local divergencies of belief, and to give a broad outline of the main beliefs and practices of the Mumboites.

795 In 1913, there lived in the Central Kavirondo location of Alego, a man named Onyango Dunde, of the Aseje clan. One evening as he sat in his hut, a gigantic snake appeared and swallowed him up. It was so big that as it stood on end in the lake (Lake Victoria) its head reached up into the clouds. Almost immediately afterwards it vomited Onyango back again into his hut, unscathed but rather shaken. Indeed it appears that this was just the snake's method of drawing Onyango's attention to the fact that it wished to speak with him, which it proceeded at once to do. It spoke more or less as follows:—

"I am the God Mumbo whose two homes are in the Sun and in the Lake. I have chosen you to be my mouth-piece. Go out and tell all Africans—and more especially the people of Alego—that from henceforth I am their God. Those whom I chose personally, and also those who acknowledge me, will live for ever in plenty. Their crops will grow of themselves and there will be no more need to work. I will cause cattle, sheep, and goats to come up out of the lake in great numbers to those who believe in me, but all unbelievers and their families and cattle will die out.

[134] "The Christian religion is rotten (mbovu) and so is its practice of making its believers wear clothes. My followers must let their hair grow—never cutting it. Their clothes shall be the skins of goats and cattle and they must never wash. All Europeans are your enemies, but the time is shortly coming when they will all disappear from our country.

"Daily sacrifice—preferably the males—of cattle, sheep, goats, and fowls shall be made to me. More especially do I prefer black bulls. Have no fear of sacrificing these as I will cause unlimited black cattle to come to you from the Lango (Masai, Nandi, and Lumbwa).

795 Lastly, my followers must immediately slaughter all their cattle, sheep, and goats. When this is done, I will provide them with as many more as they want from the Lake." Having said this, the snake disappeared into the lake.

Onyango soon set about spreading his gospel and, as was natural with so attractive a programme, it was not long before he had a considerable following. They were divided into what may be described as two Degrees. The First Degree consisted of those personally "called" in very much the same way as Onyango had been " called." They were all men, mostly older men and the heads of Bomas. The "call" consisted in their throwing some kind of fit, possibly an ecstacy of religious exaltation, during which words poured from them in an unintelligible torrent. They became the priests and were in tremendous demand as witch-doctors since they soon were invested with, or themselves assumed supernatural powers.

[786] [791]

761 795 For example, they were reputed to be able to recall to life a dying person or one who had just died. The procedure here began with the priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called " Bucmbwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially " Called " by Mumbo himself, and also any other people who, although not specifically " Called," chose to join the cult.

795 788 782 At sunrise and at sunset all Mumboites stand facing the sun with the first finger and thumb of each hand meeting to form a circle and held up to the eyes like binoculars. Having gazed at the sun intensely until they are completely dazzled, they stretch out their arms towards it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 782 859 As was to be expected from a retrogressive religion which not only encouraged but ordained idleness and uncleanliness, it was not long before its adherents, having nothing to do or to think about, began to indulge in unpleasant practices which the normal Jaluo, however uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

795
782
839

have been more common in South Kavirondo whither the cult had spread and had been received with enthusiasm.

The priests started " schools " which they usually placed on hill-tops, and in the best proselytising traditions, attracted potential adherents by giving feasts of their slaughtered cattle. They also built here and there what might be called groves or places for the worship of Mumbo where sacrifices were made to the accompaniment of many obscenities and dancing.

795
778

In some of these Groves were wooden idols, one of which has been presented to the Natural History Museum by Mr. C. M. Dobbs, late Provincial Commissioner for Nyanza Province. This practice of constructing sacred Groves to Mumbo and erecting idols is interesting since all the people who were questioned about this cult said definitely that such things had never been commanded by Mumbo himself. True, he had said that there were to be sacrifices made to him with dancing to the accompaniment of drums and bull-roarers (without musical accompaniment), but he meant them to take place in each home. No instructions had been given for groves or idols.

An extract from the report of the District Officer who found the idol is worth inserting at this point:—

" . . . .The meeting place of the cult consisted of a beautifully swept enclosure adjoining the High Priest's Home and capable of seating some two hundred people. From the next home to that of the High Priest ran a made path, four feet wide and trenched at the sides . . . . The enclosure was surrounded by a well-built dry stone wall. In the centre was a little semi-open hut about six feet in diameter, finished with white mud . . . . There was no door. It appeared symmetrical all round, thus:—

[346]

" In the centre of the hut was a phallic altar-post, bearing traces of blood-stains . . . . The High Priest's daughter produced some unpleasant animal relics from a hole in the wall in the enclosure. In the Western corner a bush plant (Nyalothkoth) had been planted. . . .

795 778 In the Eastern corner was a small length of inner wall covered with dry grass, from which a shrub was growing so as to leave a covered but hollow space between the walls."

795 778 231 The altar-post mentioned in the report and which is now in the Museum, is a piece of wood standing some 3½ to 4 feet high and about 5 or 6 inches in diameter. One end has been carved with the result that it appears to be an unmistakeable phallus. That this is intentional, however, has been strongly denied by all those questioned about it, and, from the manner of my informants, I am inclined to believe that what they say is true—as far as it goes, and for the following reasons. In every Luo home the cattle are tied up at night to wooden posts embedded in the ground. Each beast as a rule has a post—called in Dholuo, "Loch,"—to itself. Where the owner of [531] the home has an exceptionally fine bullock he marks it out for distinction by putting a metal bell—not unlike a Swiss cattle-bell—round it's neck and further he carves it an especially ornamental Loch. This carving is almost invariably phallic in shape, and I expect that the idol in the Museum was probably a loch uprooted from a nearby home.

795 778 The point which was stressed to me was that although nearly all carved Lochas appear to be undeniably phallic, yet this is entirely accidental and has no intended sexual symbolism or meaning whatsoever. It was just the custom to carve them thus.

174 851 Now I am prepared to believe that the phallic appearance of these Lochas is produced unconsciously and without sexual significance, but, considering the geographical origin of the Luo and further the nature of the Mumbo beliefs, I consider that it is more than probable that the Lochas in their present-day domestic capacity are the unconscious relics of phallic cults and practices handed down from unremembered antiquity, and have by now lost all their former phallic meaning. That they have been seized on as symbols in this religion is not surprising when one considers firstly their probable origin, which I have just indicated, and secondly the fact that the gospel of Mumboism in its promises of plenty without having to work for it (the phallus always having been the symbol of Fertility and Plenty) is typical of all phallic religions. If their choice of a phallus for a symbol is not an unconscious re-emergence of long forgotten rites, then it is an extremely interesting instinctive gesture that their choice of emblem should coincide with that of other and unconnected races who hold parallel beliefs.

795 174 It would seem then that Mumboism is a mixture of the old Luo religion of sun worship, and of an even older religion, long forgotten in the mists of Time and now reappearing in a new guise.

795 747 The prophecies of Mumbo having failed, the cult is dying out, especially in Central Kavirondo, though it appears to be rather more tenacious in South Kavirondo. Further, active discouragement by the Government and the work of the Missions will soon banish it

797

altogether. It gains very few new converts and nearly all of these are natives who have broken away from a native-run Christian Mission known as the Nomiya Luo Mission, but these are not very numerous.

In conclusion I would like to offer my explanation of the nature of the " Snake " which swallowed Onyango. One morning in April this year while at Asembo location, on the Lake-shore, I happened to look out towards Homa Mountain on the other side of the Kavirondo Gulf. About a mile from the mountain and over the lake hung low a small bank of clouds. It was about half-past eight in the morning. From the centre of the clouds, and reaching down tentatively to the lake, twisting and swaying, hung a water-spout. The distance, some fifteen miles, made it difficult to estimate its height, but I think that a fair guess would be from 350 to 400 feet. I turned to my interpreter and said, " What do the wata make of that?" and he replied, " Oh, they say that that is the great snake Mumbo!"

795
821

795
778 In the Eastern corner was a small length of inner wall covered with dry grass, from which a shrub was growing so as to leave a covered but hollow space between the walls."

795 The alter-post mentioned in the report and which is now in the
778 Museum, is a piece of wood standing some 3½ to 4 feet high and about
5 or 6 inches in diameter. One end has been carved with the result
231 that it appears to be an unmistakeable phallus. That this is intentional, however, has been strongly denied by all those questioned about it, and, from the manner of my informants, I am inclined to believe that what they say is true—as far as it goes, and for the following reasons. In every Luo boma the cattle are tied up at night to wooden posts embedded in the ground. Each beast as a rule has a post—called in Dholuo, " Loth,"—to itself. Where the owner of
[531] the boma has an exceptionally fine bullock he marks it out for distinction by putting a metal bell—not unlike a Swiss cattle-bell—round it's neck and further he carves it an especially ornamental Loth. This carving is almost invariably phallic in shape, and I expect that the idol in the Museum was probably a loth uprooted from a nearby boma.

795 The point which was stressed to me was that although nearly all
778 carved Lothes appear to be undeniably phallic, yet this is entirely accidental and has no intended sexual symbolism or meaning whatsoever. It was just the custom to carve them thus.

174 Now I am prepared to believe that the phallic appearance of these
831 Lothes is produced unconsciously and without sexual significance, but, considering the geographical origin of the Luo and further the nature of the Mumbo beliefs, I consider that it is more than probable that the Lothes in their present-day domestic capacity are the unconscious relics of phallic cults and practices handed down from unremembered antiquity, and have by now lost all their former phallic meaning. That they have been seized on as symbols in this religion is not surprising when one considers firstly their probable origin, which I have just indicated, and secondly the fact that the gospel of Mumboism in its promises of plenty without having to work for it (the phallus always having been the symbol of Fertility and Plenty) is typical of all phallic religions. law as titular owner of the whole herd. The scheme of division may be represented as in the diagram below. All other livestock is divided in the same way. The eldest son of the first wife must marry before any other sons can do so, and if the first wife has no sons the next must wait till there is no further chance of her bearing any. When the first wife dies, the second wife becomes chief wife of the homestead, but a first wife's full status can only be succeeded to when she is replaced by a sister and a new homestead is built. The property of a barren wife is inherited by a stepson who is adopted into her household to do the man's work in it.

CATTLE HERD

All herded together

Head of homestead = joint owners of all

1. *Cattle of the clan*
Entire property of homestead head.

Used to help sons or brothers' sons to marry, or to marry new wives for homestead head.

Residue ultimately inherited by the youngest son of the homestead, who also takes the father's share of cattle from any subsequent marriages of sisters.

All derived from the heifer and bull taken by the father at every daughter's marriage, and from their increase.

Milk from these used by the homestead head.

Cattle of the wives' house
Milk to delight, assist to equalities, etc., among own wives.

2. Cattle entirely property of the wives.

Ultimately inherited by youngest son of each house.

All derived from the heifer called *nak Anak* received by the mothers at each daughter's marriage, and from the heifer of *ariela* and bull settled upon a wife by her father at the end of her marriage ceremonies.

Milk from these used by the wives.

3. Cattle held for sons' marriages.

Any residue inherited by youngest son of each house.

All derived from the cattle received as daughters' marriages other than those specified under 1 and 2.

Homestead head has over all discretion in the original division of incoming cattle, and can persuade wives to give up cattle from category 2 to help stepsons to marry, and may by arrangement take an extra heifer from those received as a daughter's marriage, to complete the bridewealth of one of his other wives.

Succession to authority in the family, and also in the lineage, depends on a combination of three qualifications: primogeniture, personal suitability in character and wealth, and appointment by one's predecessor. Primogeniture is highly regarded and preferred, but is never an absolute rule. Whenever an eldest son is unsuitable, or another agnatic relative is clearly more suitable, the latter is chosen to succeed. But a successor must be named by his predecessor, and as a result of the strong common sentiments in family and lineage segments, the predecessor's appointee seems usually to have been the one whom the elders of the group wish to elect when they meet at the funeral of the predecessor to confirm his choice.

Ancestor worship is falling into abeyance among the Luo of today. All those who go to school become at least nominal Christians, and this affects most of the young, while the old are becoming diffident in the performance of rites which no longer command universal respect. The spirit shrines which used to be placed between the first and second wives' huts are hardly seen today, nor the three stones which used to stand before the spirit shrine, with the stone of sacrifice buried beneath (see

HOMICIDE AND SUICIDE AMONG THE JOLUO OF KENYA

G. M. WILSON

101 The Luo ("Jaluo," singular; "Joluo," plural) are unique in that they are the only Nilotic speaking people in Kenya. Their place of origin is the Nile Valley; through the centuries by gradual expansion by war and peaceful penetration, they migrated up the Nile Valley, through Uganda, into Kenya, along the shores of Lake Victoria. The term Luo means "swamp" and Joluo "the people of the swamp." Through their migrations they have left behind other Nilotic groups in Uganda and in the Sudan.

131 The Joluo are chiefly concentrated in Central Nyanza where over half a million of them are found today. There are, however, Luo pockets in North Nyanza and also in South Nyanza.

631 The Luo of Central Nyanza are divided into twelve tribal groups. Each tribal group, with a Government-appointed chief, today forms an administrative unit, a "Location," within the District of Central Nyanza. These administrative units, laid down in the early twenties, coincide fairly accurately with the former tribal boundaries and are accepted by the people.

614 Each Luo tribe can be described as a society of agnatic parallel lineages or clans, each tracing either real or mythical descent from a common eponym or descent through an adopted or affiliated family to the eponym.

614 178 The original form of the clan and lineage structure remains today in comparative purity. The Joluo people—although on the surface they have accepted Christianity—still retain the ceremonial, religious, and ritual aspects of their culture to a very large degree.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

group had less than three years' education and over half of the female group had less than two years' education. This pattern, however, as already indicated, is changing rapidly. The majority of the Joluo are nominally Christians, although half of those who called themselves Christians were polygamists. Historically, of course, all of the schools in Luo were Mission schools and therefore those who go to school tend to call themselves "Christians," and most of them in fact have a basic understanding of the Christian religion.

One aspect of Joluo life which has changed considerably is the tremendous increase in spatial mobility. Prior to European ascendancy, the Joluo did not move among the tribal units because of the continual wars between them. Moreover, banishment from the tribe usually meant death at the hands of the neighboring Nandi, Kipsigis, or Masai. Lately, however, the village census established that most Luo males had been out of their district and well over half had been to Nairobi or beyond. At any given point in time nearly one half of the adult male population is engaged in employment away from the tribal area. Nearly one half of the Joluo adult women in the sample, 40 per cent, had been outside of their district, although only 11 per cent had been to Nairobi or beyond. It is the custom, therefore, for married men to migrate for labor and to leave their wives and families in their family locations to cultivate the gardens.[1]

HOMICIDE AMONG JOLUO

The Nilotic Joluo regard violence as an unnecessary loss of control, or at best a calculated necessary last resort to secure

[1] Professor E. E. Evans-Pritchard has written a study of the Luo in his "Luo Tribes and Clans" (*Rhodes-Livingstone Journal*, No. 7), and description of the marriage customs of the Luo in his "Marriage Customs of the Luo of Kenya" (*Africa*, Vol. xx, No. 1, 1950). Dr. A. Southall has published a memorandum entitled "Lineage Formation among the Luo," Memorandum xxvi, International African Institute, London, 1952. My own work among the Luo, *Law and Custom of the Joluo People of Kenya*, is forthcoming.

159 762 where he was headmaster. His final act was to write to all those involved in this series of incidents, which had taken nearly three years, to the effect that his daughter had killed him, that shame was brought to his clan and lineage, and that the liaison she had formed with Okare would end in disaster. He swore he would return in spirit to ensure that the marriage would end in failure.

159 762 568 747 It can be seen from this case that the difficult transition faced by even the most educated Christian Jaluo is complicated by the intense residual customary law and the attitudes of the people regarding the authority of a father and the duty of his daughter to this authority. The father in his case was a well educated, highly respected, important person in his district. The daughter, by her behavior, had humiliated him and he took recourse in indigenous rules and beliefs to solve his problems. They were initially successful. In the end, however, the threat to his status as a Christian of the fact that he had married his daughter by force to a Christian who was already married and therefore a bigamist in the eyes of the Church, brought shame and disaster to his social position as a Christian headmaster. His final act, however, was typically an indigenous one. He would not face the shame and humiliation brought to him by the course of events, so he took refuge in traditional recourse to suicide as a curse to the future happiness of those whom he thought had caused his grievance. To the end, therefore, he struggled to obtain the best of two worlds.

FEMALE SUICIDES

762 The most common cause of suicide among females is domestic quarrels and, coupled with that, the fear of physical violence from their husbands. Secondly, jealousy between co-wives; thirdly, the result of extreme grief, and finally, illness.

In the first category, out of the thirteen cases recorded from our sample, seven were of the domestic quarrel type. Of these, one was complicated by a curse from the husband, another

20:Ominde I-5 (ca. 1948) 1952

I

INFANCY AND EARLY CHILDHOOD

Feeding

Under one year. For the first month of a baby's life its chief food is its mother's milk. But when the mother's milk is insufficient, gruel may be given as early as at two to three weeks old. Although cow's milk is now sometimes used instead of gruel, it is still chiefly regarded as a modern introduction by the missionaries in an effort to promote infant health.

Between the ages of one and three months, gruel and breast-feeding play about equal parts. When the mothers go out to work, suckling tends to be limited to mornings and evenings. The average age at which babies are given gruel is one month. From the third to the sixth month milk from the breast and gruel continue to form the child's main diet, but after this, gruel begins to prevail over breast-feeding. Although maize flour is occasionally used in the preparation of gruel, the usual flour for this purpose is obtained from sorghum and eleusine, a species of millet. Whenever possible a little sour milk is added to the mixture. Between five and six months certain children have frequent tastes of adult food given to them by their nurses.

Although nurses are allowed to give gruel to the children, difficulties in handling a baby sometimes result in under-feeding, which is often made worse by the low food-content of the gruel itself. Through training by nurses, babies are accustomed to adult food before their mothers actually give it to them, so it can happen that

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

over 3,000 people are spraying; here, with sixteen times the population, not 500 are. In the whole of Nyanza, with its 900,000 families, we have only sixty-seven Sahiwal bulls.

'On cattle, most of them won't budge. For instance, a man's prestige is somehow linked with that of his bulls, and they are most reluctant to castrate anything. Pioneers who try improved methods are unpopular and their neighbours are apt to gun for them; one man, for instance, had his pigs burnt alive. Still, we plug on. We have controlled rinderpest, if not East Coast fever—every year we give about 200,000 rinderpest inoculations. We export half a million hides and skins and are trying to improve their quality.'

It is perhaps worth noting that crops, whose improvement is considerable, are grown by women, but livestock is the exclusive concern of the men.

'In the years ahead,' this rather disillusioned vet concluded, 'we have only got to get across two basic principles: that a cow wants food all the year round, and that a calf needs milk. But it will take another twenty years before we make any real dent in Nyanza.'

On the other hand, some things unexpectedly catch on. A district officer who had seen fish-ponds in Malaya made half a dozen and stocked them with tilapia. Local people observed the ponds and, without any serious propaganda, dug others like them. Now there are over a thousand in Nyanza. They cost nothing, the Government provides free fingerlings and is full of plans for fish-ponds everywhere as the basis of a small industry.

V

Maseno is a dynamo of education. It was started by the Church Missionary Society. 'The general plan of campaign was based on the model of Iona,' wrote the Rev. John Willis, later Bishop of Uganda, who with Bishop Tucker chose the site in 1904. On 14th January, 1906, the first resident missionaries, Mr. and Mrs. Hugh Savile, moved in—there was not much to move into, merely a grass hut under a tree that housed both the Saviles and a primitive dispensary. Nearly

21:Huxley Q,T-5 (no date) 1960 FL11 Luo FL11

fifty years later their son, Mr. Paddy Savile, after many years' service in Tanganyika, was to become Chief Agriculturalist to the Government and help to make a path for Progress through the land of his birth. Maseno mission was envisaged as 'a Christian base from which the Gospel might be carried far and wide into the surrounding country, with a school for the sons of Luo chiefs at which future leaders of the country would be trained in a Christian atmosphere.'

Four small boys called Ondiso, Odindo, Owiti and Orua were drafted from Kaimosi to form a nucleus and every 'chief' was asked to contribute two sons. 'Chief' was an arbitrary term, and the leading Luo objected strongly to the disappearance of their sons, probably regarding it as another form of slavery. In those days the Luo went stark naked, used beads or hoes for currency, and prized most highly the black ostrich feathers which warriors wore as head-dresses.

'In five years' time a hundred small boys from the school were sent out, two by two, for a fortnight at a time, to teach in Kisumu and in the villages. Then they came back to Maseno for a month for further teaching. In this way the original Iona idea began to be realized and Maseno became a base of Christian influence.' Bishop Willis developed this idea in a letter: 'It affords a shelter amid a sea of temptation; it makes Christian teaching applicable and Christian living a possibility.'*

So from four small and doubtless bewildered boys under a tree, Maseno developed until by the time of its golden jubilee it embraced primary, intermediate and secondary schools, a teacher-training college, a Jeanes school for adult education, a college for agricultural instructors and veterinary scouts. Even the girls had by this time been included, although their education for years lagged far behind that of their brothers.

At the time of my visit this part of Nyanza was a-buzz with rumour and diatribe, for the District Council in Kisumu had just been dissolved by Governor's decree. To balance the official line on this, I asked to meet a firebrand or two, and everyone agreed that Maseno was the place for a crackle of

originally came from the north-west. I imagine that the original possessors of these beads had considerable settlements in the neighbourhood of the Mongalla Hills, and that beads were continually being lost in the fields, and now when a heavy thunderstorm comes it washes some of the surface soil away and exposes an old bead now and again. The supply of the blue Nyo-Lwo beads is of course quite inadequate for the population, and many make up for the scarcity with the ordinary blue Albert bead.[1] Occasionally these ancient beads are green and yellow, but the usual colour is blue.

The Jo-Luo have a curious habit of shaving curved patterns on their heads (Fig. 11).

FIG. 11.—ITEM OF THE HAIR OF A BOY'S HEAD; SHAVING HOW THE PATTERN IS MADE.

The young men often wear an armlet of cylindrical wooden blocks on the upper arm; the wooden blocks are coloured red with oxide of iron. A band similarly ornamented with wooden blocks is often worn round the forehead. Some of the older men wear the curved canine teeth of a hippo on the forehead. The teeth is ground down laterally till it is only about one-eighth of an inch in thickness; others wear the teeth of a wart hog stretched to a necklace.

The Jo-Luo have a curious habit of standing on the top of an ant hill or in some prominent place on one leg with the foot of the other foot resting against the knee, reminding one of the attitude adopted by a stork; they will remain in this attitude quite comfortably for a considerable time. This habit is I believe characteristic of the Dinka and others of the tribes on the Nile south of Fashoda.

Miscellaneous customs.—If a person shuts the door behind him when he leaves a house, people at once say he is a witch doctor. If a wife does this to her husband, the husband will not enter her house again until she fetches a goat from her father and kills it. Similarly if a man is the culprit he has to kill a goat to avert the ill luck. If a house is struck by lightning and anybody is killed inside, the head of the village walks three times round the house with a red rooster and the house is then broken up and the wood utilized for any purpose.

Witchcraft, etc.—It is believed that people are killed by witchcraft; the person possessing the medicine has only to show it to a person in order to kill him; to save the person bewitched it is necessary to catch the wizard and to bring him to the patient and he can remove the spell, and the wizard has to pay a fine; this class of medicine man does not hide himself. There is a deeper kind of witchcraft which is only practised at night and with great secrecy. It is called *Juokkingo*, among the Gonl tribe many of the clan previously referred to who forge iron possess these powers.

[1] With the kind assistance of Mr. C. H. Read, of the British Museum, I examined the collections of beads at the Museum from various parts of the world, and I found yellow and blue beads of the exact colour and shape among the Egyptian antiquities and paper beads identical in appearance to the Nyo-Lwo both from ancient Egypt, and also from excavations made on the site of some buried cities in Babylonia.

622
438

When a chief dies the son chosen by the chief succeeds him; the successor is chosen as a rule some years before the chief dies. The successor will however divide the private property of his father with his brothers like anyone else.

Religion.—They call the Divinity by the name Chiong, which is the sun; when a man comes out of his house in the morning he spits to the east and in the evening he expectorates to the west. If the sunset is extremely red it is said to be a sign that an important man will die in the tribe. They believe that the spirit of a man goes upwards at death.

B: Hobley G-5 (ca. 1906) 1903 FL11 Leo FL11
Bantu Kavirondo FL11

B 628 suffered an injury at the hands of certain other members of his clan, *e.g.*, has had his wife enticed away or had a cow stolen, he will often proceed to the territory of a neighbouring tribe and lie in ambush, attack and spear the first passer by, likely to fall an easy prey, and will then return home.

In a few days it will leak out that one of the "Wa-so and so" has done this, and the clan of the murdered man will up and wage war with the clan of the murderer, who hopes to obtain his revenge vicariously in this manner; latterly, it is said, it has been done in the hope that the administration will be induced to punish the clan, and, incidentally, the man who has wronged him.

As a variant of the same line of conduct during the last few years, several cases of suicide have been brought to my notice.

B 782 For example, in Nyde district a young man one day had a violent quarrel with his own mother while cultivating, and eventually beat her with a stick. She ran crying to a village near by, and one of the elders came out and gave the young fellow a thrashing; to every one's astonishment the young man hanged himself that afternoon, and the people of the vicinity told my agent, who went to enquire into it, that he had committed suicide so that his blood relations might lay his death at the door of the elder, and thus start a blood feud against him. Word was, naturally, promptly sent forth that such a procedure would be strongly discouraged, and the incident apparently closed.

MISCELLANEOUS CUSTOMS AND BELIEFS.

L 821 The Ja-Luo believe that the sun goes back to the east overhead during the night, hidden behind the heavens. They use the word *Chieng* indifferently for sun and the Deity. They do not associate the daylight sky with the light of the sun, but look upon it as something quite distinct, and asked what became of it at night. It is known by the term *Polo*. They professed the belief that Europeans were the children of the sun.

L 821 941 They believe that menstruation is caused by the new moon, and also that a woman can only become pregnant at the time of the new moon, and generally that the moon has a great deal to do with the occurrence.

During menstruation a woman does not cook food for others, but merely her own food. She performs all other work as usual.

L 372 The people have no ceremonies connected with fire, such as the extinguishing of all the fires at a certain time, and the relighting with certain rites.

B 845 846 893 Among the Awa-Wanga, many believe that within five or six days of the birth of a child the parents must cohabit, or the child will die. After the birth of twins, the parents are secluded for from twenty days to a month; at the end of the ordained period the brother of the man then formally opens the door of the hut, and the couple can go about as usual. This seclusion of the male parent is probably an attenuated relic of the "*couvade*" custom.

altogether. It gains very few new converts and nearly all of these are natives who have broken away from a native-run Christian Mission known as the Nomiya Luo Mission, but these are not very numerous.

795
821

In conclusion I would like to offer my explanation of the nature of the " Snake " which swallowed Onyango. One morning in April this year while at Asembo location, on the Lake-shore, I happened to look out towards Homa Mountain on the other side of the Kavirondo Gulf. About a mile from the mountain and over the lake hung low a small bank of clouds. It was about half-past eight in the morning. From the centre of the clouds, and reaching down tenuously to the lake, twisting and swaying, hung a water-spout. The distance, some fifteen miles, made it difficult to estimate its height, but I think that a fair guess would be from 350 to 400 feet. I turned to my interpreter and said, " What do the natives make of that?" and he replied, " Oh, they say that that is the great snake Mumbo!"

241 comes next, but in cotton soil, there is further preparation by breaking up the clods, getting a fine tilth. This is called " buon." I well remember my surprise, and critical attitude, when first I noticed that sowing was done without any attempt being made to break up the rough grass-matted clods. However, the crop, which happened to be " bel " or millet, which resulted from these primitive methods, was, a heavy one. I was told that the clods afforded protection to the young seedlings.

With regard to the sowing or planting three terms are used. Broadcast sowing, as of millet, simsim and beans, is called " chwoyo " or " ludo." The planting of each seed individually, as with maize, is termed " komo," while the planting of cassava and sweet potatoes is known as " pidho."

24 Under the system now fast dying out, sowing was surrounded by
805 many taboos. First of all, was the knowing the time to sow. In
a normal year there are two sowings, one in the early part of the
●821 year, February or March, and one during the shorter rains about September-October. The slower growing crops were put down in the spring, and the quicker crops in the autumn. For the spring sowing guidance was sought from the stars. Amongst a people who had no names for the months of the year, natural phenomena had to be relied upon. These the stars supplied, and especially the constellations of Orion and the Pleiades. These two constellations are called by one name " Yugini " by the Luo. They further differentiate by calling the three stars of Orion's belt, the " chuo " or " men," and the cluster of the Pleiades the " mon " or " women." (The men are obviously polygamists.) When the time of the year comes round during which these stars are observed shortly after nightfall, to be about midway between the zenith and the horizon, then they know that sowing time has arrived. No matter how good the rains may have been before these stars reach the traditional position none must sow, and, conversely, if rains do not come by the time the stars say that sowing ought to be done, there are dismal forebodings about the crop. The Luo say that if the millet (their main food crop), has not flowered by the month when these stars dip below the horizon shortly after nightfall, then there will be a poor harvest and scarcity of food.

241 Other natural phenomena which guide them are birds. There is
825 a bird called by the Luo " Ondiek ti oyieng " (" the wild beasts are well fed ") which has a very monotonous three note cry. Some Europeans call it the brain fever bird, from the deadly monotony of this call. The Luo have given words to this cry " Dak tu kom " meaning " Aren't you going to sow to-day." There is another bird, called " Oliech ga apol " which follows behind the digger for the insects turned up with the soil. The presence of these birds is held to

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

husband and runs away, the amount which he has already paid on her behalf is returned and the marriage is broken off. If a woman finds herself unmarried after a long period, it is customary for her to go to a chief or a rich man and state that she has come to stay and cook for him. In such case she is usually taken to wife, but a very small complimentary present is paid for her. Chiefs may have from ten to forty wives. The Ja-luo are, generally speaking, very moral. They do not intermarry in

the same clan, but a man may marry the daughter of one who bears the same name as himself.

The Ja-luo believe in a *supreme God* whom they call "Chieng." This, however, is the same name as the sun. When a man comes out of his house in the morning, he spits towards the east, and in the evening he spits towards the west. If the sunset is extremely red, it is said to indicate the approaching death of an important person. They believe that after death the spirits of the departed go up to the sky. If a hailstorm occurs, no one goes to work in the fields on the following day. Shooting stars are said to be a sign of war. They believe that people can be killed by witchcraft, and that a wizard has only to show "medicine" to a person

231 Old cows which have stopped producing are usually killed and their meat exchanged for millet or maize which in turn is bartered for new young heifers, bulls, goats or sheep, or if necessary used for consumption. The same applies to oxen although these are usually exchanged directly for other stock. A heifer is usually worth two bulls or young oxen. The special oxen used by their owners as companions when they attend funeral mournings are seldom exchanged, but are slaughtered when they get old, the owners preparing special feasts as a tribute to their past service. A young man who has ridden a special ox at funeral dances does not eat the meat when the ox dies as a result of disease or accident. These "companions" are usually honoured by having bells fixed on special leather straps fastened around their necks. Some he-goats are also so honoured. The ringing of these bells will sometimes stop hyenas from entering the kraal and may help in tracing animals when grazing in bushy country. The ears of the owners are usually sensitive to the sound of the bells of their own oxen.

234 The Luo do not like polled cattle because some of them believe that such animals are unlucky. They say that if a polled animal is paid as part of a dowry the woman is likely to be sterile. They are very fond of oxen with long horns or those with peculiarly or funnily placed horns. During drinking parties the owners of such oxen "show off" by placing their arms in different positions to demonstrate the directions of the horns of their oxen. This performance is a sign of wealth because the average man does not possess a number of oxen with abnormally-placed horns. Long-horned cows are not of special value. The horns of dangerous animals are cut so as to reduce the risk of people and young animals being horned.

Beautifying animals by branding which is practised by some African tribes is not favoured by the Luo. The only method that is used to increase the natural beauty of cattle, especially bull calves, is to trim the ears. Trimming is, however, also done as a treatment for east coast fever because in this disease the animal appears dull and heavy as if suffering from headache, and the Luo believe that by letting a little blood from the ear the headache is eased.

231 Luo cattle-owners do not usually go in for special colours, but there are some colours which are considered objectionable. 232 Pure white is not liked because white animals are usually susceptible to skin diseases, accidental skin lesions and to marking by tick-bites which usually remain permanently conspicuous. Another objectionable colour is striped, dark, dull-brown. Animals with these mixed colours are not accepted for dowry because the disagreeable colours may cause disagreement during the arrangement of the marriage or between the wife and her husband. Brown is unanimously favoured because it is considered resistant to skin diseases and accidental injuries.

Black and white or red and white are favoured in oxen used as companions during funeral dances and other ceremonies.

TREATMENT OF ANIMALS.

Although the Luo are ignorant of the use of specific drugs for the treatment of different animal diseases, yet, when an animal is suffering they make keen attempts to cure it. As a result of such trials, cures have been reported in east coast fever, anthrax, blackquarter, mange, etc. Sometimes the treatment of one disease is so complicated that it is impossible to tell what agent may have been effective. It is clear that in some diseases animals may recover after empirical treatment. In the case of east coast fever, the treatment consists of cutting the ear, cauterising the glands and pouring into the nose a liquid infusion of a plant known in Luo as *nendewat*.* This drug causes a great deal of sneezing and is, therefore, said to free the blocked-up and congested sinuses. It is generally believed that many animals are saved by the use of this drug.

The Luo believe that they cure blackquarter by bleeding and by cauterising the affected quarter or even the whole body. Nowadays, some people who can procure potassium permanganate make large incisions of the affected part and rub in crystals or a saturated solution of the drug. Mange in goats and dogs is cured by washing the animals with tobacco infusion and the urine of cattle which has been stored for a few days. There are several drugs which are believed to be quite effective in expelling retained foetal membranes.

It is quite certain that the Luo have no method of immunising animals against diseases.

CHAPTER III.

Native Tribes of Kavirondo.

101 The *generic* name used of these peoples by themselves is *Ja-Luo*. The Bantu Kavirondo people call them *Awa-Nyuro*. A very common term for them is *Wa-Nilo*.

231 *Modes of subsistence.*—They all live by agriculture. They reside in fixed
291 villages of from ten to fifty huts. Nearly all the villages are surrounded by
301 euphorbia hedges; formerly many villages had mud and occasionally stone walls, but this custom has died out. They breed cattle, sheep, goats, and fowls.

[224] *Hunting and fishing.*—They dig pitfalls for elephants and also spear
226 elephants. They catch large quantities of fish in the Lake Victoria Nyanza by means of large conical wicker traps "*dowo*." The process is as follows:—They have two enormously long ropes; one end of each rope is secured on shore, and the ropes are then paid out into the lake, one rope floats on the surface and from it hangs a fringe of papyrus stalks; the other rope is a ground rope, and is weighted with stones, and the two ropes are connected at intervals. By means of canoes these ropes are gradually brought round in a semi-circle the size of which gradually decreases. The fish rush shorewards to escape from the drawing in of the net, and rush into the mouth of the big wicker traps which are placed in a row in the shallow water near the shore. At the same time the women walk up and down dragging smaller meshed traps in which they collect myriads of tiny fish the size of a sardine. They fish a great deal at night by torchlight. They state that they get the best hauls of fish after rain; in the dry season they catch
[228] comparatively few. Rafts of ambatch wood are used for laying out the net (ambatch is a very light spongy wood growing on the lake shore; it has a prickly
[438] bark). They split and dry large quantities of fish and carry it inland from the lake for considerable distances to sell for grain.

227 Lines and hooks are also used to a certain extent by the Nyakach people and
601 others. The people bordering the lake possess a few dug-out canoes and also a few of the sewn canoes bought from Baganda or Banga.

441 *Bridges.*—They build rough bridges of timber across the rivers when in flood, but not suspension bridges like the North Kavirondo.

264 *Cooking, etc.*—They cook in earthen pots inside their huts, and also in the
252 verandah of the huts. All cooking is done by women. The food is served up in little baskets. The father eats with his sons; they generally eat in a little separate hut with open sides built for the purpose. Women eat separately and inside the house.

372 *Fire.*—They know the use of firesticks but rarely need them, as they can always obtain a glowing ember from one or other of their neighbours.

Basta Kavirondo FL4
Nandi FL3

B 824 778

The word *Mavundo* in Lo-Wanga means peace, and when peace is made between two tribes, the ceremony, if possible, always takes place at the foot of one of these trees, as the tree is a great peace charm, and the dog, which is slaughtered as part of the ceremony, is generally tied by its neck to the tree.

B 825 751

Among the Awa-wanga, if a man kills a python, it is believed that the snake will return, or possibly that its spirit will return and afflict his children with blindness. Prompt measures must, therefore, be taken to avert this disaster, and he accordingly measures the length of the reptile, and not later than the day following, hews a path through the grass near his village equal in length to that of the snake, kills a white fowl, then sprinkles its blood in the clearing and also pours a little *ubusa* or *wimbi* gruel there too; this acts as a charm to render the python's malignancy futile. Even if a python is seen only, it is considered safe to go through this ceremony. The next child that is borne to the man after killing a python is called *wamoondo* if it is a boy and *wamoondo* if it is a girl; (*mulo* is the Lo-Wanga word for python).

B [553]

B 766 [824]

A most extraordinary custom, which holds among the Awa-wanga and may be mentioned under the present heading, is that if a young girl, a virgin, dies, her female relatives, whose duty it is to bury her, artificially deflower the body before burial; this is always done by the forcible insertion of the pointed bulb of *epidendrum* which cover the immature flowers at the lower end of a growing bunch of bananas. If this is omitted, it is believed that the sisters of the deceased will not be found to be virgins on their marriage; this would be considered somewhat of a disgrace.

B [834]

B 171

It will be remembered that in Mr. Roscoe's account of the Baganda customs,[1] the flower of the plantain or banana plays a certain part in the ritual which is gone through upon the birth of twins, and is there, I believe, used as a symbol of fruitfulness or plenty; possibly a similar idea may, in the past, have had some connection with its employment in the instance now described.

L 765 766 824

There are two curious customs, in which the thorn of the acacia plays a part, which may, perhaps, be mentioned under the heading of charms. Among the Ja-Luo when a person dies, for days, perhaps months after, the whole village wails with great fervour, and at stated intervals according to the conventions laid down for the case. If, however, a barren woman dies, the people of the village at once commence to wail in the usual way, and the brothers and sisters of the deceased proceed as quickly as possible to the village where the death occurred. The first blood-relation of the deceased who arrives on the scene takes a sharp acacia thorn, sticks it into the sole of the foot of the corpse and breaks it off; immediately this is done all wailing ceases at once, nor is it renewed as in the case of an ordinary death. The origin and the object of this strange custom appears to have been entirely lost.

N 787 824

Among the Nandi, when a raiding party is being arranged, the *chemeron* (warriors) proceed to a *laibon*, or medicine man, on ox is killed and the *laibon*,

[1] *Journ. Anthrop. Inst.*, vol. xxxii, p. 25, *et seq.*

II: Herrmann M-9 (ca. 1928)1928 FL11 Loc FL11

§44 couple of women who have come to assist her, support her shoulders. If the woman is afraid or weak, somebody generally a strong woman is called to *thudyo* her, i. e. she puts her mouth close on the mouth of the patient, and blows her breath down the patient's lungs in order to increase the pressure.

No sooner the child is born or one of the assisting women run out of the hut to pull out of the roof a piece of kaffircorn stalk, which is split leaving a sharp edge. This is used to cut the babe's navel after it has been tied off.

[30] If the babe is a boy the Kaffircorn stalk is pulled out of the roof at the side of the fire place of the hut *(Ker omach* — brilliant side facing the hut). If it is a girl, the stalk is pulled out *Ker ahong* — the right hand side. Compare: Burial of children (p. 274).

When the afterbirth has come out the mother takes the child on her lap, whilst somebody runs for a drop of fresh sheepmilk — otherwise never consumed — which the child has to drink. Not until the child has swallowed a drop of this will the mother give the child suck.

§46 Immediately after the birth of the child the husband orders a goat to be killed for the mother, and the pot is put to boil, for the mother has a ravenous appetite. Now word is sent to her father, who will kill a goat for his wife, who comes to see her daughter, bringing some of the meat and fish along.

For no purpose except nature's call is the mother to leave the hut within 4 days, if the babe is a boy. Then she takes the child outside, and a little patch of hair is shaven above the ears of father, mother and child.

852. After 10 days a bull and a heifer are bled, meat and fish is cooked, simsim is pounded and mixed with rendered butter, and the fat of it is to provide a good bed for the inhabitants of the kraal later in the day. On that day the heads of father, mother and child are shaven clean. Then after the woman is smeared with butter and sprinkled with simsim seeds, armlets of a wild plant *(ochol)* are strung on plaited grass *(ogenge)* and creeping grass *(nuothono)* and [30] hung crosswise over the shoulders and under the armpits of the young mother. In the same way she is ornamented with cowrysheils, ordinary beads, beads of multicolular pieces of ostrich eggs *(rek)* and big iron beads.

When the woman is thus ornamented, a boy, her brother-in-law, is called [26] to hold the child. Now an old woman brings *owinjo* (= pounded simsim mixed with rendered butter) and cooked weeds. She kneads a mouthful of the food, making with her thumb a little pit in it *(athwenyo stongo)* which she fills with *owinjo*, then she puts it on the end of a wooden ladle, used in stirring the food, 4 times to the mouth of the mother. The 5th time she puts it with the help of the ladle in the mother's mouth, who is not allowed to touch the food with her hand. After she has eaten this one mouthful, another mouthful is given in the same way to her young brother-in-law who holds the child.

Then meat, fish, blood and other food is brought for the inhabitants of the kraal. That night the father and mother of the child sleep again together for the first time after the birth of the child *(ilgoto imbo nyathi)*.

If the babe is a girl the woman stays in the hut for 3 days, after which the child is taken outside and a little patch of hair is shaven also above

11: Herrmann 36-5 (ca. 1928)1928 FL11 Loo FL11

743 ock in the village and he withdrawn says that the sickness is due to neglect of
787 deceased's grave, and that they have to sacrifice a goat or a bull to propitiate him,
753 then they put some stalks round the grave again by way of a hut, in the doorway
of which they roast a chicken, and some blood of the sacrifice is put in a potsherd
and placed on the grave.

On the anniversary of the death or thereabouts beer is brewed again. Two
769 kwanzwe deceased's sons visit the witchdoctor, who tells him to sacrifice a special
782 cock, e. g. a big black one, or one with an extra toe, or one with very short legs,
273 etc. Until such a cock is found, as indicated by the witchdoctor, the beer will be of
no use. Then the chicken is roasted and eaten, except for one leg which is put on
the grave and covered with a basket. Now the *wanda* for the beer is carefully ground
and put to soak for fermenting. After twelve days the fermented *wanda* is roasted
and the next morning dried. Unground *wanda* is soaked in water, which is strained
off again, and the grain remains for 3 days in covered pots in order to sprout,
after which it is dried. When these ingredients are ready, then the next day another
visit is paid to the witchdoctor, who again orders a special chicken to be sacrificed,
this time e. g. a white one, which is killed and eaten in the morning. Now the
● [824 women and children of deceased only pick some *umbipala* of a certain wild plant
588] (*ombele*) which they string like beads on the stalk of creeping grass (*mwikuwa*).
These strings they put round their necks, and also round the necks of the water-
vessels with which they go to the well to fetch water for the further preparations of
the beer. The water is put out in the sun, and when it has become lukewarm, it
is poured on the fermented *wanda* in big earthen pots. Next day the sprouted
wanda is ground and put in the beer-pots too. The following morning early the
relations put some of the beer, now ready, in a small vessel, which they put on the
grave of deceased, with a reed in it, after which the people of the village take some
of the beer and drink it. Presently they bring a cock which they suspend by its legs
alive in the gateway of the kraal together with some secret medicine, and it remains
hanging there till sunset. From 8 o'clock in the morning onwards all the relations,
friends and neighbours come to partake of the beer, which is put in an enormous
earthen pot (*ndoka*) in an open space outside, each visitor bringing his own reed
for sucking the beer. Nobody can enter the kraal that day except by the gateway
where the chicken is hanging, all the other entrances being closed up. And the
chicken is hung in such a way that anyone entering has to touch it. Suppose a
[754] person with an "evil eye" would enter for the purpose of bewitching somebody there,
the medicine would start working on him, and he would leave the place with sore
eyes, which would cause him much suffering. If this person, however, returns to the
village, and owns up that he came there to bewitch somebody, he will be asked to
spit on the ground, so that the person bewitched may not die, and doing so his
eyes will heal again.

Beer is supplied to anybody entering the kraal for three days at a stretch.
No food is cooked these days; if some food is brought from a neighbouring village
they may take it but otherwise they live on beer only. All the children of round
about, born about the time of persons death and called after him are carried by
their mothers to this beer party. Each mother brings a cooked chicken and some

buttermilk is used for making gruel which can be consumed by both sexes. Both buttermilk and fresh milk are used for cooking vegetables and fresh bovine blood for human consumption. The Luo do not slaughter their cattle for beef except for some special reason, for example, on the occasion of a special feast. The ordinary meat eaten is that of animals which have died as a result of disease or accident. If there is an outbreak of a serious disease and many animals die, their meat is made into biltong which can be stored for future consumption. Such biltong forms a very palatable diet when properly cooked with ghee. Girls do not eat the meat of cattle paid for their dowries.

Hides are used as sleeping mats, and for making shields, drums, sandals and special head-dresses on which ostrich feathers are fixed. Those of very young animals are used as clothes.

Cattle can be exchanged for millet or maize at any time, i.e., during famine or in good years; but cattle-owners tend to refuse millet or maize for their cattle after good harvests. This is one of the facts which support the argument of the Luo elders who prefer animals to crops. In exchanging cattle for goats and sheep, a bull is worth three to four goats and a heifer, six to eight goats or sheep. A goat or sheep is worth six to eight fowls.

The young men use young oxen for riding, and they sell heifers to buy buffalo hides for making shields or ostrich feathers for their adornment at funeral dances. Cattle accompany the mourners when attending funerals and, during inter-tribal wars, oxen were the companions of warriors on the battlefield. The horns make valuable trumpets and are used as containers for keeping powdered drugs. Tendons make strong strings for harps and bows. Cattle dung is useful for smearing houses and dry dung is good for the fire. Fresh blood as mentioned above makes a palatable food when mixed with milk and cooked. The scapula of small animals is used as a butter-scoop and for other domestic purposes. Hoofs are used for storing drugs and for running liquid medicines into the noses of both human and animal patients, e.g., an infusion of a plant known in Luo as *jandaruni** is given in this way to cattle suffering from east coast fever. The long hair of the tail is used for trapping birds. The scrotum forms a valuable pocket.

Goats' milk is the food of the herd-boys when looking after animals in the pastures. They add the juice of a fruit† to the fresh milk and after a few minutes the milk coagulates and is ready for consumption. Goat skins are worn by both men and women and goat's meat is eaten by both sexes. The goat is the animal usually slaughtered for female visitors such as mothers and sisters-in-law. The chief produce from sheep is mutton

*Dolichos sp. probably *D. Maitlandii*.
†Solanum sp. probably *S. incanum*, Sodom apple.—Editor.

When a cow calves about two days are allowed to pass while the calf is suckled before milking commences. The milk obtained from the cow during the first two weeks or until the umbilical cord of the calf drops, is all drunk by young men in the village. This milk is stored in a pot in which a little buttermilk, which has been treated with urine, has been placed. As mentioned before the Luo believe that drinking fresh whole milk is the cause of tapeworm infestation, and the buttermilk is added to the fresh milk so as to eliminate this danger. When the umbilical cord of the calf has dropped the woman who owns the cow is allowed to use the milk for churning butter. The roots of a plant known in Luo as obuuo is added to the churning calabash as a preserving agent because fresh milk is stored in the calabash for about twelve to twenty-four hours before churning. During the churning process a little bovine urine, which has been stored for a few days, is added to the milk to accelerate the formation and facilitate the separation of the butter. This urine is also believed to be a good preservative for both the butter and the buttermilk, which will be stored for use in cooking various kinds of food. On the day the first butter is made into ghee, a little of the ghee is fed to the calf and the rest eaten by a group of people in the house. The reason why a sample of the first ghee is given to the calf is not very clear; but some people say that it protects the calf from developing diarrhoea and indigestion when the later butter of the dam is boiled and made into ghee. They believe that otherwise the boiling of the butter during ghee-making would cause diarrhoea in the calf.

Milking is done twice a day, in the morning and evening, by the boys and young men. Girls, women and old men are only allowed to milk in homes where there are no young men. Before commencing milking, the calf is allowed to suck its dam for a minute. It is then tied in front of the dam while she is milked. After some milk has been drawn the calf is allowed to suck for another minute and then re-tied while more milk is taken. Finally, the calf is allowed to suck and stay with the dam for about an hour, after which it is separated from the mother for at least ten hours before the next milking.

If a cow is slow to wean her calf a method used for drying her off is to fix a muzzle (osembo) on which strong thorns are fixed around the mouth of the calf so that when it tries to suck, the thorns prick the dam and cause her to kick the calf away. Another device is to smear the teats of the dam with cow dung, the taste of which stops the calf from sucking.

If the calf dies, its hide is dried, folded properly and a little salt solution is sprinkled on it to make it taste pleasant when licked by the dam while being milked. Before milking, the teats are washed or cleaned with warm water to stimulate the milk flow.

Black and white or red and white are favoured in oxen used as companions during funeral dances and other ceremonies. 231 232

Treatment of Animals.

Although the Luo are ignorant of the use of specific drugs for the treatment of different animal diseases, yet, when an animal is suffering they make keen attempts to cure it. As a result of such trials, cures have been reported in east coast fever, anthrax, blackquarter, mange, etc. Sometimes the treatment of one disease is so complicated that it is impossible to tell what agent may have been effective. It is clear that in some diseases animals may recover after empirical treatment. In the case of east coast fever, the treatment consists of cutting the ear, cauterising the glands and pouring into the nose a liquid infusion of a plant known in Luo as *ponderuri*.* This drug causes a great deal of sneezing and is, therefore, said to free the blocked-up and congested sinuses. It is generally believed that many animals are saved by the use of this drug. 232 239

The Luo believe that they cure blackquarter by bleeding and by cauterising the affected quarter or even the whole body. Nowadays, some people who can procure potassium permanganate make large incisions of the affected part and rub in crystals or a saturated solution of the drug. Mange in goats and dogs is cured by washing the animals with tobacco infusion and the urine of cattle which has been stored for a few days. There are several drugs which are believed to be quite effective in expelling retained foetal membranes. 278

It is quite certain that the Luo have no method of immunising animals against diseases.

Finally, in desperation, his sons and a group of his *pakakuoro* consulted the head diviner, *jubilo*, to choose an auspicious day for the killing of the ex-chief and to collect the animals and materials necessary for cleansing after the deed had been accomplished.

The ex-chief was found and stabbed to death at the place named by the *jubilo* and his body was hidden in a nearby river. It was found several days later, and a witness was found who alleged that he came upon the group on the day of the murder in the act of disposing of the body.

Those who had had actual physical contact with the blood of the murdered man were cleansed as soon as they arrived home by the leading *jubilo* of the clan. He used a grey ash from burning the sacred *buowbuow* vine. The minimal lineage, *pakakuoro*, assembled at the village of the senior son, who was the head of the lineage segment, and who had struck the fatal blow. There the following cleansing ritual was performed: at about two o'clock the following afternoon, a black sheep and red chicken were slaughtered by the head of the lineage. The sheep and chicken were first prepared by the *jubilo*, who placed his medicines in the mouth of the sheep and of the chicken before the sacrifice. The *jubilo* cut strips of skin from the animal and wrapped them around the spear and knives used in the murder. The spear had to be destroyed at sundown because the victim was related to the spear clan of the tribe. The meat was divided on the lineage principle and consumed ceremonially. The meat of the chicken was eaten only by those who actually struck blows.

The purpose of these sacrifices was stated by the *jubilo* to "keep the spirit of the murdered man from doing evil to the clan." It also cleansed the bodies of those who drew blood so that they could now eat with their families and once more participate in the activities of the village and clan.

After the meat was eaten, those present held a meeting to decide which old woman should act as a wife to the ghost of

19:Wilson E-9 (ca. 1950) 1960
FL11 Luo FL11

762 159 [505] his mother and took the ox-ox by stealth. When the husband came to collect it for the Chief, he found that a large portion of it had disappeared. This caused a bitter quarrel between him and the boy's mother.

In fear of the consequences of what her son had done, the woman placed a rope, which was used for tying up one of her cows for milking, in a small basket and went out of the village as if to collect vegetables. She went to one of the largest trees in a nearby valley which was hidden from sight by thick bush and there hanged herself. My informant then described the scene as follows: "The first person who found the body cursed it very hard and, after having cut the rope, started mourning. The place was soon filled with people and some were asked [783] to bring hoes, axes, and pangas to destroy the tree. There and then people of the village and her lineage started their work and within a day the tree was completely destroyed and all the roots dug up from the ground and burned."

"When I asked why the tree was being destroyed," the informant went on, "the elders told me that it was being done to stop more people from hanging from it, for we Luo believe that hanging is inherited by different people in different clans. If a clan had not had a person hang himself before, it is difficult • [524] for one in that clan to hang himself or herself. If a tree on which someone had hanged himself was allowed to remain, it would drag other people to it for the same purpose."

The next case involves a curse as well as domestic trouble.

Suicide Case No. 17.

159 762 578 The husband of this suicide had been having considerable trouble with his cattle and many were dying from disease. The beginning of the illness coincided with the elopement of her daughter with a young man who had neither paid bride-wealth nor seemed likely to pay it. Her husband blamed his misfortunes on this incident and his suspicions were confirmed by

20:Ominde 1-5 (ca. 1948) 1952

this place they make regular visits to it. Thus the place used by the children for this purpose appears very insanitary. Furthermore, children are in this way exposed to the danger of attack from worms of various kinds. 863

Weaning

There are very few cases where children are not weaned against their will. The maximum period of suckling is determined by the date of the following pregnancy. Thus if the mother is not again pregnant a child is suckled for as long as it wishes. It is considered that once a mother is expecting another child the milk in her breasts naturally belongs to the coming baby and would be poisonous to the older child. It is also believed that children who are suckled when their mothers are pregnant waste away and eventually die if the feeding is not stopped. 862

Methods of weaning. Methods of weaning do not vary much between different mothers. First, the child may be persuaded that the milk is 'pus', and as such should not be taken. Certain children are deliberately disgusted and are weaned immediately in this way.

The second method involves smearing with the bitter aloe sap, or a substance which irritates the mouth, like pepper. Much pain is inflicted on children weaned in this manner, and no doubt psychological studies of these children would bring to light the tremendous effects created by different methods of weaning. [824]

Another method used is that of discouragement through fright. A mother may play on the sensory nerves of the child's face at night by touching it with grass, telling the nursing child that the grass is a caterpillar. As children are afraid of caterpillars this greatly upsets them, and the mother succeeds in severing the last physiological connection between herself and her [825]

S: Hobley G-5 (ca. 1900) 1903 FL11 Lan FL11
Bush Kavirondo FL4
Nandi FL13

Among the Bantu people each clan appears to have its own particular totem, and this may have given rise to their custom of exogamy, but in Nandi each individual is said to have his own totem irrespective of the clan. Practically the whole of the Nilotic group appear to have the same totems, but, in some parts, there are certain variations from what may be called the standard list of forbidden foods. Thus, although the exogamy which exists among the Nilotic Kavirondo may have originally arisen from totemism, the present survival of the belief has lost its original character.

In all the groups the totems appear to be animals, no example of a vegetable totem has been discovered.

The Bantu group use the word "*Muiro*" to denote the totem and, contrary to the usual belief, the eating of a totem animal is not thought to be followed by death, but only by a severe skin eruption; and if, by any mischance, the meat of the totem is eaten, the evil consequences referred to can be averted by making a medicine "*dawa*," extracted from certain herbs, and this extract is mixed with the fat of a black ox and rubbed all over the body of the person.

Among the Nilotic Ja Luo the totems are called "*Kwero*," and there is a long list of "*Kwero*" animals which are forbidden as food to both men and women; there is, however, an additional list of food that women must not touch.

Upon no occasion is the rule of the *Kwero* relaxed, but, curiously, the animals on this "*index superpiorius*" are considered malignant in their influence, and it is thought praiseworthy to kill them. Thus any "*Kwero*" animal can be hunted, with the exception of the crested crane (*Balearica pilicrispa*), which is, generally speaking, strictly preserved by all the Kavirondo. The Gumi tribe, however, do not consider it wrong to kill and also eat this beautiful bird. The Gumi, Lago, and Sakwa tribes can also eat the wild cat, called by them "*Oyoung*." The Ja-Luo often wear the teeth of the leopard and crocodile as ornaments, and the skin of the leopard and wild cat; this is not considered an infringement of the "*Kwero*" law.

Examples of the Totems of the Bantu Family.

Clan or Tribe.	Special Totems.
Kisumi clan of Awa Wanga	*Inhongo*, bushbuck.
Maraama and part of Tsuso and Isukha...	*Kuro*, waterbuck or *Ilulu*.
Awa-Gonya and Awa-Mwaki	*Lisui*, pigeon.
Awa Shakwi of Nyole	*Njofu*, elephant.
In Ketosh there are several, according to to the clan, but over a large portion the special totem is	*Mulungi*, a large black and white stork which appears in large flocks about November, it eats locusts.
Tasoni tribe (Ngaki section)	*Iswao*, reed buck.
Ithako, E. Tsuso, S. Kabras	*Inhongo* or *Nyuse*.
Probably the totem most common in Kabras is	*Mlimlolo*, white ants in the flying stage (but cooked). They can be eaten raw, but not when cooked.

The elephant, although looked upon as a totem, can be eaten without evil effects.

B 771 825 184

I omitted to mention above that the Kadimo people, who live on the Lake near the mouth of the River Nzoia, believe that they are descended from the python; these reptiles are looked upon as sacred and annual sacrifices are made upon a hill in Kadimo to the common ancestor. The Kadimo people are a Bantu tribe which has adopted the language of the Nilotic Ja-Luo, and it is thus the only Bantu tribe in the country which looks upon its totem as its ancestor.

N 771 825

Certain snakes, however, are looked upon as sacred animals among some of the Unyamwezi clans and it is highly probable that, as among the Kadimo, this is due to the belief that the snake was their common ancestor. Many Wanyamwezi consider it a deadly sin to kill a snake, and one, occasionally meets an individual belonging to one of these clans who is said to be immune from the effects of snake poison.

N 771 784

The totems of the Koromojo people who live north of Mount Elgon, are snakes, frogs, the monitor lizard, the hyæna, and the cheetah; they believe they will die

241 comes next, but in cotton soil, there is further preparation by breaking up the clods, getting a fine tilth. This is called " buso." I well remember my surprise, and critical attitude, when first I noticed that sowing was done without any attempt being made to break up the rough grass-matted clods. However, the crop, which happened to be " bel " or millet, which resulted from these primitive methods, was, a heavy one. I was told that the clods afforded protection to the young seedlings.

With regard to the sowing or planting three terms are used. Broadcast sowing, as of millet, simsim and beans, is called " chwoyo " or " ludo." The planting of each seed individually, as with maize, is termed " komo," while the planting of cassava and sweet potatoes is known as " pidho."

241 805 821 Under the system now fast dying out, sowing was surrounded by many taboos. First of all, was the knowing the time to sow. In a normal year there are two sowings, one in the early part of the year, February or March, and one during the shorter rains about September-October. The slower growing crops were put down in the spring, and the quicker crops in the autumn. For the spring sowing guidance was sought from the stars. Amongst a people who had no names for the months of the year, natural phenomena had to be relied upon. These the stars supplied, and especially the constellations of Orion and the Pleiades. These two constellations are called by one name " Yugini " by the Luo. They further differentiate by calling the three stars of Orion's belt, the " chuo " or " men," and the cluster of the Pleiades the " mon " or " women." (The men are obviously polygamists.) When the time of the year comes round during which these stars are observed shortly after nightfall, to be about midway between the zenith and the horizon, then they know that sowing time has arrived. No matter how good the rains may have been before these stars reach the traditional position none must sow, and, conversely, if rains do not come by the time the stars say that sowing ought to be done, there are dismal forebodings about the crop. The Luo say that if the millet (their main food crop), has not flowered by the month when these stars dip below the horizon shortly after nightfall, then there will be a poor harvest and scarcity of food.

241 ●825 Other natural phenomena which guide them are birds. There is a bird called by the Luo " Ondiek ti oyieng " (" the wild beasts are well fed ") which has a very monotonous three note cry. Some Europeans call it the brain fever bird, from the deadly monotony of this call. The Luo have given words to this cry " Dak tu kom " meaning " Aren't you going to sow to-day." There is another bird, called " Oliech ga apol " which follows behind the digger for the insects turned up with the soil. The presence of these birds is held to

241 826 indicate that sowing time is at hand. In the autumn, there is the ordinary African kite, which comes over literally, at times, in thousands, feeding in the air, and on the ground on the swarms of flying ants. Some withhold their sowing until these birds appear.

241 782 In exceptional cases an important sacrifice, called " bilo " was performed before sowing took place. If the " Jaduong' bilo " was warned in a dream of impending disaster to the coming season's food supply, he called the elders of the community together for the purpose of the ceremony. " Bilo " was performed to avert any disaster threatening the community. It was always performed in the early morning, before the cattle had gone out to graze. The present " Jabilo " in Sakwa location performed the ceremony of " bilo " in 1931 when the people of Sakwa had a boundary dispute with their neighbours of Asembo. He performed it again in the early months of 1933 to get rid of the locusts. It is natural that not a few in Sakwa attribute the absence of locusts this year to the effect of this ceremony.

241 177 [626] When the time was ripe for sowing, the " Mikayi " or chief wife of the head of the community, was always the first to sow. None dare begin their sowing until the " mikayi " had thus given permission. Any who were so bold as to begin before the " mikayi " were made to feel the displeasure of the community. As recently as 1931 I have known a man to come under discipline for sowing too soon. But what with the efforts of the Agricultural Department, pressing upon the people the wisdom of early sowing, together with a widespread knowledge of the names of the months, re-inforced by the rise of individualism accompanied by the breakdown of tribal authority, the influence of the " mikayi " is steadily waning. Amongst the more advanced sections of the communities it has ceased to exist, and they are no longer subject to discipline for early sowing. After sowing comes a pause, but not for long. About April weeding begins. This is shared in by all. Amongst the sturdier crops, it is done by the hoe, but in crops like the small millet, called " kal," the seed is sown too closely for there to be room for a hoe, so it has to be done by hand, the weeders squatting down on their heels and pulling up the weeds. This results in a much trampled crop, but it very soon recovers, and suffers no damage. In recent years the Administration has made great efforts to get people to eradicate the striga weed, called by the Luo " hayongo." This weed shoots up, curiously enough, after the customary weeding has been done. The Luo let it grow in spite of the fact that they know that land infested with it must be left for a term of years. I have over and over again tried to persuade them of the wisdom and benefit of getting rid of it, but to no avail. Anything which comes after the routine weeding has been done is allowed to remain.

this place they make regular visits to it. Thus the place used by the children for this purpose appears very insanitary. Furthermore, children are in this way exposed to the danger of attack from worms of various kinds. 863

WEANING

There are very few cases where children are not weaned against their will. The maximum period of suckling is determined by the date of the following pregnancy. Thus if the mother is not again pregnant a child is suckled for as long as it wishes. It is considered that once a mother is expecting another child the milk in her breasts naturally belongs to the coming baby and would be poisonous to the older child. It is also believed that children who are suckled when their mothers are pregnant waste away and eventually die if the feeding is not stopped. 862

Methods of weaning. Methods of weaning do not vary much between different mothers. First, the child may be persuaded that the milk is 'pus', and as such should not be taken. Certain children are deliberately disgusted and are weaned immediately in this way.

The second method involves smearing with the bitter aloe sap, or a substance which irritates the mouth, like pepper. Much pain is inflicted on children weaned in this manner, and no doubt psychological studies of these children would bring to light the tremendous effects created by different methods of weaning. [824]

Another method used is that of discouragement through fright. A mother may play on the sensory nerves of the child's face at night by touching it with grass, telling the nursing child that the grass is a caterpillar. As children are afraid of caterpillars this greatly upsets them, and the mother succeeds in severing the last physiological connection between herself and her [825]

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

524 *Games.*—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

727 Upon return from war about two out of every three cattle go to the chief; the chief then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the chief. A man who distinguishes himself in war is also often given a wife without payment.

262 *Food, etc.*—They eat practically all meat except that of the hyæna. Some young men eat leopard meat to make them fierce in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the [272 826] milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balaeriea gibbericeps*) is never killed or eaten by these people.

752 757 *Medicine, etc.*—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for ulcers and for purging, but not for diarrhœa. They also have medicine to avert [164] a threatened miscarriage. They profess to have a certain antidote for snake poison.[1] Venereal disease is practically unknown among the Ja-Luo.

789 Before going to war they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called *Ochola.*

728 *Peace ceremonies.*—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representative of each side takes out a piece and gives it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and proceed to sweep up the cattle boma; this will be accepted as a sign of submission.

231 *Killing animals for food.*—They kill oxen by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

428 768 *Succession customs, etc.*—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the wives, but the eldest son will probably take the youngest wife of his deceased father.

[1] After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Rendle, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Phytolacca Abyssinica*, is used internally, an infusion being made from the leaves. The other plant, *Ipomea palmata*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

753 The ghosts are usually those of grandparents who afflict
755 grandchildren because their father has failed to fulfil the
775 duties of a son to his father in his old age, either by direct unkindness or by neglect. The medicine-man will now order
769 a shrine to be built by the grave of the grandparent concerned, and the sick person's father offers a goat or a sheep at the grave, pouring out the blood as an offering upon the ground, and then eating the meat on the spot with a few relatives. The medicine-man is afterwards able to treat the sick man with reasonable hope of restoring him to health, because the offended ghost has now been pacified and will allow the sick man to benefit by the treatment. Sometimes sickness is transferred to another person by rubbing herbs over the sick man and burying them in the road for some other person to walk over and thus contract the disease.

828 **Ghostly possession.** Fits are supposed to be the manifesta-
775 tion of ghostly possession. They can often be overcome by giving the person warm blood to drink drawn from the veins
761 of an ox and by feeding the patient with a generous diet. During the time a fit lasts the man is held down, if he is violent, until the attack is over. Should a man fall into the fire during a fit, no help is rendered and he is allowed to burn to death, because it is said that the ghost has claimed him and would resent any interference and would affect the person who attempted to rescue the stricken man with a similar malady. A drum beaten near a person subject to fits is said to bring on an attack of the malady.

764 **Death and mourning.** When a person dies, his legs are bent up into a squatting posture, the right arm is raised under the head and the death-wail commences. The dead are not washed but merely have their ornaments stripped off; an ox or a cow is then killed and the body is wrapped in the skin and is stitched up tightly in it. The grave is dug in the house. When the body is laid in it, all the relatives stand round with their backs towards it and, at a given signal, they stoop down and with their hands scrape the earth into the grave without looking where it falls. After they have scraped in earth for some moments they walk out of the house, and the brother of

19:Wilson E-5 (ca. 1950) 1960

159 762 propriate prestige of beer parties and entertainment of his father's friends. On the day of the suicide, a group of the father's friends arrived at the village and the father asked his son's wife to prepare food and drink for them. This she refused to do, so that night he burned himself in his house, which the Luo believe brought ruin to the lineage and particularly to his son.

762 159 556 754 The next case is an interesting one because it illustrates an inherent Luo trait: the profound jealousy of anyone who is successful.

152 ## Suicide Case No. 9.

[587] The man who died was the brother of the suicide in case number 2, and took the latter's wives as leviratic wives. He also inherited his gardens. Shortly after this, he began to prosper phenomenally. The elders state that his cattle produced mostly heifers and some produced twin heifers. His crops were better than his neighbors, so they began soon to suspect him of witchcraft. In the space of a few years as his prosperity increased, he was more and more ostracized from the activities of the community. The final blow came when his own *libamba*, minimal lineage group, denied him entrance to a lineage sacrifice on the grounds that he was a witch. Ten years after his brother's suicide, almost to a day, he hanged himself.

When the elders were questioned as to whether or not this man was a witch, they replied that he could not possibly have been a witch, because he had committed suicide. If he were a witch, his medicine would have been so powerful that the effect of being ostracized by the community would not have bothered him at all, let alone driven him to suicide.

762 159 828 The Luo believe that those most likely to commit suicide are those who have descended from a lineage in which there has been a history of suicide. Case number 2 was the brother of case number 9, and case number 5 the son of case number

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

9. This example is used time and time again by the Luo to prove the point that the tendency to commit suicide is inherited or caused by ancestors.

I was able to follow one particular series of events in connection with Luo marriage laws and customs over three years, which began with the elopement of a girl and her lover, and ended in suicide only a month before this chapter was written.

Marriage in Luo is traditionally arranged by the family of the boy and the family of the girl. Not infrequently, because of debt or close friendship, a father may promise his daughter in marriage to a friend or creditor while the girl is still very young. He obtains the animals to which he is entitled (*dho i keny'*) approximately one half of the final bride-wealth, at that time and the girl is known as *nyar kiseke*, "the wife of the beer reed," as this arrangement is usually contracted and finalized at a beer party. So it was in the case we are about to describe.

Suicide Case No. 10.

The girl in this case had been promised by her father when she was but three years of age to a friend of his own age group. The father, Opio[2], was a well educated Jaluo, and by the time his daughter, Akech, was ready to be taken in marriage, at the age of 18, he was employed as the headmaster of an intermediate school administered by a local mission. He had insisted that his daughter be educated to enhance the final payment (*dho miluhini*) of her bride-wealth. She was, for an African woman, a well educated girl. She had received a secondary school education where, in this particular segment of the Joluo tribe, fewer than 1 per cent of the girls have had as much education.

Akech had been prepared for this event all her life. She knew her future husband and from a child, each time he visited

[2] All names are fictitious, but common Joluo names.

795
778

In the Eastern corner was a small length of inner wall covered with dry grass, from which a shrub was growing so as to leave a covered but hollow space between the walls."

795 778 231 The altar-post mentioned in the report and which is now in the Museum, is a piece of wood standing some 3½ to 4 feet high and about 5 or 6 inches in diameter. One end has been carved with the result that it appears to be an unmistakeable phallus. That this is intentional, however, has been strongly denied by all those questioned about it, and, from the manner of my informants, I am inclined to believe that what they say is true—as far as it goes, and for the following reasons. In every Luo boma the cattle are tied up at night to wooden posts embedded in the ground. Each beast as a rule has a post—called in Dholuo, "Loch,"—to itself. Where the owner of [531] the boma has an exceptionally fine bullock he marks it out for distinction by putting a metal bell—not unlike a Swiss cattle-bell—round it's neck and further he carves it an especially ornamental Loch. This carving is almost invariably phallic in shape, and I expect that the idol in the Museum was probably a loch uprooted from a nearby boma.

795 778 The point which was stressed to me was that although nearly all carved Loches appear to be undeniably phallic, yet this is entirely accidental and has no intended sexual symbolism or meaning whatsoever. It was just the custom to carve them thus.

174 831 Now I am prepared to believe that the phallic appearance of these Loches is produced unconsciously and without sexual significance, but, considering the geographical origin of the Luo and further the nature of the Mumbo beliefs, I consider that it is more than probable that the Loches in their present-day domestic capacity are the unconscious relics of phallic cults and practices handed down from unremembered antiquity, and have by now lost all their former phallic meaning. That they have been seized on as symbols in this religion is not surprising when one considers firstly their probable origin, which I have just indicated, and secondly the fact that the gospel of Mumboism in its promises of plenty without having to work for it (the phallus always having been the symbol of Fertility and Plenty) is typical of all phallic religions. If their choice of a phallus for a symbol is not an unconscious re-emergence of long forgotten rites, then it is an extremely interesting instinctive gesture that their choice of emblem should coincide with that of other and unconnected races who held parallel beliefs.

795 174 It would seem then that Mumboism is a mixture of the old Luo religion of sun worship, and of an even older religion, long forgotten in the mists of Time and now reappearing in a new guise.

795 797 The prophesies of Mumbo having failed, the cult is dying out, especially in Central Kavirondo, though it appears to be rather more tenacious in South Kavirondo. Further, active discouragement by the Government and the work of the Missions will soon banish it

845 smears a little clay in front of both ears of all the people who come to the feast, and
852 each of them do the same to the mother in return. All of them decorate their necks and waist with *bwombwe*, a creeping plant; then they start a most immodest dance;
[831 scarcely covered with their goatskins they simulate the copula, and the vilest songs,
[786 which no decent person could ever listen to. After the dance they enter the kraal
535] where food is ready. Then they have the beer. The relations of the woman stay over for the night, but all the others go home.

852 *Miend Kumu* is a similar dance, which is indulged in, when a woman has
831 given birth to a child, of whose conception she did not get aware of for some con-
535 siderable time. The people who come to this dance are far fewer; it does not last
786 as long either. In stead of a bull only a goat is killed by the relations of the woman, and some beer is brewn for the feast. Other ceremonies are the same as after childbirth under usual circumstances.

Betrothal and Marriage.

584 Before any other arrangements are made, a boy intending to get married tells his parents that he wants to look out for a partner through life. If the father has any cattle towards the dowry he will agree, and tells his son to make his choice, and inform her relations. When he has found a likely girl he invites a couple of friends, one of whom at least knows the relations of the girl well
[882] *(jatielo)*. With his friends he pays a visit to the kraal of the girl, and enters the *simba* i. e. the hut in which the boys of the kraal live.

No sooner have they entered the *simba* or the girls of the place go to greet the visitors, after which they bring them pipes and tobacco and go to fetch or prepare some gruel for them to drink. In the meantime the *jatielo* goes to the hut of the particular girl's father to tell him that a friend of his has come for his daughter. The father will inquire from the *jatielo* what kind of lad the boy is, whether he is of good family, whether he is not the son of a witchdoctor, whether he can pay a decent dowry, ect.

If the father agrees the *jatielo* goes back to his friends in the *simba* and reports that the father is willing, whereupon the boy proposes to the girl. There and then the girl decides whether she agrees or not. If she does not want the boy, then all is finished and visitors go home at once. If she agrees, they stay for the night. They sleep in the *simba* seperately together with the other boys and girls.

583 Then, in former years, in the early morning the visitors would catch the girl after she had left the *simba*, and take her to her fiance's village *(mako)*. On account of a government regulation, by which the dowry is now more or less fixed, this practice is no longer adhered to.

583 The boy and his friends go home. He informs his parents, who next day
585 send the *jatielo* bach with somebody else to pay the first instalment of the dowry, usually 2 or 3 head of cattle. They stay over the night, and in the morning they catch *(mako)* the girl, for she pretends not to like going along. After they have had some gruel to drink, the boys who brought the cattle more or less drag her out of the kraal. The girls from her village strip her absolutely naked, and the boys from there follow those who fetch the girl to take from them some of their orna-

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

allow a man's head and shoulders to enter; the roof is of grass. Outside these again is the circle of huts, strongly built of sticks and grass and with the sides plastered with a mixture of dung and mud. Each married male in the village has his own hut, and besides this a hut for each wife and two smaller huts, one for his sons and another for his daughters, which latter live with an old woman, often their grandmother. The two sexes are kept rigidly apart, and though, as will be seen, the Jaluo notion of morality is scarcely the same as the European, there is little of the promiscuity of intercourse among the Kavirondo which is so noticeable a feature among the other Nilotic tribes of British East Africa.

As the sons grow up they marry and build houses in the father's village for themselves and their wives. The eldest son usually remains with his father for good and all, but as the other sons in turn become fathers of families, they often build villages for themselves near the paternal village; as often as not, however, the sons keep together after the father's death, the eldest becoming the head of the family.

There is a strict law of exogamy among the Jaluo, though a son may marry his father's wife if she is no blood relation of his; similarly two sisters are often simultaneously the wives of one man.

Their rule of inheritance, though apparently complicated, is really simple. The husband sets aside so many of his cattle to provide food for each wife, the chief or first wife naturally having a larger share than the rest. On his death the wife and the cattle set aside for her pass to her sons, her eldest son as the new *pater familias* again getting the larger share. If a man has no sons by the first wife but sons by another, all the property, including the first wife and her daughters, pass to these sons; if a man has no sons, all his property passes to his brother or nearest male blood relation; females can own no property, being themselves but chattels. On the death of a chief his power descends upon the eldest son of his first wife, even though his second or third wife may have borne him a son before the son by the first wife was born; *i.e.*, A is his first and chief wife and E his second. A may bear him two daughters, B and C, and then a son D. Though in the meanwhile E has borne him a son F, D will become chief in virtue of his mother's priority, even though he has an elder brother (F). But if D is not of fit age to govern, F may become chief, as a regency is too advanced an institution; and similarly if both D and F are infants, some elder blood relation, such as their eldest uncle, will succeed their father. This rule not unnaturally leads to much quarrelling, as, when the dispossessed heir grows up he often lays claim to rule, with disastrous results.

A great many formalities attend a Kavirondo marriage. As has been remarked above, exogamy is the strict rule. The young man having declared his choice to his father, the latter goes off to the girl's father and arranges the dowry. He then returns, and the intending bridegroom goes over with a bull or some goats as earnest money and partakes of the preliminary feast, an essential feature of this being an offering set aside for the sun-god, consisting of a little meat, part of a

FL11 Luo FL11

582 the JoOwila of Uyoma ; and is not approved, though sometimes permitted,
613 even between such fraternal clans as the dominant clans of Karacuonyo,
614 Kisumu, Kadem, Karungu, and Kabwoc. The young men are rebelling against the prohibition. Likewise I was told that though the JokOwila marry into the fraternal clan of Omia (Asembo) it is thought that such marriage may not be very fruitful.

613 Nevertheless in those big clans within which marriage is prohibited
614 or where it is not approved between fraternal clans the custom of *codo* is permitted. *Codo* is a socially recognized love-making in which the youths
836 court the girls and bring them to the *simba* or bachelor's hut and sleep with them there and have relations with them *intra crura*. Thus the Ka-
[833] Abudha and KoOkelo lineages of the JoOwila clan of Uyoma may *codo* between them, a practice said to date from two generations ago ; likewise the KaGumba and KaDepir lineages of the KaNyikal clan of Seme, though in their case it is said from the last generation only; likewise the JokOwidi and JokOgol of the KaRacuonyo of Karacuonyo. In these instances were a girl to be made pregnant her lover could not marry her.

613 When two lineages of the same clan are becoming widely separated
614 and are beginning to *codo* between them it is done at first with discre-
836 tion, because the older men are opposed to the innovation, then in open affairs in the bachelors' hut. Finally marriage is envisaged and perhaps
582 eventually permitted, in the first place the less approved form of marriage by abduction (*por*) and then the ordinary form (*meko*). When marriage begins to take place, and even more when it has the approval of the elders, it may be taken to be an indication of political fission, for it was found among the Luo, as among the Nuer, that political values are stated in the language of kinship and that the polito-territorial system is reflected in the lineage system.

582 A man may not marry a *nyakewo*, sister's daughter, in the classificatory
613 sense if her mother was a member of his maximal lineage but he can marry her if her mother belonged to a collateral maximal lineage of his clan,
614 though even then the elders do not always approve. The general principle of exogamy is that a man must not marry any woman whom he regards
184 as a *wat*, a cognatic relative, and Luo reckon kinship as widely as to exclude a man from marrying into his maternal grandmother's clan and his maternal great grandmother's maximal lineage, though it must be said that there is often disagreement, especially between men of different generations about the permissibility of marriage between distantly related persons, that is to say, about borderline cases. In spite of some divergence of opinion however it may be stated that for the Luo, people are either *wat*, kinsfolk, or *wasigu*, enemies. A man cannot marry kin and therefore must marry an 'enemy'. Hence when marriage is allowed between two groups it means that there is no kinship between them or that kinship is no longer recognized between them for purpose of exogamy and this, as said above, is an indication of political opposition, so that one often hears Luo say of a neighbouring tribe, e.g. a Karacuonyo man of the Kocia tribe, 'They are enemies, we marry them'. In other words adjacent tribes are structurally opposed segments in the tribal system

Some Customs of the Luwo (or Nilotic Kavirondo) living in South Kavirondo.

By the Rev. H. HARTMANN.

Contents:

Birth. — Betrothal and Marriage. — Burial of a married Man. — Burial of a Woman. — Burial of a Child.

Birth.

596 The Luwo people live together with their families in kraals. These families consist of the owner of the village with his wives, and his sons with their respective wives and children, and the owner's unmaried daughters.

595 Each wife has her own hut. The husband spends most of his time in the hut of his favourite wife. He may, however, have besides a hut for each of his wives, a small hut for himself, but he will never sleep in it. For this purpose he goes to the huts of each of his wives in turn, or generally he sleeps in that of his favourite wife, and visits the others, whenever he is informed by the women [833] that one of them has menstruated, then after 2 days he goes to her hut for a couple of nights.

842 If a woman has conceived and happens to be one who has not brought forth yet, then 3 or 4 months after conception she gets little incisions *(kedo)* made [304] all round the waist. For this operation the patient has to sit down on a stone (nothing else). The operation is performed by an older woman. She uses a crooked thorn which is hooked under the skin, and where the point of the thorn lifts the skin a very tiny cut is made with a native razor. Between every cut there is a space of about $^1/_4$ of an inch. Three rows of incisions are made this way all round the waist just below the navel, the rows being also about $^1/_4$ of an inch apart. No medicine is applied.

When the skin is healed again the woman goes home for 3 days to show herself *(tero kedo)* and a goat is killed for her by her father. She returns with roasted *wimbi* flour for brewing beer and a sheep. When the beer is ready the sheep and some chickens are killed and they have a feast *(kong kelo kedo)*.

After the feast the young woman gets from an older one some medicine, the ashes of burnt herbs, of which she has to taste a little morning and night for one month *(nañgo misalo)*.

When this month is over she gets another medicine, prepared out of cooked roots of plants *(yodh agulu)* which she takes morning and night until one month before giving birth.

[837] In case a woman who is with child has committed adultery she takes a certain medicine, called *manyasi*, otherwise she will have a miscarriage or the child will be a weakling.

844 When the hour of childbirth has come the woman sits down on the floor of the hut naked. Even the usual string of beads is taken from her waist. A

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

constant activity in the field and home. The freedom with which the young women mingle with the men is striking, they may be seen among them, leaning on their shoulders when standing, as unrestrainedly as the men with men. The absence of clothing in no wise embarrasses them nor does it cause either sex a moment's thought; they are accustomed to this state of nature from childhood and feel no constraint in mingling freely together. They are extremely fond of ornaments and of painting themselves with different coloured clays, and often make patterns upon their bodies which they retain until the clay wears off. Their hair is often allowed to grow long, and youths frequently increase the length of it by twisting cords into it, greasing the whole with castor or other vegetable oil and rubbing red clay into it. Men and women mix freely together and often work in parties on the same field, singing songs as they work and keeping time with their hoes as they dig. Their homes in the hills are exposed and cold. Still, they do not appear to feel the cold winds and move about and work as freely as well-clothed tribes. As a tribe they combine agriculture with pastoral pursuits and their diet consists of milk and vegetables.

Origin of the tribe. According to their traditions they come from the north-west. Their ancestor Ramogi, they say, had seven sons named Kwenda, Nyakal, Owede, Nyadwat, Sakwa, Alego and Langho; and he adopted another son, Ugenya. Langho, they say, is the father of the Masai and Setik tribes. They trace their own descent from Owede who had two sons, Omwa and Sagam. We thus have two groups forming the tribe, as follows: Omwa, whose descendants formed eight clans; Sagam, whose descendants form seven.

The descendants of Omwa:

1. Dongo	2. Nyuto	3. Orando
4. Kwamudi	5. Nyamwegi	6. Ndalo
7. Ogonyo	8. Nyakwal	

The descendants of Sagam:

1. Pwonja	2. Hadedi	3. Waranja
4. Rateng	5. Wango	6. Menya
7. Nyameda		

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

the ear of father, mother and child. But 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(bwanyo wich)*. The feast is prepared much like for a babe-boy, but there is no *awinja*, and the performance with the ladle does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere.

If the husband has more wives, he is not entitled to conjugal rights with any of them until after the birth of a child the feast has taken place, and he has slept again with the mother of the child. If he would brake this rule, the newborn babe would waste away and die *(omiyo nyathi chira)*.

Adultery is reckoned a serious offence by both husband and wife. If the woman knows that her husband is misbehaving in this way, she will refuse cohabitation, for if she is with a child cohabitations would result in a miscarriage. If a woman commits adultery her husband may send her away, and claim the dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her.

A widow is given in marriage to the full brother or the nearest relation of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she begets children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence, when the girls born to them grow up and get married, the real brother of deceased husband will receive the full dowry paid for them minus one cow for each girl, which cow goes to the real father of the girl for bringing her up.

When the boys born by them grow up and get married they will leave the kraal and build their own apart, unless their real father helps them to get married by paying the dowry.

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days; not even for nature's call. A hole is dug in the floor of the hut, and an old bottomless cooking pot is put over it, and this is used as a W. C. During those 20 days new beer is brewn. When the time has elapsed and the beer is ready, a bull is killed and its hide is dried for the parents of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or migou)* mixed with water in a small vessel. She dips her finger in it and

765 basketful of kaffir-corn. This corn is used to make beer from for the feast of shaving and smearing of the grave with mud, which takes place after 3 months (not 6, as in the case of husband's death). On that day also the parents of the deceased
587 woman bring another daughter, however small she may be at the time, which girl is to replace the deceased daughter, and will become the wife of the widower. They even may wait for a daughter still to be born, if deceased has no sister. But if the mother is old, and has no daughter to put in deceased's place, then the father may put a daughter by another wife in her place. This girl, though she may be a child in arms yet, is shown to the widower, who is not allowed to refuse her as his future wife, but has to wait till she is grown up. When the girl is about 10 years old a small temporary hut is built for her, in which she sleeps with her future husband for one night. Then she returns home till she is marriageable, after a heavy iron ring has been put round her left ankle, which remains as a sign, that she has taken the place of a deceased sister.

The widower, however, is at liberty to marry another girl in the meantime, but the deceased wife's sister will later be considered as his first wife (*dhako maluong*).

764 On the morning after the death of either husband or wife 2 bulls are killed. The first is sacrificed and eaten, there and then, by anybody coming for the funeral, the other one is simply killed for the relations.

769 When about 12 months have elapsed after the death of a woman, the same customs of distributing the ornaments of deceased, and the brewing of beer for all the relations and neighbours are observed, as take place on the anniversary of the death of a married man.

Burial of a Child.

765 Small children, whether boys or girls are bewailed by the women only. The reason for this is that the people have a superstition which says that if a father bewails his child his wives will not bring forth any more.

Grown up boys and girls are bewailed by the men also, but only for a short time and not by big crowds. The mother may bewail her child for a period of about 2 months every morning for a short time. She sits down beside the grave, where
[276] she lights a little fire to protect herself agains the cold, Her wailing is interrupted now and again for the purpose of smoking a pipe.

765 After the child's death the mother may not get her head shaven until after her next menstruation. Only after this her husband is allowed to sleep in her hut
● 834 and observe the conjugal rights. Until he has done this the husband is not allowed to observe those rights with any of his other wives. If he would break this rule he would make the mother of the dead child barren for the rest of her life.

764 Adult boys are buried on the left hand side of the hut a few yards away, smaller boys on the same side but under the roof outside; girls in the same way, but on the right hand side.

For adult children, whether boys or girls, the usual dancing, etc. take place, the same as for married people.

If a girl dies for whom the dowry has been fully paid, but for some reason

½ [The third day after burial. – Analyst]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

economy by handicrafts and exchanging pots and baskets for corn.

The introduction of modern household goods of a more durable nature has lessened women's chances of earning money through weaving baskets or making pots. The overcrowding of land has also meant an increased economic dependence on men. To satisfy family demands, most women engage in some kind of business transaction which often keeps them out of the home from morning till late in the evening. Although motor transport has improved these conditions, children have been unfavourably affected through neglect during the mother's prolonged absence. This change from sedentary occupation to long-distance travel has taken place since the coming of new economic standards, and at the moment it is very rare to find a woman who does not trade in a small way.

Women and the Birth of Children

Customs and taboos. The customs and taboos observed by expectant mothers merely reflect the social attitude of Luo women to the birth of their children. Thus the aims of the customs and taboos can only be appreciated in the light of a social desire for the woman to give birth without difficulty. Fundamentally this is also a basis for the disapproval of the birth of twins, and also of abnormal deliveries.

Concerning the persistence of the marital relationship during pregnancy there is no generally accepted restriction. But while custom varies from person to person, any sexual relationship continuing after the sixth month of pregnancy is regarded as excessive. The only social stigma attached to sexual relationship continued for the greater part of this period, is that it may provoke an open rebuke from the midwives or other women. Thus while no hard

[Text continues on p. 57]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

and fast rule can be placed on the time of the temporary termination of the marital relationship, it is generally left to the good sense of the men and women concerned.

The regulation of the diet. Here again the restrictions aim mainly at minimizing the chances of the child being too big, thus rendering it easier for the mother to give birth. Among the foods which women normally eat, bananas are eliminated during pregnancy because of their supposed fattening effect upon the child, and the danger of thus causing a difficult delivery. Among the most conservative women, pumpkins are placed in the same category with the additional belief that, since their contents are mostly water, they have a weakening effect upon the child.

Sugary foodstuffs such as canes, sweets, sugary tea or coffee are among the things which expectant mothers do not eat. Women believe that these foods produce babies so fat that they put a strain on the mother's strength. For the same reason, the excessive drinking of gruel is prohibited, and hot gruel is especially avoided on the grounds that it would scald the baby. But while these restrictions are adhered to in principle, in actual practice women with a strong liking for forbidden foodstuffs do not refrain from eating them.

A factor of great psychological significance is the belief that Luo mothers begin to yield to the will of their babies long before they are born. Among them are some who, during pregnancy, develop a habit of eating dried mud and other peculiar foodstuffs, one baby causing a mother to eat these and the next turning her appetite against them. These strange habits of eating are attributed to the will of the expected child; and it is believed that the domination of the child over the mother, enduring through the early part of its life, begins in the period of pregnancy.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

cry of the midwives was heard announcing the birth of twins, the news had to be carried to the parents of the woman. This loud cry was intended to scare the evil spirits which had brought about the double birth. With it began a series of taboos on the couple as well as on the twins, the family being virtually isolated from society. For emptying their bowels a large pot was placed in a hidden corner at the back of the house. If either of the twins died during the early period it was thrown into this pot. In place of the usual clothing, the couple had creepers twined around them. The period of taboo closed with a large gathering at which a great deal of beer was drunk. At this final ceremony the dancing was rather obscene and was accompanied by foul language in reference to the couple. These proceedings lifted the taboo from the shoulders of the parents, but the twins continued to be affected until their deaths. Moreover, anything done to one of the twins had to be done to the other also, because they could not be treated as separate identities. Now the attitude has greatly changed and even among pagans these customs are no longer observed. 845 [177]

Similarly, a birth in which the baby's legs appeared first was dreaded. This was ascribed to the work of the evil spirit.

Renewal of marital relationship. Originally it was the custom for the renewal of a marital relationship to take place on the third day following the birth of a female child, and on the fourth day after a male child. No married relatives were allowed to enter the hut to see the baby before the parents of the child renewed their marital relationship. 846 834

Although none of my informants could testify that this practice still exists, it is possible that it persists in certain places. Some of the informants pointed out that [177]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

846 834 177 modern maternity wards have weakened the custom, since women stay in them for seven days and return home after having shown the baby to many of their friends.

751 854 *Protection against witches.* Although Christian mothers are not affected by this kind of superstition, pagan mothers still tie things around the necks of their babies to protect them from malignant glances, these articles being attached when the children are exposed to the view of relatives and friends. Most people believe that 754 babies can be bewitched as soon as their skin begins to 854 darken, and the pagans believe that through magic an 753 ill-disposed person can introduce a worm into the baby's stomach. If this occurs, the baby cries and vomits whenever it is suckled by its mother. In the past when no clothes were worn, it was believed that the mother's breast could also be bewitched. The tradition was that every living person had a beneficial worm in the stomach, and that this worm digested the food eaten. When the worm refused to digest the food, there would be serious stomach trouble which might prove fatal. When a child was bewitched it was believed that its beneficial worm had been replaced by a harmful one.

751 Protection against this harmful worm could supposedly be gained by scratching the body of the child (the forehead, the palm, or the flat of the foot) with some medicine, and it is still said that, if the medicine is sufficiently strong, any evil-eyed man looking at the child with the intention of bewitching it will lose his eyesight. Some fragments of bones or roots of herbs may also be worn for the same purpose. Many of these cus- [177] toms have disappeared in strongly Christianized areas, the Christians themselves having sometimes taken direct action to stamp them out, but nurses are still warned not to let young children play on the roadside, in order to protect their charges from being bewitched.

8: Shaw G-5 (ca. 1930)1932 FL11 Luo FL11

were other sons by other wives growing up in the *dala* (*dala*=homestead), a woman would hasten the marriage of her own son lest when it came to paying the bride-price for him cattle might be short on account of the claims of other sons on the family resource. 582 583

Between the permission to marry, however, and marriage itself, there intervened a long chain of events, extending over months, and sometimes even over years. The mere choice of a bride was hedged about with complications and difficulties that often delayed a man's marriage considerably. This choice was, in the first place, limited by the rule that he might not marry any woman related to him, however distantly, either on his father's or on his mother's side of the family. To do this would be to commit incest, and would bring terrible consequences upon the clans and families concerned. If it happened, as it sometimes did, that a man fell in love with a girl without knowing whether he was related to her or not, only to find that she belonged to one side or other of his own family, the discovery put an end immediately to all intercourse between them. If, on the other hand, it could be established that the two were not related, the man would get permission from his father to take her as his wife, and the usual negotiations would be put in hand. It was, however, more usual for a man to leave the choice of his wife to his father, who would select a suitable maiden with regard only to the mutual advantage of the two families concerned. In this case neither the young man nor the girl were regarded as at liberty to refuse the marriage. If the son did so, it was at the cost of his father's deep displeasure; and this was a serious matter in the old days when a man was entirely dependent upon his father, not only for the means to acquire a wife, but for his livelihood in general. So to rebel was unusual. The girl was equally at the mercy of her parents. If she disliked the husband selected for her the only way to escape the match was to run off with another man. But if she did this her lover's father would only pay a very small bride price for her, even as little as a single cow, and not only was she considered to have disgraced herself (not unnaturally in view of the severe pecuniary loss suffered by a family losing a daughter for whom the customary cattle had not been received) but her conduct was regarded as a slur on the whole family. 582 835 584 626 583 577

If a young man was specially anxious to marry a girl who was not debarred by any relationship from becoming his wife, and who returned his affection, he could establish a sole claim to her by sucking her breast before witnesses. After this ceremony she could not be given in marriage to any other man. The existence of such a custom is sufficient proof that among the Luo, as among the more civilised, marriage is often the outcome of a strong personal attraction between a man and a woman. And the fact that tribal custom provides for such a contingency within an otherwise largely utilitarian 584 [201]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

this attitude that unmarried girls, as they grow older, are often forced to marry in the end by taking advantage of the institution of polygamy, which acts as a final method of absorption. Although she may live to an advanced age, a single girl is continually tormented by the fact that society does not approve of unmarried girls.

Restrictions. Traditionally, a mature girl is not allowed to enter her father's or her mother's sleeping place, especially if the mother is still giving birth to children. This restriction, although generally ignored by Christians, applies also to the wives of her uncles. Those who are her parents or parents by marriage do not go where a girl receives her male visitors. By custom this hut was built beyond view of the parents' huts and served as a sleeping place for boys. It is considered that a girl who has commenced associating with men should not enter her mother's or father's hut because she would interfere with their powers of reproduction.

Relationship with brothers. The fear of incest has led to the practice of keeping young women's activities as separate as possible from those of their brothers, but free association and conversation concerning their mutual interests generally takes place, since brothers and sisters retain an interest in each others' love affairs. From his sisters, a young man may be informed of things he wishes to know about his girl friend.

Pre-marital pregnancy. Cases of pre-marital pregnancy were very rare in the past, according to most of my informants. But this rarity was not due to the fact that sexual relationships were prohibited. Pregnancy among mature girls was apparently not infrequent from any strict moral code, but from the conscious effort of the girls themselves to guard against it. Because much importance was attached to virginity, it was a matter of personal pride and was carefully guarded. It was a great honour and a

619 diate kin of the slayer, and eaten by representatives of the entire clan. It might, however, be insisted on that the slayer should marry a wife in 682 the name of the dead clansman and raise heirs to him. Strangers having close kinship links with a dominant clan, may refuse to pay compensation, and they tend to regard killing as a sin, since the acceptance of compensation for homicide emphasised a distinction they are anxious to obliterate.(1) A Luo tribe can be defined as a unit in which compensation for homicide is paid, or in which there is provision for payment and the settlement of the feud.

The Tero Buru

619 Luo tribes were formerly separated from each other by the *thim* - a 766 stretch of bush country left unoccupied. Between segments of the same tribe there was no *thim*. The ritual demonstration of *tero buru* took place across these boundaries. It was the custom of the Luo in the past not to bury an important man, known for his wealth or for his military ability, until the whole tribe, or a large part of it, had crossed the *thim* and demonstrated in front of the homesteads of the neighbouring tribe. The demonstration took the form of insults, challenges to fight and the tempting parade of cattle. It was a matter of honour for the challenging party to stand their ground and defend their herds with their lives. Such demonstrations were also made against neighbouring Bantu who had a similar structure to that of the Luo tribes. The demonstrating party was not usually attacked unless two *buru* parties of opposing tribes met. Sometimes, however, the opportunity was taken to try and raid the cattle of the neighbouring tribe.

619 Payment of compensation and the *tero buru* are the two main indications of tribal separation. In addition there is the association of a specific lineage unit with a tribe.

CLANS AND LINEAGES

613 Each Luo tribe has a dominant clan or lineage. The clan *(dho-ot)*, has a lineage structure and lineages are differentiated by adding to the 614 name of the clan or larger lineage *ao* and the individual name of the smaller branch. Formerly, the clans were exogamous but today the larger clans are not always so. Within the large clans maximal lineages can intermarry when the distance between them has become great enough.

●836 Where the separation between two lineages has not proceeded far enough or where two clans are closely related there is a socially recognised form of love-making called *codo*, which takes place between the young men and girls of both groups. Marriage is not permitted until the 582 separation has proceeded further. After some generations the less approved type of marriage *(por)* may be permitted. This is marriage by ab- 583 duction and it is eventually replaced by the ordinary form *(neko)* when the complete separation and distinctiveness of the units is recognised.(2)

582 A man is forbidden to marry a women who is a *wat*, a cognatic relative.

(1) Evans-Pritchard, *Rhodes-Livingstone Journal*, 1949, No.VII, p.4.
(2) *Ibid.*, p.7.

2:Evans-Pritchard E-5 (1936) 1949
FL11 Luo FL11

582 the JoOwila of Uyoma ; and is not approved, though sometimes permitted,
613 even between such fraternal clans as the dominant clans of Karacuonyo,
614 Kisumu, Kadem, Karungu, and Kabwoc. The young men are rebelling against the prohibition. Likewise I was told that though the JokOwila marry into the fraternal clan of Omia (Asembo) it is thought that such marriage may not be very fruitful.

613 Nevertheless in those big clans within which marriage is prohibited
614 or where it is not approved between fraternal clans the custom of *codo* is permitted. *Codo* is a socially recognized love-making in which the youths
836 court the girls and bring them to the *simba* or bachelor's hut and sleep
[833] with them there and have relations with them *intra crura*. Thus the KaAbudha and KoOkelo lineages of the JoOwila clan of Uyoma may *codo* between them, a practice said to date from two generations ago ; likewise the KaGumba and KaDepir lineages of the KaNyikal clan of Seme, though in their case it is said from the last generation only; likewise the JokOwidi and JokOgol of the KaRacuonyo of Karacuonyo. In these instances were a girl to be made pregnant her lover could not marry her.

613 When two lineages of the same clan are becoming widely separated
614 and are beginning to *codo* between them it is done at first with discre-
836 tion, because the older men are opposed to the innovation, then in open affairs in the bachelors' hut. Finally marriage is envisaged and perhaps
582 eventually permitted, in the first place the less approved form of marriage by abduction (*por*) and then the ordinary form (*meko*). When marriage begins to take place, and even more when it has the approval of the elders, it may be taken to be an indication of political fission, for it was found among the Luo, as among the Nuer, that political values are stated in the language of kinship and that the polito-territorial system is reflected in the lineage system.

582 A man may not marry a *nyakewo*, sister's daughter, in the classificatory
613 sense if her mother was a member of his maximal lineage but he can marry her if her mother belonged to a collateral maximal lineage of his clan,
614 though even then the elders do not always approve. The general principle of exogamy is that a man must not marry any woman whom he regards
184 as a *wat*, a cognatic relative, and Luo reckon kinship as widely as to exclude a man from marrying into his maternal grandmother's clan and his maternal great grandmother's maximal lineage, though it must be said that there is often disagreement, especially between men of different generations about the permissibility of marriage between distantly related persons, that is to say, about borderline cases. In spite of some divergence of opinion however it may be stated that for the Luo, people are either *wat*, kinsfolk, or *wasigu*, enemies. A man cannot marry kin and therefore must marry an 'enemy'. Hence when marriage is allowed between two groups it means that there is no kinship between them or that kinship is no longer recognized between them for purpose of exogamy and this, as said above, is an indication of political opposition, so that one often hears Luo say of a neighbouring tribe, e.g. a Karacuonyo man of the Kocia tribe, 'They are enemies, we marry them'. In other words adjacent tribes are structurally opposed segments in the tribal system

MARRIAGE CUSTOMS OF THE LUO OF KENYA

E. E. EVANS-PRITCHARD

114 THIS paper forms part of a short general account of the Luo based on a rapid survey made in 1936. The survey was financed by the Leverhulme Grants Committee. An earlier part, describing the political structure of the Luo, has recently appeared in another journal.[1]

Apart from information provided by Father Hartmann[2] and a fuller account by Mr. K. C. Shaw,[3] early accounts of Luo marriage are slight, and in some cases misleading. Mr. Shaw's account covers a good part of the ground covered by the present paper, but it is useful to have two independent accounts, especially as both were written from information obtained through interpreters. When I went to Kenya I did not expect to visit the Luo and I had not therefore read Mr. Shaw's article. Mr. Shaw and I disagree in a number of particulars in the overlapping parts of our papers. It [184] does not follow from this that either of us is wrong in our statements because, as Mr. Shaw points out, there is some variation in local custom in the different tribes of Luoland. My own information on this particular subject was mostly obtained from [115] the Alego tribe of Central Kavirondo. In the main I have followed the account given me by Pastor Ezekiel of that tribe. In doing so I have omitted much detail.

Simba

836 882 Courtship and marriage are intimately connected with the custom of making love to girls (*codo*) in the *simba* or bachelors' dormitory, the hut nearest to the entrance to a Luo homestead. Youths arrange with girls to visit them there at night, and when a youth is visited by one of his sweethearts the other young men of the home sleep elsewhere. He plays with the girl and has intercourse between her thighs and they sleep together. He must not penetrate her—that is regarded as shameful, and it will be known on the day of her marriage. If a girl comes from a distance to visit her lover she may spend several nights with him in the *simba*. A girl may have several lovers in different homesteads whom she visits from time to time; she pleases herself in these matters. The young men will not quarrel about her, nor will her father and brothers interfere in her love affairs. She may continue the practice throughout the stages of her marriage to another man right up to the *riso*, the final ceremony of marriage. I [533] was told that a girl does not usually visit the *simba* more often than once or twice a month. Occasionally the lover employs a harpist to entertain the girl and his friends on one of her visits, and there is singing and dancing. Between the songs youths, and sometimes girls also, stand up and boast of their virtues, of the number of their friends and sweethearts, of their wealth, and of their families and lineages; and when they have finished they throw a gift to the harpist, maybe to-day a shilling. Other youths then try to outdo them in boasts and generosity.

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

582
There are no restrictions as to the number of women a man [595]
may marry nor as to the number of his wife's sisters whom
he may take to wife. Previous to her marriage a young 836
woman may have as many lovers as she wishes, she is only 883
careful to avoid incestuous connections. The unmarried
women have their own quarters in a village and the young
men theirs, and they seldom have any further intercourse
than that of brothers and sisters; the young men, however,
from another village pay visits to the young women during
the day and make love to them, and in the evening the
women return the men's visit and have sexual relations with
them, while other young people sing songs of an obscene
character and dance outside the house. Such intercourse is
not stopped nor discountenanced by the elder people, as it is
a recognised custom. Should any children be born from such [848]
relations, no punishment ensues nor are the couple blamed.
When a father considers his son old enough to marry, he chooses 584
a woman to be his wife. He then takes a cow and a goat to
the parents of the young woman and arranges with them the
amount to be paid for the marriage-fee. If the parents 585
consent to the match, when an instalment of the fee has been
paid, the bride is conducted by her friends to the home of the
young man and lives with him as his wife for ten days: during
this time there is daily singing and dancing outside the house
where the bride and bridegroom reside, and they take part
in the dances. At the end of ten days the bridegroom's parents
give a feast to all those who have gathered, and after the feast
the friends of the bride escort her back to her parents, who in
turn give a feast to the people that accompany their daughter.
The bride remains with her parents until her husband is able to
obtain and pay the full sum asked for as the marriage-fee.
During this time, while the bride is waiting for her husband [837]
to bring the marriage-fee, there is no obligation upon her to
live a chaste life, and she is free to have as many lovers as
before. When, however, the fee has been paid and the bride
claimed, she ceases to live a loose life and becomes most chaste.
The husband builds his house, either in or near his father's 591
village, and his wife is brought thither. When a man marries

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

storm of rain broke over the valley, and next morning the complainants were back again to point out that his refusal to come in at the Bwana's summons had so frightened the rain-maker that he had sent rain next day, and to offer most hearty thanks for the white man's beneficent interference.

Though the Jaluo have good manners on the whole, some of their customs are decidedly the reverse of civilised. In common with the other Nilotic tribes of British East Africa, they draw blood from the living cattle and drink it. The custom, however, has its justification, for in many parts of Kavirondo this is the only method by which the natives can obtain salt. Also the older men are confirmed drunkards and hemp smokers, which causes them to age very quickly and probably shortens the average term of life.

Those who dwell on the shores of the great lake and of the larger rivers are expert fishermen: they catch fish with rod and line, a sunken trawl line, in weirs, by woven grass substitutes for nets, and by spearing them with four-pronged wooden spears which they throw with extraordinary accuracy. They are also keen huntsmen, though of little use out shooting, and possess highly trained dogs which will run down an oribi or hare or find a wounded guinea fowl knocked down by their throwing sticks.

In character they are naturally very honest, except with regard to cattle, a temptation which no East African can withstand. They are extremely jealous of any relations between their women and men of other tribes, nations or colour; but among themselves an unmarried woman who has reached the age of puberty may have as many friends, as they call them, as she likes, provided that they come from another clan; after marriage she must confine her attentions to her husband.

Perhaps their most pleasant trait is their love of fun and laughter: the feeblest joke or the slightest bit of horse-play will set them in roars of laughter. For hospitality and industry they have a well-earned name; they are, in fact, in every way most amenable when treated with a little kindness and consideration. They have a considerable knowledge of blacksmith's work, though the spears which they turn out cannot be compared with those of the Masai for fine work. With the latter tribe, however, they show a well-developed artistic sense, the designs on their shields being generally handsome and well carried out. They are also very fond of music—of a kind: they play upon an eight-stringed harp, which is mainly used to provide an accompaniment to their extempore songs, composed in the heroic or comic vein.

Speaking generally and comparatively they are a peaceful, non-aggressive folk, though the common impression that they are cowards is ridiculously wrong: in the writer's small experience of African tribes they have shown themselves better fighters than the much-lauded Swahili, and better policemen than the dreaded Masai; they are certainly more amenable to discipline and less inclined to prefer their own wisdom to that of their officers.

On the other hand they are most painfully litigious: civil cases which arose in

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

the herds and, by emulation of the age group next above them, slowly acquiring proficiency in the typical adult male pursuits, while the girls are drawn into the domestic tasks of the elementary family, food preparation and cooking, fetching water, and minding babies.

The young boys of a play group sleep together in the goat hut of a homestead when they no longer share their mother's hut at night. The girls sleep together in the hut of some widow of the group who is past childbearing age. This is the most important institution for the transmission of female culture. Girls only leave it at marriage, and till that time they are continuously trained in the adult roles expected of them. Boys at puberty build themselves bachelor huts (Dholuo *simba*) in which they sleep and where they also entertain their girl friends. A group of young men makes a formal assignation with a group of nubile girls from a segment of another maximal lineage into which marriage is possible, and visits and entertainments are held to and from the one lineage territory to the other. The two groups pair off with one another into sex partnerships which last till the groups break up and reform. A youth graduates out of this company of *simba* age-mates at marriage.

Authority over children rests jointly with the parents. That of the mother is likely to be the most effective in the early years, and she always holds a strong sanction in her manipulation and control of the food-supply. The father is ultimately responsible for the order of the family, and his discipline is stronger than the mother's as the children grow older. There is a relation of friendly intimacy between alternate generations. Children are on easy terms with their grandparents and will certainly use the latters' households as an escape from home discipline or as a more generous source of food if need or opportunity arises. Children are at no period encouraged to live away from home with other relatives, but parents allow them to circulate freely among a number of homesteads wherever they find the best welcome and the most plentiful food, among families which are usually both neighbours and close agnatic relatives. Brother and sister have no material reasons for conflict and there is a strong and lasting bond of affection and reliance between them, institutionalized in the symbolism of a number of ritual occasions, and linked to their important later relation to one another's children as mother's brother (*nera*) and father's sister (*waya*). Apart from parents, these are the only two consanguine relatives of the first ascending generation who are picked out by special kinship terms. The newly married woman is under the authority of her mother-in-law, and a man's relation to his wife's parents is marked by deep respect and avoidances. Ritual practices as well as personal attitudes emphasize the importance of fertility and virility,[1] and the value attached by a man to a numerous offspring and the ability of his wives to provide it. The Luo are aware of the male and female parts in procreation, but say that 'the woman's blood goes for nothing'. This seems a necessary inference from the nature of lineage organization rather than vice versa, for they would not argue that there is any tendency for children to resemble the father rather than the mother, nor do they permit marriage with close consanguine kin though of an unrelated lineage. It is

[1] e.g. the special rites which have to be carried out for a nubile girl dying unmarried, a wife dying without children, a widow dying before remarriage, a man dying when one of his wives is still childless, or a man dying before he has experienced sexual intercourse, the latter being treated similarly to a barren woman.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

882 There is therefore frequent friction between some
593 mothers and daughters.

The father, while maintaining an interest of his own, does not exhibit his liking for his daughter so openly. The economic value of a girl to society is gauged by the extent to which a man may be excused his debts on the ground that after his daughter's marriage he will be able to pay them.

Allowances given to girls are not very generous despite the fact that daughters have a higher economic value than sons. There is a feeling that not much money should be lavished on someone who will not remain in the family to help the father in his old age. The main desire is to see the girl married, and it is a source of worry if she does not associate with men. The girl is also expected to be sociable towards neighbouring women, because if she is unpopular with them they might speak against her in the presence of her suitor or his relatives.

At this time disciplinary control by the parents slackens, since in order to contact men the girl requires a certain amount of freedom. Disciplinary measures may be exercised only in the event of misconduct, such as running away with a young man without notice to parents or having relations which are morally prejudicial to the community life. The mother, however, loses her dominating influence during the school age and the task of disciplining the older girl becomes the duty of the father or her older brothers.

The Sexual Life and Attitude of Adolescents

836 The sexual life of the adolescent is conditioned by the
883 prevailing social conventions on the nature of sexual relationship between males and females. Thus, though it may appear on the surface that Luo society makes no allowance for unrestricted sexual contact, in fact a

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

difficult burden is imposed on the girls, who have to endure considerable inhibition to avoid social censure. On the other hand, boys enjoy much greater freedom. It would appear that this relatively stronger censure of a girl's conduct derives its strength from the anatomical evidence a woman is required to show on her day of marriage to prove her chastity. In this way it appears to be the duty of society to make sure that girls live up to the moral standards which ensure them a successful marriage. Therefore, whilst considerable intermingling is accorded to both sexes, relationships resulting in pregnancies and prostitution are discouraged. And, as has been seen, the social stigma attached to such relationships and their results comes down most heavily on the woman.

In view of the difficulties involved, the girl therefore adopts a compromise. She uses her wit as a defensive means of enabling her to enjoy the companionship of men and at the same time to help her to avoid being overcome by their reasoning. In this way, an adolescent girl who is clever at conversation is admired and considered entertaining by those men with whom she comes into contact.

When there are meetings between young girls and men there is accordingly a great deal of artful conversation. Girls consider men to be full of tricks designed to trap them. Mothers also warn their growing daughters to be careful of their conduct when with the opposite sex, explaining particularly that men are not to be played with to an extent where the matter becomes serious.

When girls go about together in a group they reproach any of their number who give in to men easily. On these occasions group morality is far stronger than among those who are more individual in their attitudes.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

tional society had a more deliberate or conscious sex education than they receive in modern times. Instruction on the nature of sexual relationship was formerly given by an old woman of the village, whose hut served as a communal sleeping place for the girls. This old woman was one who must have stopped giving birth to children. She was either a grandmother or an elder wife in a polygamous homestead. The communal sleeping places are still a feature of the girls' environment, but many of the modern huts have no experienced woman in them; hence the girls have lost their former source of instruction on both the marital and the following day-to-day relationships.

The change from the traditional type of sex education has forced girls approaching marriage to seek information elsewhere. At present they usually make enquiries of experienced married women living in their neighbourhood. Beyond a few cautious warnings, mothers are rarely known to take part in the sex education of their daughters while fathers are completely detached from this field of enquiry.

Sex activities in the communal sleeping places. Talks on sex are not the only activities engaged in by adolescent girls in their sleeping places. In some areas they also receive nocturnal visits from young men who have failed to find suitable opportunities to meet them during the day. This is not a widely spread practice, however, which may be due partly to the strict morality imposed by Christian moral conventions.

Sometimes the girls themselves make arrangements to welcome these visitors by night, remaining awake in order to open the door for the men with whom they have made the appointment. Sometimes this form of visit is also carried out by young men without the girls' consent, but if they are discovered, a great outcry is

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

raised against such raiders. It is considered a disgrace to be discovered as an accomplice in raids on the girls' sleeping quarters.

On attaining Maturity

The attainment of maturity among girls is marked by the first onset of menstruation. In the past this was kept very secret until several periods had been experienced, and even now its first occurrence is kept secret. Formerly, early preparations were made for it by instructing the girls about the physical changes involved.

The information regarding this important physiological happening used to be given by the old woman in whose hut the girls slept. At present the information is obtained largely from experienced women with whom the girls associate. In the past there was no initiation ceremony to celebrate the event, and today the position remains the same. Although the betrothal of a girl could take place as early as ten, the social attitude was and still is that girls should not be handed over to their husbands before attaining maturity. Even when the mutual handing over took place before this age, the girl was obliged to live in the home of some older woman until the advent of menstruation. It is still believed that premature marriage results in great weakness to the girl.

The social position of a girl on reaching maturity. The social position of the newly-mature girl is vague and uncertain. Any abnormality of mind, character or body, is a source of anxiety to her family. Moreover, as most girls marry between sixteen and eighteen, there is a tendency for ill-wishers to over-state the ages of girls above that limit, because the attitude of society towards them is similar to that adopted towards overdue goods. Those who fail to marry at an early age thus become subjects of scorn. So strong is the pressure exerted by

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

this attitude that unmarried girls, as they grow older, are often forced to marry in the end by taking advantage of the institution of polygamy, which acts as a final method of absorption. Although she may live to an advanced age, a single girl is continually tormented by the fact that society does not approve of unmarried girls.

Restrictions. Traditionally, a mature girl is not allowed to enter her father's or her mother's sleeping place, especially if the mother is still giving birth to children. This restriction, although generally ignored by Christians, applies also to the wives of her uncles. Those who are her parents or parents by marriage do not go where a girl receives her male visitors. By custom this hut was built beyond view of the parents' huts and served as a sleeping place for boys. It is considered that a girl who has commenced associating with men should not enter her mother's or father's hut because she would interfere with their powers of reproduction.

Relationship with brothers. The fear of incest has led to the practice of keeping young women's activities as separate as possible from those of their brothers, but free association and conversation concerning their mutual interests generally takes place, since brothers and sisters retain an interest in each others' love affairs. From his sisters, a young man may be informed of things he wishes to know about his girl friend.

Pre-marital pregnancy. Cases of pre-marital pregnancy were very rare in the past, according to most of my informants. But this rarity was not due to the fact that sexual relationships were prohibited. Pregnancy among mature girls was apparently not infrequent from any strict moral code, but from the conscious effort of the girls themselves to guard against it. Because much importance was attached to virginity, it was a matter of personal pride and was carefully guarded. It was a great honour and a

20:Ominde 1-5 (ca. 1948) 1952
FL11 Luo FL11

source of much social rejoicing to discover that a married woman had been found to be a virgin. Such a bride was given a high prestige among the other women.

In the past, if a woman gave birth to an illegitimate child, her only chance of marriage was to an old man with a number of wives. There was no possibility of occupying the position of chief wife of the family; and the heads of cattle paid were much fewer. The child was taken by the man who legally married her, but she was not allowed to give birth in her own home. Everything was done to get rid of her as soon as possible.

Examples of such pregnancies are very common at present. But although social disapproval is still keenly felt, modern conditions have become more favourable to women in this situation, and an increasing number of them are being married to bachelors. Unlike some communities, no death punishment was ever given. If the occurrence takes place between close relatives the matter is kept secret; in the past, however, the couple could be exiled.

Modern Education and Adolescent Girls

Progress in the education of adolescent girls is hampered because the Luo people do not appreciate its suitability to the environment of their women. To the majority, modern education is associated with clerical work and the many other jobs that men take up after a school career. The position of girls in this scheme is not clearly envisaged.

The social importance attached to marriage is having to adapt itself to a prolonged school career and the raised age for marriage which this implies. An inability to appreciate schooling for girls is also based on a high esteem for the traditional education which it tends to interrupt and weaken.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

to be seized; but even when the father has agreed to let
583 his daughter go, the younger relations put up a fight, not in order to detain the girl, but to test the courage of the people taking her. This is also done to test the value attached to her as a future wife in her husband's community.

585 Among the majority of young women an unwilling-
152 ness to leave home is exhibited on the last day. This unwillingness, accompanied by violet outbursts of emotion, is partly caused by the break with her family and familiar environment that marriage involves. Sometimes the emotional outbursts reach undue proportion, rendering the young woman a thorough misfit in her new home. Screaming is common even among those who are secretly pleased with the situation.

To a person unused to this sight it would appear to be an act of violence and injustice. But though some of the women may be sincerely upset, a large number of them look back on the incident with great satisfaction and confess that they screamed because it was customary to do so. This is made even clearer by their reactions when they are later present at similar incidents. Amidst great laughter they say comforting words to the girl being dragged, assuring her that she will meet with excellent treatment.

585 *The traditional ceremonies.* The news that a particular girl has been caught is followed by the organization of a
[836] group of young girls to follow after the bride. It is this group which brings back news to the parents as to whether the girl was a virgin. They remain at the bride's new home for one night and during this time young men were by tradition allowed to spend the night in the same hut with these girls.

The next ceremony takes place when the bride's parents slaughter an ox and send special parts of the

241 life of the countryside. Ofttimes the boys are armed with slings from
136 which stones are projected at random into the midst of the crop, or
857 into the midst of a flock of birds as they rise. One of the reasons why the Luo denude the land of trees is because they give harbourage to their bird enemies.

241 They are wise to insect pests also, and have a greater belief in
136 their remedies than many a farmer has in the aids supplied by our
789 civilization. The medicine is called by two names, " yadh miri " or " yadh lisese." It is employed against a small red and black beetle, called by the Luo " Nyanginja " which eats the flower of the millet, thus preventing a crop. The medicine man who prepares it must be a man of peaceable disposition and character, not a quarreller or disputer with his neighbours. The whole success of the medicine depends on the absence of disputation and quarrelling, and of the grosser forms of vice, like adultery. No adulterer may be supplied
●[837] with the medicine, for his very handling of it would nullify its usefulness, not only for himself, but also for his neighbours. All must be peace in the community until the harvest is reaped. Unlike other medicines, which are tied to a pole and left to work their influence, " yadh miri " is made into a decoction, which is sprinkled over the growing crop at eventide. I have seen the operation at a place called Maranda in Sakwa, Central Kavirondo. It was then being used against maize borer. At a time when this pest was giving a good deal of trouble to European farmers, I heard a man who was back in the Reserve on leave from a farm in the Kitale district, pour scorn on the methods used by Europeans with various sprays. He was by way of being one of the more progressive men, but he had nothing but absolute faith in the efficacy of " yadh miri."

578 Crops damaged by domestic stock gave rise to many an angry
685 passion. The owner of the crop had liberty to chastise personally the herdboy (or man) through whose carelessness the stock were left untended. If the herd were a lad he could be cuffed and thumped without being able to proceed against the assailant. Nor did the father protest, provided the chastisement were in reason, for he knew that his son had rendered him liable to a claim for compensation. As likely as not he would add his own quota to the punishment already meted out. If the owner feared that he would get the worst of it in a personal encounter with a herdsman, then he had his remedy at law.

241 When the crop is ready for harvesting it is the duty of the men to do the reaping. In the case of millet, this is a laborious business, calling for judgment, for not all the heads would be ripe, and some must be left to ripen after the bulk has been reaped. It is the task
[462 of the women and children to pack the crop into the grain baskets
857] and carry it to the grain stores. In the case of millet it is quite

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

and secures a large following, and thus becomes a powerful chief.

Petty thefts from houses are dealt with by a medicine-man who discovers the culprit. He goes to the village in which the suspected person lives, takes an ordinary stool, sets it in an open space in the village, fills the hollow of the seat with water and covers it with an inverted cooking-pot. Having done this he goes through a formula mentioning the names of the families of the village, and at length mentions the names of the suspected family individually, until at last he names the person accused. When the name of the guilty person is mentioned, the water on the stool is said to flow from under the pot. The person thus convicted is fined and, in addition to his fine, he is compelled to restore the full amount of property he has stolen.

Adultery. When a man is accused of adultery, he is tried and, if found guilty, is fined an ox which is given to the injured man. An unfaithful wife, who leaves her husband, may be restored to him and he will not think the worse of her. Should she refuse to return to her husband, her father must either supply the husband with another wife, a sister of his former wife, or restore the marriage-fee. Unmarried women are given great license and are not considered guilty of an immoral action when they have sexual relations before marriage.

Murder. A murderer is discovered by means of the oracle. A medicine-man is asked to discover the murderer and, when he names the person, the relatives of the murdered man accuse the murderer. The accused is ordered to bring his son, and the medicine-man, after making incantations over a pot of drugs, gives the boy a cup of it to drink. If the father is guilty, the son will die at once; whereas, if he is innocent, the boy will suffer no harm. When a man is proved to be guilty or acknowledges his guilt, he is fined a number of cows and has to give his daughter or sister to the father of the murdered man. A murderer seldom seeks safety by flight when he has committed his deed, and often confesses his guilt without any trial, avowing the motives of his act. There is a special ceremony to purify a murderer. He is first separated from the members

582
There are no restrictions as to the number of women a man [595]
may marry nor as to the number of his wife's sisters whom
he may take to wife. Previous to her marriage a young 836
woman may have as many lovers as she wishes, she is only 883
careful to avoid incestuous connections. The unmarried
women have their own quarters in a village and the young
men theirs, and they seldom have any further intercourse
than that of brothers and sisters; the young men, however,
from another village pay visits to the young women during
the day and make love to them, and in the evening the
women return the men's visit and have sexual relations with
them, while other young people sing songs of an obscene
character and dance outside the house. Such intercourse is
not stopped nor discountenanced by the elder people, as it is
a recognised custom. Should any children be born from such [848]
relations, no punishment ensues nor are the couple blamed.
When a father considers his son old enough to marry, he chooses 584
a woman to be his wife. He then takes a cow and a goat to
the parents of the young woman and arranges with them the
amount to be paid for the marriage-fee. If the parents
consent to the match, when an instalment of the fee has been 585
paid, the bride is conducted by her friends to the home of the
young man and lives with him as his wife for ten days: during
this time there is daily singing and dancing outside the house
where the bride and bridegroom reside, and they take part
in the dances. At the end of ten days the bridegroom's parents
give a feast to all those who have gathered, and after the feast
the friends of the bride escort her back to her parents, who in
turn give a feast to the people that accompany their daughter.
The bride remains with her parents until her husband is able to
obtain and pay the full sum asked for as the marriage-fee.
During this time, while the bride is waiting for her husband [837]●
to bring the marriage-fee, there is no obligation upon her to
live a chaste life, and she is free to have as many lovers as
before. When, however, the fee has been paid and the bride
claimed, she ceases to live a loose life and becomes most chaste.
The husband builds his house, either in or near his father's 591
village, and his wife is brought thither. When a man marries

Some Customs of the Luwo (or Nilotic Kavirondo) living in South Kavirondo.

By the Rev. H. HARTMANN.

Contents:

Birth. — Betrothal and Marriage. — Burial of a married Man. — Burial of a Woman. — Burial of a Child.

Birth.

596 The Luwo people live together with their families in kraals. These families consist of the owner of the village with his wives, and his sons with their respective wives and children, and the owner's unmaried daughters.

595 Each wife has her own hut. The husband spends most of his time in the hut of his favourite wife. He may, however, have besides a hut for each of his wives, a small hut for himself, but he will never sleep in it. For this purpose he goes to the huts of each of his wives in turn, or generally he sleeps in that of his favourite wife, and visits the others, whenever he is informed by the women [833] that one of them has menstruated, then after 2 days he goes to her hut for a couple of nights.

842 If a woman has conceived and happens to be one who has not brought forth yet, then 3 or 4 months after conception she gets little incisions *(kedo)* made all round the waist. For this operation the patient has to sit down on a stone [304] (nothing else). The operation is performed by an older woman. She uses a crooked thorn which is hooked under the skin, and where the point of the thorn lifts the skin a very tiny cut is made with a native razor. Between every cut there is a space of about $^1/_4$ of an inch. Three rows of incisions are made this way all round the waist just below the navel, the rows being also about $^1/_4$ of an inch apart. No medicine is applied.

When the skin is healed again the woman goes home for 3 days to show herself *(tero kedo)* and a goat is killed for her by her father. She returns with roasted *wimbi* flour for brewing beer and a sheep. When the beer is ready the sheep and some chickens are killed and they have a feast *(kong kelo kedo)*.

After the feast the young woman gets from an older one some medicine, the ashes of burnt herbs, of which she has to taste a little morning and night for one month *(nañgo misalo)*.

When this month is over she gets another medicine, prepared out of cooked roots of plants *(yodh agulu)* which she takes morning and night until one month before giving birth.

[837] In case a woman who is with child has committed adultery she takes a certain medicine, called *manyasi*, otherwise she will have a miscarriage or the child will be a weakling.

844 When the hour of childbirth has come the woman sits down on the floor of the hut naked. Even the usual string of beads is taken from her waist. A

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

the ear of father, mother and child. But 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(bwanyo wich)*. The feast is prepared much like for a babe-boy, but there is no *awinja*, and the performance with the ladle does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere.

If the husband has more wives, he is not entitled to conjugal rights with any of them until after the birth of a child the feast has taken place, and he has slept again with the mother of the child. If he would brake this rule, the newborn babe would waste away and die *(omiyo nyathi chira)*.

Adultery is reckoned a serious offence by both husband and wife. If the woman knows that her husband is misbehaving in this way, she will refuse cohabitation, for if she is with a child cohabitations would result in a miscarriage. If a woman commits adultery her husband may send her away, and claim the dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her.

A widow is given in marriage to the full brother or the nearest relation of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she begets children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence, when the girls born to them grow up and get married, the real brother of deceased husband will receive the full dowry paid for them minus one cow for each girl, which cow goes to the real father of the girl for bringing her up.

When the boys born by them grow up and get married they will leave the kraal and build their own apart, unless their real father helps them to get married by paying the dowry.

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days; not even for nature's call. A hole is dug in the floor of the hut, and an old bottomless cooking pot is put over it, and this is used as a W. C. During those 20 days new beer is brewn. When the time has elapsed and the beer is ready, a bull is killed and its hide is dried for the parents of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or migosi)* mixed with water in a small vessel. She dips her finger in it and

795 Lastly, my followers must immediately slaughter all their cattle, sheep, and goats. When this is done, I will provide them with as many more as they want from the Lake." Having said this, the snake disappeared into the lake.

Onyango soon set about spreading his gospel and, as was natural with so attractive a programme, it was not long before he had a considerable following. They were divided into what may be described as two Degrees. The First Degree consisted of those personally "called" [786] in very much the same way as Onyango had been " called." They were all men, mostly older men and the heads of Bomas. The "call" consisted in their throwing some kind of fit, possibly an ecstacy of religious exaltation, during which words poured from them in an un- [791] intelligible torrent. They became the priests and were in tremendous demand as witch-doctors since they soon were invested with, or themselves assumed supernatural powers.

761 For example, they were reputed to be able to recall to life a dying person or one who had just died. The procedure here began with the 795 priest's acceptance of a goat as his fee. The patient, or corpse was stretched on the ground and lightly covered with freshly cut grass, some of which was twisted into a thick rope round the neck. This rope was called " Buombwe."

The goat was next sacrificed and its blood sprinkled over the grass, the while the priest called loudly on Mumbo to save the dying man or to restore to life the corpse—as the case might be, generally with but indifferent success.

795 The Second Degree consisted of all the dependants, male and female, of those especially " Called " by Mumbo himself, and also any other people who, although not specifically " Called," chose to join the cult.

795 At sunrise and at sunset all Mumboites stand facing the sun with the first finger and thumb of each hand meeting to form a circle and 788 held up to the eyes like binoculars. Having gazed at the sun intensely until they are completely dazzled, they stretch out their arms towards 782 it and break into rapid and often unintelligible prayer. This is interesting in that the ancient Luo religion was—and in places still is—that of sun worship. Occasionally when they feel like it they also pray thus to the Lake, and even, it is said, sacrifice cattle, throwing the meat into the Lake to the crocodiles.

795 As was to be expected from a retrogressive religion which not only encouraged but ordained idleness and uncleanliness, it was not long 782 before its adherents, having nothing to do or to think about, began to indulge in unpleasant practices which the normal Jaluo, however 89A uncivilised he might be, held in abhorrence. The communal enjoyment of women, including incest, bhang smoking, sodomy, and even bestiality, all made their appearance, though these practices seem to

795
782
839

have been more common in South Kavirondo whither the cult had spread and had been received with enthusiasm.

795
778

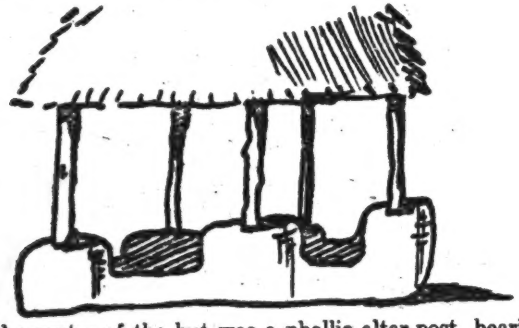
The priests started " schools " which they usually placed on hill-tops, and in the best proselytising traditions, attracted potential adherents by giving feasts of their slaughtered cattle. They also built here and there what might be called groves or places for the worship of Mumbo where sacrifices were made to the accompaniment of many obscenities and dancing.

In some of these Groves were wooden idols, one of which has been presented to the Natural History Museum by Mr. C. M. Dobbs, late Provincial Commissioner for Nyanza Province. This practice of constructing sacred Groves to Mumbo and erecting idols is interesting since all the people who were questioned about this cult said definitely that such things had never been commanded by Mumbo himself. True, he had said that there were to be sacrifices made to him with dancing to the accompaniment of drums and bull-roarers (without musical accompaniment), but he meant them to take place in each boma. No instructions had been given for groves or idols.

An extract from the report of the District Officer who found the idol is worth inserting at this point:—

" . . . .The meeting place of the cult consisted of a beautifully swept enclosure adjoining the High Priest's Boma and capable of seating some two hundred people. From the next boma to that of the High Priest ran a made path, four feet wide and trenched at the sides . . . . The enclosure was surrounded by a well-built dry stone wall. In the centre was a little semi-open hut about six feet in diameter, finished with white mud . . . . There was no door, it appeared symmetrical all round, thus:—

[346]



" In the centre of the hut was a phallic altar-post, bearing traces of blood-stains . . . . The High Priest's daughter produced some unpleasant animal relics from a hole in the wall in the enclosure. In the Western corner a bush plant (Nyaluthkoth) had been planted. . . .

19:Wilson E-5 (ca. 1950) 1960

avoid the immediate consequences and as a result war broke out between the people of Seme and the people of his tribe, Ugenya. After many years of intermittent and bitter warfare the elders of both tribes met to settle the dispute. Their solution was as follows: because the elder who lost his son did not have an unmarried son to take a woman of the killer's clan, and because the killer's minimal lineage did not have a suitable daughter to give in marriage, it was decided that the killer should marry the daughter of the deceased's father, and through her raise seed to the dead man. The killer, contrary to custom but as part of the settlement, was forced to live at the home of his bride and was subsequently adopted into the clan of the deceased. It is interesting, however, that the eponym of the clan which today traces descent from this couple is the bride, Kia, and not the killer or the deceased. It is, to my knowledge, the only clan in Luo which has a woman as an eponym, but then she was apparently regarded as a male by her contemporaries.

This background was given to provide the reader with some idea of the Joluo attitude to homicide. Deeply ingrained is the notion that life goes on after death on earth—that ancestors in the spirit world are able to influence the lives, conduct, fortunes, for good or evil, of their descendants. Ghosts are more likely to be benevolent if they can count numerous descendants on earth and extremely malevolent if life on earth was cut short by violence or unnatural death by war, accident, or suicide. The ghosts of the latter are believed to be more difficult to deal with than those of ordinary spirits of old men or women. The more descendants a ghost has, the higher its status in the afterworld, and therefore the greater its pleasure and benevolence.

The Joluo had developed several devices to deal with cases of homicide. A wife could be married in the name of a murdered youth to raise seed to his name, to placate his spirit and to continue his line for posterity. A young adolescent woman who died was deflowered by a stranger (*jokawiny*)

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

because a ghost of a virgin who has reached puberty was regarded as extremely dangerous. The defloration, still practiced in parts of Luo today, was regarded as satisfying her natural desire to bear children.

The spirits of warriors killed in battle were placated by the tribe as a whole in ceremonial and ritual held at the borders of the tribal land (*thim*) by *poro bilo* and *tero buru*, where sacrifices were made and the tribal ancestors placated to welcome the ghost of the hero. The affair became a tribal responsibility, whereas normally death is regarded as a responsibility of the family or minor lineage segment.

A person who found the body of a man or of a woman would commence wailing as a closely related mourner. If the body turned out to be that of a person among whose clan the finder could marry, then a wife or husband was found for the finder in the belief that the spirit of the deceased planned and directed the discovery of the body to the end that the group of the finder should be united in marriage with that of the deceased.

Witches, if caught in the act of "running about at night," were killed instantly and with equanimity. The body of a person killed as a witch was mutilated by driving a stake into the rectum after which the body would be thrown into its village. An old custom still associated with this is the insistence of the relatives of a woman who died suddenly, or inexplicably, to examine her body for signs of having been a witch. Female witches are believed to be trained by their husbands to run at night with them and, because they are weaker, are frequently caught and killed. Bride-wealth may not be reclaimed or, if not finally paid, must be completed by her husband if a woman is killed under these circumstances.

Accidental deaths are regarded as having been inspired by the ancestors, and therefore require placation of the spirit of the ancestor divined as having been responsible. Deaths from sickness are believed to come from many causes, the chief of

5: Hobley G-5 (ca. 1900) 1903 FL11 Luo FL11
BANTU KAVIRONDO FL44

B 628

suffered an injury at the hands of certain other members of his clan, *e.g.*, has had his wife enticed away or had a cow stolen, he will often proceed to the territory of a neighbouring tribe and lie in ambush, attack and spear the first passer by, likely to fall an easy prey, and will then return home.

In a few days it will leak out that one of the "Wa-so and so" has done this, and the clan of the murdered man will up and wage war with the clan of the murderer, who hopes to obtain his revenge vicariously in this manner; latterly, it is said, it has been done in the hopes that the administration will be induced to punish the clan, and, incidentally, the man who has wronged him.

As a variant of the same line of conduct during the last few years, several cases of suicide have been brought to my notice.

B 762

For example, in Nyole district a young man one day had a violent quarrel with his own mother while cultivating, and eventually beat her with a stick. She ran crying to a village near by, and one of the elders came out and gave the young fellow a thrashing; to every one's astonishment the young man hanged himself that afternoon, and the people of the vicinity told my agent, who went to enquire into it, that he had committed suicide so that his blood relations might lay his death at the door of the elder, and thus start a blood feud against him. Word was, naturally, promptly sent forth that such a procedure would be strongly discouraged, and the incident apparently closed.

MISCELLANEOUS CUSTOMS AND BELIEFS.

L 821

The Ja-Luo believe that the sun goes back to the east overhead during the night, hidden behind the heavens. They use the word *Chieng* indifferently for sun and the Deity. They do not associate the daylight sky with the light of the sun, but look upon it as something quite distinct, and asked what became of it at night. It is known by the term *Polo*. They professed the belief that Europeans were the children of the sun.

L 821 841

They believe that menstruation is caused by the new moon, and also that a woman can only become pregnant at the time of the new moon, and generally that the moon has a great deal to do with the occurrence.

During menstruation a woman does not cook food for others, but merely her own food. She performs all other work as usual.

L 372

The people have no ceremonies connected with fire, such as the extinguishing of all the fires at a certain time, and the relighting with certain rites.

B 845 846 833

Among the Awa-Wanga, many believe that within five or six days of the birth of a child the parents must cohabit, or the child will die. After the birth of twins, the parents are secluded for from twenty days to a month; at the end of the ordained period the brother of the man then formally opens the door of the hut and the couple can go about as usual. This seclusion of the male parent is probably an attenuated relic of the "*couvade*" custom.

584 the negotiations, which is partaken of in a hut, not outside. To this feast three or four friends of each side are invited as witnesses. When the beer drinking stage has been reached, the company sit round the [273] beer pot in a circle, and the provider of the feast takes the long hollow beer-sucker, puts the end provided with a strainer in the pot, takes a few sucks, and then hands it across to the other party with the invitation to drink if he agrees to a matrimonial alliance between the two families taking place. If the second party desires at the last moment [675] to withdraw he declines to drink, but once having accepted the invitation and completed the contract by drinking, it is as irrevocable as a contract can be. The children thus pledged to marry may be so young that the marriage can not take place for years, or the girl may be a child, while the other may be a man already married. The girl so pledged in this way is known in some parts, as in Asembo, as " nyar oseke," " the girl of the beer sucker," and the Luo have no stronger matrimonial contract. It is hedged about with potent penalties, 584 mainly magical, in case of any breach of the contract by either of the 789 parties pledged. But even this most binding of all binding contracts is not invariably kept. Occasionally a girl will not submit to the fate marked out for her, and if she can find a man brave enough to join his fortune with hers, they undergo a ceremony, the essential feature of which is the drinking of " medicine " called " manyasi." This is supposed to render harmless the evils which would otherwise befall them.

789 Women are by no means so helpless when bound to their husbands as many are inclined to believe. *In some ways* wives are in a stronger 593 position than are women in lands where magic is not believed in. Luo women have many weapons in their armoury, by which they can bring their husbands into subjection, or perhaps I ought to say, something like subjection. I cannot find that these weapons are resorted to frivolously. A woman has to be hard pushed to bring them into play. One of which we hear a good deal is a curse debarring cohabitation. It is very simple in operation. Striking her thigh with her open palm, the wife vows never to cohabit again. The striking of the thigh is essential. Once this is done dire penalties, sickness of himself and children, will result if the husband attempts to force consent. The fat is now truly in the fire, and the husband has to come to terms with his wife. When he has succeeded in mollifying her " manyasi," the medicine already mentioned, is drunk to break the curse. At this 241 stage of social development a belief in magic does serve the needs of ● 841 women in certain circumstances. She has powers in connection with agriculture which can be devastating. For instance, during her menses no woman must sow seed. In the family of a polygamist lesser wives dare not approach the " mikayi " or chief wife to share in the labour at this time. Such contact with the seed would prejudice the crop.

241 Similarly, during this time she must be careful where she walks. She
● 841 can ruin a crop by walking through it. But, of course, in this case, she would suffer with the other members of the family.

462 From early childhood the girl is brought up as an agricultural
787 labourer. There was no class of women divorced from the soil. The
791 only class whose labours in agriculture were lightened were the women who belonged to the divining cult of " SEWE." Sewe is the spirit of divination and is supposed to have descended on those who have been delirious in illness. The delirium is the sign of possession. The devotees of the cult are mainly women, and they are a fairly common sight as they go about their avocation. They are skilled beggars as
[301] well as diviners. With their bodies festooned with strings of beads, shells, bells and other barbaric ornaments, they pass from kraal to kraal, and standing with their bodies leaning forward supported by a
[431] hand resting on a short stick they sing songs of the countryside and and are rewarded by presents of small baskets of grain. In this way women who have been ill are enabled to help to replenish the grain stores, which have probably run low during the illness.

241 Gradually a change is coming over the life of the women, due to
177 white influence. Ploughing by the men with teams of oxen, is setting women free for other tasks. This movement is by no means wide-
252 spread, but it has begun, and its effect on the women has been great.
462 Even if the husband has no team and plough himself, many wives do not rest content until the husband has hired a plough owner to come along and plough up the land. It is not unusual for ploughs to be taken 15 miles for this purpose. Again, the use of hand mills of the " Colonist " type, is easing women of much labour at the grind stones. These are much more common than ploughs, probably there are twenty mills for every plough in use. This is partly accounted for by the fact that the mills are turned by hand power, not by oxen. At this labour girls and women take their share, but whereas you would never see a man down on his knees at the grindstone, you do see them turning a mill. New activities are employing the time of many women, and those who have learned to knit or make palm mats in recent years are rapidly increasing in numbers.

CHILD LABOUR:

857 Generally speaking, from early childhood, all are required to make some contribution to the activities of the home. Girls for the fields, and boys for herding, is the broad division of labour, though the boys also lend a hand in the fields, and, very occasionally, a girl or woman may be seen herding. With the opening up of
593 avenues of wage-earning to the boys on coffee and tea estates, and in
[464 other forms of employment, the male child is being made by impecuni-
651] ous parents to make his contribution to the family hut tax.

B 553

of the baby, if a boy, and round its left wrist, if a girl. Next morning, the body and head of the quail are cut off, leaving the lower half of the beak of the bird suspended by the string round the child's neck; everyone then knows that it has been named.

Names are often suggested by some event happening at the time.

Mumia was born on the day of an attack by the Wamia or Elgumi people, and was thus named Mumia. Formerly, again, when Europeans were great rarities in the county, if a child was born on the day a caravan camped at the village, it would often be named after the leader of it, if he chanced to be well known, thus "Jaksinis," "Martinis," and "Obiloe"[1] are very common.

Tattooing and Tribal Marks.

L 304 [847]

These rarely appear to have any special significance, but, among the Ja-Luo people, it is thought that a woman will not bear children unless she is tattooed.

All Kisumu girls are tattooed just below the navel (Fig. 8). When, however, a woman first becomes pregnant, more elaborate tattooings are added in front as far up as the breasts, and a belt of markings is carried right round the waist. All the men are not marked, it is quite a matter of choice with them. For instance, the head chief of the Kisumu people is not tattooed.

Fig. 8.

The various tribes of the Ja-Luo have slightly differing tattoo marks.

B 304 [833]

Among the Ketosh, if a warrior kills an enemy in warfare, on his return he has two rows of round marks tattooed on his right chest and continued upwards over his right shoulder; moreover, upon reaching home, it is considered essential that he should have connection with his wife as soon as convenient; this is believed to prevent the spirit of his dead enemy from haunting and bewitching him.

The Turkana and Suk tattoo rows of spots from the chest over the shoulder, but whether this is significant of the warrior having killed an enemy or not, is not known.

An examination of the Ketosh language affords reasons for believing that there is a strain of Koromojo or Turkana blood among them, and this peculiar tattooing custom may be additional evidence of the affinity.

The Ketosh women have a number of raised dots tattooed on their stomachs and abdomen arranged regularly in chess board fashion. An irritant is rubbed into the cuts to produce weals.

When A MAN MARRIES

591 a second or third wife, he may select another place for his new wife, either in the village near his former wife, or he may elect to take her to some other village. A man who has wives dwelling in different places lives with them in turn. Married
586 women are careful in regard to their relations with men. Should a woman be lax in her behaviour or encourage men to visit her, her husband will send her back to her parents and divorce her.

842 A wife who is proved to be sterile is not divorced, but her
595 parents send her sister to become the man's wife, and he is expected to pay another sum as a marriage-fee for her; but there is no stated time when the sum shall be paid after the woman goes to live with him. The former wife continues to live with him as his wife.

291 **Distinctive dress of married women.** Each woman after marriage makes a girdle with a long fringe at the back and ties the ends together, which gives it the appearance of a tail. The girdle is worn constantly during the husband's life-time,
[165] but, should he die, she takes it off and puts it on the house-roof over the door during the season of mourning to show that she is a widow and is mourning. After marriage a wife scarifies
304 her sides and back in addition to the scarifications she made at puberty. When a woman has a son born, she makes a
352 clay-mound in the middle of the floor in her house for the
852 food pot to rest on when the family are at meals.

Birth customs. A wife who expects her confinement calls
844 in an elderly woman to act as midwife. This woman is a person who has had experience in such matters and is herself a mother. When the child is born, the midwife cuts the umbilical cord on an axe handle if the child is a boy, and on a hoe handle if it is a girl. The placenta of a boy is buried outside on the right side of the doorway and that of a girl on the left side. During the first three days the father remains near the house
846 in which his wife and child lie, but the midwife alone enters and attends to the wants of the mother and child. On the third day the father takes a fowl and rubs it on the child's chest and turns it loose, when it becomes the property of the child. When the new moon appears, the parents bathe, and

Some Customs of the Luwo (or Nilotic Kavirondo) living in South Kavirondo.

By the Rev. H. Hartmann.

Contents:

Birth. — Betrothal and Marriage. — Burial of a married Man. — Burial of a Woman. — Burial of a Child.

Birth.

The Luwo people live together with their families in kraals. These families consist of the owner of the village with his wives, and his sons with their respective wives and children, and the owner's unmarried daughters.

Each wife has her own hut. The husband spends most of his time in the hut of his favourite wife. He may, however, have besides a hut for each of his wives, a small hut for himself, but he will never sleep in it. For this purpose he goes to the huts of each of his wives in turn, or generally he sleeps in that of his favourite wife, and visits the others, whenever he is informed by the women that one of them has menstruated, then after 2 days he goes to her hut for a couple of nights.

If a woman has conceived and happens to be one who has not brought forth yet, then 3 or 4 months after conception she gets little incisions *(kodo)* made all round the waist. For this operation the patient has to sit down on a stone (nothing else). The operation is performed by an older woman. She uses a crooked thorn which is hooked under the skin, and where the point of the thorn lifts the skin a very tiny cut is made with a native razor. Between every cut there is a space of about $^1/_4$ of an inch. Three rows of incisions are made this way all round the waist just below the navel, the rows being also about $^1/_4$ of an inch apart. No medicine is applied.

When the skin is healed again the woman goes home for 3 days to show herself *(nyo kodo)* and a goat is killed for her by her father. She returns with roasted *wimbi* flour for brewing beer and a sheep. When the beer is ready the sheep and some chickens are killed and they have a feast *(kong kodo kodo)*.

After the feast the young woman gets from an older one some medicine, the ashes of burnt herbs, of which she has to taste a little morning and night for one month *(nudgo mindo)*.

When this month is over she gets another medicine, prepared out of cooked roots of plants *(yath ogolo)* which she takes morning and night until one month before giving birth.

In case a woman who is with child has committed adultery she takes a certain medicine, called *manyasi*, otherwise she will have a miscarriage or the child will be a weakling.

When the hour of childbirth has come the woman sits down on the floor of the hut naked. Even the usual string of beads is taken from her waist. A

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

with their buffalo-hide-shields and spears singing all the time. Meanwhile the heads of all the people of deceased's kraal except his wives are being shaven clean, whilst for this purpose they, in turn, are seated on a log of a thorn-tree, which is put across the main path leading to the village. 765 [302]

On the third day a billy-goat is killed and the meat is cooked and eaten by the women and girls of the kraal only, and an old woman gets the skin of the goat as a new skirt.

On the 4th day the relations go to the grave again and sweep it *(yweyo lit)* with a special kind of grass, putting some earth of the grave in an old basket. This is put in the middle of the path leading to the village, together with the log of wood (stride) which deceased used to rest his head on when sleeping Nobody will afterwards touch these 2 articles; they are left there in the middle of the path. People will in future go past them, making a curve round them. — This explains why one very seldom finds a straight path leading to a kraal. — The hoe, which was used in digging the grave, is given to an old woman of an other part of the district, but the hoe handle is thrown away. Then all the relations living away from the kraal, and all the neighbours go home. [513]

When they have gone, the stick on top of the deceased hut, and those on the huts of all his women are broken by the grandchild of deceased or by some other small boy. This is a sign to anybody that the occupants of those huts are mourning.

After about two months the wives of deceased go to the village of their parents where they stay for two days, and a young bull is killed for them in honour of deceased. Before the wives have been home, they are not allowed to sleep anywhere but in the deceased husband's village, except under extraordinary circumstances, e. g. if a woman is not able to cross a river on the way home; in such cases she may sleep in another village, but only in the hut of an old woman. If she would break this rule, then the woman in whose hut she slept would not bring forth any children. [842]

Six months later beer is brewn for all the relations and neighbours, who come for the occasion. That day the grave is smeared with mud *(mwono lit)* and the women get their heads shaven for the first time since the death of their husband. Now also all the wives of deceased are disposed of; they go to either the brothers or the cousins of their former husband. The time of mourning is finished and the sticks are replaced on top of the huts by the same boy who broke them off. That night however the women sleep on the bare ground. That day the women wear new white tassels on their backs. These tassels are made as usual from the twisted marrow of papyrus stalks or of sisal-fibre. For since the death of their husband they have left off their ordinary tassel, which they replaced by a coarse untwisted one, made of the fibrous bark of the wild fig-tree. [291]

Then new huts are built for the women, if their new husbands live in another village, and when these are ready their former huts are broken down. If their new husbands live in the same kraal they keep their own huts, except if deceased was buried inside his hut. In this case a new hut is built and the old one is allowed to collapse over the grave. If deceased was buried in a little hut built over grave, then this hut is left till it tumbles down by itself. When later on somebody gets 768 769 753

231 Old cows which have stopped producing are usually killed
[837] and their meat exchanged for millet or maize which in turn
is bartered for new young heifers, bulls, goats or sheep, or if
764 necessary used for consumption. The same applies to oxen
although these are usually exchanged directly for other stock.
A heifer is usually worth two bulls or young oxen. The special
oxen used by their owners as companions when they attend
funeral mournings are seldom exchanged, but are slaughtered
when they get old, the owners preparing special feasts as a
tribute to their past service. A young man who has ridden a
special ox at funeral dances does not eat the meat when the
ox dies as a result of disease or accident. These "companions"
are usually honoured by having bells fixed on special leather
straps fastened around their necks. Some he-goats are also so
honoured. The ringing of these bells will sometimes stop
hyenas from entering the kraal and may help in tracing animals
when grazing in bushy country. The ears of the owners are
usually sensitive to the sound of the bells of their own oxen.

231 The Luo do not like polled cattle because some of them
believe that such animals are unlucky. They say that if a
● [842] polled animal is paid as part of a dowry the woman is likely
to be sterile. They are very fond of oxen with long horns or
those with peculiarly or funnily placed horns. During drinking
parties the owners of such oxen "show off" by placing their
arms in different positions to demonstrate the directions of the
[556] horns of their oxen. This performance is a sign of wealth
because the average man does not possess a number of oxen
with abnormally-placed horns. Long-horned cows are not of
special value. The horns of dangerous animals are cut so as to
reduce the risk of people and young animals being horned.

Beautifying animals by branding which is practised by
some African tribes is not favoured by the Luo. The only
method that is used to increase the natural beauty of cattle,
[232] especially bull calves, is to trim the ears. Trimming is, however,
also done as a treatment for east coast fever because in this
disease the animal appears dull and heavy as if suffering from
headache, and the Luo believe that by letting a little blood
from the ear the headache is eased.

231 Luo cattle-owners do not usually go in for special colours,
but there are some colours which are considered objectionable.
822 Pure white is not liked because white animals are usually
susceptible to skin diseases, accidental skin lesions and to
marking by tick-bites which usually remain permanently
conspicuous. Another objectionable colour is striped, dark,
dull-brown. Animals with these mixed colours are not accepted
for dowry because the disagreeable colours may cause disagree-
ment during the arrangement of the marriage or between the
wife and her husband. Brown is unanimously favoured because
it is considered resistant to skin diseases and accidental injuries.

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

the herds and, by emulation of the age group next above them, slowly acquiring proficiency in the typical adult male pursuits, while the girls are drawn into the domestic tasks of the elementary family, food preparation and cooking, fetching water, and minding babies.

The young boys of a play group sleep together in the goat hut of a homestead when they no longer share their mother's hut at night. The girls sleep together in the hut of some widow of the group who is past childbearing age. This is the most important institution for the transmission of female culture. Girls only leave it at marriage, and till that time they are continuously trained in the adult roles expected of them. Boys at puberty build themselves bachelor huts (Dholuo *simbi*) in which they sleep and where they also entertain their girl friends. A group of young men makes a formal assignation with a group of nubile girls from a segment of another maximal lineage into which marriage is possible, and visits and entertainments are held to and from the one lineage territory to the other. The two groups pair off with one another into sex partnerships which last till the groups break up and reform. A youth graduates out of this company of *simbi* age-mates at marriage.

Authority over children rests jointly with the parents. That of the mother is likely to be the most effective in the early years, and she always holds a strong sanction in her manipulation and control of the food-supply. The father is ultimately responsible for the order of the family, and his discipline is stronger than the mother's as the children grow older. There is a relation of friendly intimacy between alternate generations. Children are on easy terms with their grandparents and will certainly use the latters' households as an escape from home discipline or as a more generous source of food if need or opportunity arises. Children are at no period encouraged to live away from home with other relatives, but parents allow them to circulate freely among a number of homesteads wherever they find the best welcome and the most plentiful food, among families which are usually both neighbours and close agnatic relatives. Brother and sister have no material reasons for conflict and there is a strong and lasting bond of affection and reliance between them, institutionalized in the symbolism of a number of ritual occasions, and linked to their important later relation to one another's children as mother's brother (*senga*) and father's sister (*sayia*). Apart from parents, these are the only two consanguine relatives of the first ascending generation who are picked out by special kinship terms. The newly married woman is under the authority of her mother-in-law, and a man's relation to his wife's parents is marked by deep respect and avoidances. Ritual practices as well as personal attitudes emphasize the importance of fertility and virility,[1] and the value attached by a man to a numerous offspring and the ability of his wives to provide it. The Luo are aware of the male and female parts in procreation, but say that 'the woman's blood goes for nothing'. This seems a necessary inference from the nature of lineage organization rather than vice versa, for they would not argue that there is any tendency for children to resemble the father rather than the mother, nor do they permit marriage with close consanguine kin though of an unrelated lineage. It is

[1] e.g. the special rites which have to be carried out for a nubile girl dying unmarried, a wife dying without children, a widow dying before remarriage, a man dying when one of his wives is still childless, or a man dying before he has experienced sexual intercourse, the latter being treated similarly to a barren woman.

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

said that since property has passed to the lineage of a wife it has no claim on her offspring, consequently they take their father's lineage affiliation and can always be claimed by him because they result from his semen.

The Luo conceptualization of primary kinship attitudes is in conformity with the patterns of actual behaviour briefly outlined. The relation of co-wives is visualized as one of jealous rivalry. The term for it in Dholuo is *nyiego* and co-wives refer to one another as *nyieka*.[1] From co-wives themselves this relationship tends to spread to the elementary families of which they are the female heads. Children stick up for their mother's rights over against those of a stepmother. They stand to gain all round from successful competition with the other elementary families of their homestead. This is not of great permanent importance to the daughters, but the sons have everything that is worth while to gain or lose in their rivalry with the groups of their half-brothers. Their inheritance of the most valuable and essential property—livestock and land—depends on the allocation made by their father between the elementary families. But for uterine brothers it also depends on the allocation made between them within their elementary family. Consequently uterine brothers have material reasons for competing with one another, and also for combining together to compete with all other groups of uterine brothers in their compound family, being reinforced in this solidarity by the coincidence of their mother's interests against her co-wives. These pivotal relationships within household and homestead are conceptualized by the Luo as the origin of lineage structure. It might be objected that the orientations noted here are of a kind which naturally tend to be latent in any polygynous family system. The point is, however, that such orientations not only occur in the Luo family but are expected to occur; that the pattern of residence, the kinship terminology, the general conduct of family affairs, and the usual behaviour of its members all reflect this particular alinement rather than any other of a number of alinements possible in polygynous families, and are consciously thought to do so.[2] The main features are represented diagrammatically below (see p. 21).

It is impossible, within the space of this article, to give a full account of marriage types and contracts, the system of inheritance and of succession to property and authority, exogamy, blood-feuds, ancestor worship, and the like. All these matters have a bearing on lineage organization, and I try to give here a brief general account of them, sufficient only to make clear the nature of their connexion with the other material presented.[3]

Exogamy is an attribute of the maximal lineage.[4] This study is mainly concerned

[1] *nyiego* v., to snatch suddenly, or take by surprise; *nyiego* n., the relation of co-wives, jealousy; *nyieka* n., my co-wife, my partner in jealousy.

[2] In fact there are great similarities in this respect with the family structure of the Kikuyu, Kamba, and other East African peoples, but unfortunately the material on them does not tell us to what extent it is reflected in their lineage systems. Compare also Mayer, op. cit., p. 6. The most valuable comparative treatment of family structure from this angle is that of Fortes, *The Web of Kinship among the Tallensi*, cap. iii, and *The Dynamics of Clanship*, pp. 195–6 note and p. 198.

[3] For further details see Paul Mboya, 'Luo Kitgi gi Timbegi' (*East African Standard*, Nairobi), an English translation of which is to be published under the auspices of the East Africa Literature Bureau. See also Evans-Pritchard, 'Marriage Customs of the Luo of Kenya', *Africa*, vol. xx, 1950, p. 132.

[4] A Luo maximal lineage, as the most inclusive agnatic descent group based on an accepted and putatively continuous genealogy, may coincide with 'clan', or it may be a segment within it where clan refers to a group united by a sentiment of common descent without this explicit genealogical basis.

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

762 the village, she would be teased and chided pleasantly about
159 the fact that he was her future husband. Perhaps she would
584 have been married sooner, had her future husband, Opala, not been employed in a city many hundreds of miles away. He returned on his long leave to consummate the marriage at the time when the girl had just finished her secondary education and was about 18 years of age.

While at school, however, Akech had fallen in love with a teacher, Okare, in a neighboring technical school and he was determined to marry her. He went to her father and pleaded to be allowed to repay the bride-wealth animals her father had received years before and to complete the bride-wealth payments to marry the girl by Luo law and custom. Opio adamantly refused, and her brothers threatened Okare with physical violence if he should try to see the girl again. Okare was heartbroken and returned to his place of employment. Akech, however, had other ideas. When she was told that the date of her wedding had been fixed, she pleaded and tried every traditional way of breaking the marriage, but was unsuccessful. Her father and her prospective husband remained adamant.[1]

159 The night before the wedding, she ran away from home to
762 join Okare at his place of employment. Both knew that they
584 would be pursued by the girl's brothers and by her father, so
684 they hired a car and fled to the boy's village in a distant Luo tribe, some 200 miles away. Her father, brothers and future husband pursued the lovers to Okare's village where the father had him arrested for taking Akech from his custody. Okare's brothers, however, took the girl to Nairobi to hide her pending the result of the case. One of the brothers was then arrested for aiding and abetting the elopement.

Now the essence of this case goes to show that the father

[842]

[1] By tradition, a girl may run off to the home of a "bride" [illegible] to marry will produce sterility. She may climb a tree *bondo*, an *euphorbia*, which is believed to be closely associated with the ancestors. There are several other ways, all of which would cancel an ordinary wedding, but none is effective in the case of *nyar kiseke*.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

this attitude that unmarried girls, as they grow older, are often forced to marry in the end by taking advantage of the institution of polygamy, which acts as a final method of absorption. Although she may live to an advanced age, a single girl is continually tormented by the fact that society does not approve of unmarried girls.

Restrictions. Traditionally, a mature girl is not allowed to enter her father's or her mother's sleeping place, especially if the mother is still giving birth to children. This restriction, although generally ignored by Christians, applies also to the wives of her uncles. Those who are her parents or parents by marriage do not go where a girl receives her male visitors. By custom this hut was built beyond view of the parents' huts and served as a sleeping place for boys. It is considered that a girl who has commenced associating with men should not enter her mother's or father's hut because she would interfere with their powers of reproduction.

Relationship with brothers. The fear of incest has led to the practice of keeping young women's activities as separate as possible from those of their brothers, but free association and conversation concerning their mutual interests generally takes place, since brothers and sisters retain an interest in each others' love affairs. From his sisters, a young man may be informed of things he wishes to know about his girl friend.

Pre-marital pregnancy. Cases of pre-marital pregnancy were very rare in the past, according to most of my informants. But this rarity was not due to the fact that sexual relationships were prohibited. Pregnancy among mature girls was apparently not infrequent from any strict moral code, but from the conscious effort of the girls themselves to guard against it. Because much importance was attached to virginity, it was a matter of personal pride and was carefully guarded. It was a great honour and a

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

Childless marriages. Failure to have a child is a great disaster in the home. The idea of the perpetuation of their kind is so deeply rooted in the minds of the Luo people that a childless marriage generally culminates in the breaking up of the home concerned, the husband usually being advised by his relatives to marry a second wife. Although results may prove that it is the husband who is defective, priority is always given to men to prove their fecundity. Thus a woman is forbidden by the social conventions to attempt to prove on her own initiative that she can give birth to children.

If through the second marriage the husband is proved to be sterile, his wives may one by one desert him. On the other hand, this great desire for children may lead him to carry on his name through the secret offices of the woman's brothers-in-law. Otherwise he must face the inevitable fate of having his family broken up.

Women's diet after birth. For the first week after childbirth, the mother's food is limited to gruel, fish, and green vegetables. 'Bo', which is one of the vegetable pulses, is excluded on account of the trouble it gives to the stomach. During this early period meat is not eaten because most women complain that it makes the stomach tight. Hard food, such as boiled maize, is also avoided at this time. Although tea and coffee are occasionally drunk by the more fortunate families, the drink which pleases women most at this time is gruel. They are allowed to take a lot of it as people believe that it helps in the formation of the milk which is so important for feeding the new baby.

The period of this considered treatment is brief, lasting for about a month at the most. Much depends on the economic resources of the family concerned, and the poorer the family is, the shorter is the time that careful attention can be given.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

512 462 264 [853] [356] *Daily rhythm of family duties.* The daily programme of a mother with a young child is divided into two major phases, corresponding with the morning and the evening meals. In the morning the activities include the preparation of gruel for the child, preceded by suckling it and sweeping the house. When prepared, the gruel is left with a nurse, to be given to the child when it cries. The mother then goes to the field or to any major work of the day. Preparation of the morning meal begins at about 9 a.m., and by 10 a.m. the family disperses again, the men perhaps to herd cattle or to go to market, and the women to fetch firewood or bring water from the river.

[178] The idea of having a meal freshly prepared in the morning is of recent origin. In the past, people ate cold food preserved from the previous evening meal. A great proportion of what is eaten during the week comes from the gardens.

[178] In former days, women were expected to prepare an afternoon gruel for their husbands at about 3 p.m. This is still the custom in some families, but modern women are quite ignorant of the practice in its traditional form.

858 613 *The social attitude towards male and female children.* The difference in the social attitude towards male and female children arises from considering them in relation to the future of the lineage to which they belong. A male child is looked upon as a dynamic element in the lineal structure. On the other hand, a female child, though a potential source of wealth, is regarded as an exporter of fertility from her parents' lineage to the lineage of her husband. Thus, if she becomes the mother [842] [593] of many children, her larger numbers are looked upon with disfavour as taking something away from her original family. This results in a superstitious feeling which affects her visits to the parental home.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

Although a larger number of males would normally be preferred, a family of exclusively male children is regarded as a disadvantage because of the economic burden incurred when the sons want to marry. But when a father has only female children, his position is considered as 'dead', for a family is only considered as living when there are male members to perpetuate the line.

858
842

The Social Environment

Lineage. Social relationship among the Luo is determined by the strict manner in which their society is organized. Since the social structure follows a system of lineage (*dhoudi*, pl., *dhoot*, sing.), the exogamous limits or the limits within which intermarriage may not take place, depend on the relationship between these lineages. When relationships are close, the lineages unite through their dead originators until a common ancestor is reached. The lineages continue to grow, thus stretching the distance of relationship further and further. The breaking of the rule against intermarriage depends on the attitude of the living members of the lineages and the distance between them and their ancestors.

613
582

In addition to the regulation of matrimonial relationships, the structure of the society also determines ritual observances and funeral ceremonies among the Luo, while the relationship between the different lineages is characterized by competition, which is often a feature of polygamous homes.

613
595

Family relationships. The difference between monogamous and polygamous homes is found not only in the status of the women, but also in the psychological attitude towards the parents resulting from the husband and wife relationship. Although it is generally assumed that the focus of family life is the father, the degree of

595
594

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

would have supplied sufficient food for the whole village (about 50 people) for 3 months. — When all the beer is finished the bridegroom's father asks his host whether his son may now build his wife a hut, and whether she may stay with him definitely. The worthy parent will answer: "No, not yet, because the heifer for the father of the girl *(roch wuoro)* is to be brought still."

Now the relations of the bridegroom go home taking a hindleg of the cow along, which is to be carried by the bride. But she will say: "It does not behove that I should walk along the road with my father-in-law; I will come later." Somebody of the party carries the leg, and she follows next day. Henceforward she is allowed to enter her mother-in-law's hut, where she does the cooking for her husband, and stays no longer in the simba. Unless she is with child already she goes home again after a few weeks, because her father has not quite released her yet, and she still plays about with her girl-friends.

When her husband has found the heifer still wanted by her father, he takes it to him. Again he asks leave to build a hut for his wife. If the father agrees he returns with his wife and starts building at once. The woman stays with her husband definitely, for the full dowry has been paid.

Some time later the woman's father brews beer and sends word to his son-in-law, who gathers his brothers and friends to go to this beer party *(kisech kongo)*. All of them except the husband himself go to the hut of his mother-in-law, where the beer stands ready. Not until he has given her either a goat or a sheep is he allowed to enter. This animal has to be handed over not by the husband himself, but by a relation of his. With this beer party the full marriage ceremony ends.

The woman, though she has her own hut now, goes on cooking in her mother-in-law's hut. Five months after she has conceived she has regularly to take *yeath agulu* which medicine has to be warmed up every time before taking it. This she does in her own hut. However, the evening before she boils this medicine for the first time, the children of the kraal pick some vegetables and cook them in the woman's hut. This is the first food cooked there. Both husband and wife, and also the children who cooked them partake of these vegetables.

From now onwards she cooks all the food in her own hut, but her husband is not allowed to eat any of it yet. He goes for his meals to his mother's hut. After about 4 days the woman goes home once more to fetch a goat for her husband. With the goat and also some other meat and fish she returns to her husband. When this food is cooked she calls her husband and the men of the village for a little feast. On this occasion she gives the goat to her husband, thereby sealing the contract with him *(criso chwore)*.

Burial of a married Man.

In the olden days the death of a warrior was considered to be brought about by some enemy through witchcraft. This death had to be revenged. So the very next morning, before the man got buried, people got ready for a fight, and went out to the boundary of a hostile tribe to wage a war against them. No sooner was the warcry raised or the hostile tribe got ready too, and came to the boundary. Both parties took some of their cattle with them. After the fight the victorious party took the opponents cattle as spoils.

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

is a most important grouping intermediate between the compound family and its individual members. It is a semi-autonomous domestic unit with its own kitchen economy, its own property rights in cattle, goats, sheep, chickens, land, tools, granaries, and food stocks. Correspondingly it is responsible for its own building and repairs, fuel and water collecting, food provision and allocation from harvest to harvest, and has its own ritual rights and obligations. But the husband is an element common to them all and, having his own rights and duties in respect of these matters, binds them closely together. Livestock are herded co-operatively, not only for all the elementary families of a homestead, but for several homesteads together. The husband is the titular head of a corporate group, not an absolute rightholder.[1] He allocates land, cattle, and other property accruing to the compound family group among its elementary families, and this allocation limits the proportion in which it will eventually be inherited by the sons in each elementary family. He is also able to make levies of property for special purposes from all his elementary families. But in all situations involving social groups wider than the homestead, its head is subject to the decisions of the leader-in-council of the lineage segment to which he belongs. The exclusiveness of elementary families is potentially high, but in practice depends on the skill of the homestead head in securing and maintaining harmony, and on the natural compatibility or otherwise of co-wives. When these factors favour, co-wives may be seen co-operating in many tasks, taking it in turns to supply the husband—or one another's children—with food, combining as a team for garden work, or sharing one another's water-supply. But it cannot be denied that the Luo regard friction between co-wives as being a more normal state of affairs. Behind these situational variations lies the invariable right of the husband to regular cooked food from each wife, of each wife to regular sexual attention from the husband, and the general responsibility of each elementary family for its own self-maintenance granted its rightful assistance from the husband in his proper part of each task.

The rearing of children is woven into this framework. The baby's first contacts are naturally with its mother, who may not finally wean it till it is about two years old, unless as a result of a subsequent pregnancy she has to do so sooner; for suckling a child with a younger sibling in the womb is regarded as robbing and endangering the latter. The baby sleeps in its mother's hut at night and sleeps and later plays near it during the day. It is most closely associated with the other members of its own elementary family, especially the female ones circling round the hearth for the preparation and cooking of food. Other members of the compound family will be hardly less well known from their presence together inside the homestead hedge, but all non-members of the homestead will be comparative strangers except very close relatives or near neighbours who are constant visitors within it.

Babies of either sex are soon each put in the charge of one of the older unmarried girls, probably a real or classificatory sister. This brings them in contact with the world outside the homestead, where a number of these nurse-girls (Dholuo *jopidi*) meet regularly in informal play groups. By the time children can run about on their own they too form play groups, including both girls and boys from several homesteads. Gradually the interests of the two sexes diverge, the boys going off with

[1] The Luo homestead in all phases of its life-cycle would sustain the definition of a corporate group in Weber's sense. See *Theory of Political and Economic Organization*, p. 133.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

economy by handicrafts and exchanging pots and baskets for corn.

The introduction of modern household goods of a more durable nature has lessened women's chances of earning money through weaving baskets or making pots. The overcrowding of land has also meant an increased economic dependence on men. To satisfy family demands, most women engage in some kind of business transaction which often keeps them out of the home from morning till late in the evening. Although motor transport has improved these conditions, children have been unfavourably affected through neglect during the mother's prolonged absence. This change from sedentary occupation to long-distance travel has taken place since the coming of new economic standards, and at the moment it is very rare to find a woman who does not trade in a small way.

Women and the Birth of Children

Customs and taboos. The customs and taboos observed by expectant mothers merely reflect the social attitude of Luo women to the birth of their children. Thus the aims of the customs and taboos can only be appreciated in the light of a social desire for the woman to give birth without difficulty. Fundamentally this is also a basis for the disapproval of the birth of twins, and also of abnormal deliveries.

Concerning the persistence of the marital relationship during pregnancy there is no generally accepted restriction. But while custom varies from person to person, any sexual relationship continuing after the sixth month of pregnancy is regarded as excessive. The only social stigma attached to sexual relationship continued for the greater part of this period, is that it may provoke an open rebuke from the midwives or other women. Thus while no hard

[Text continues on p. 57]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

and fast rule can be placed on the time of the temporary termination of the marital relationship, it is generally left to the good sense of the men and women concerned.

The regulation of the diet. Here again the restrictions aim mainly at minimizing the chances of the child being too big, thus rendering it easier for the mother to give birth. Among the foods which women normally eat, bananas are eliminated during pregnancy because of their supposed fattening effect upon the child, and the danger of thus causing a difficult delivery. Among the most conservative women, pumpkins are placed in the same category with the additional belief that, since their contents are mostly water, they have a weakening effect upon the child.

Sugary foodstuffs such as canes, sweets, sugary tea or coffee are among the things which expectant mothers do not eat. Women believe that these foods produce babies so fat that they put a strain on the mother's strength. For the same reason, the excessive drinking of gruel is prohibited, and hot gruel is especially avoided on the grounds that it would scald the baby. But while these restrictions are adhered to in principle, in actual practice women with a strong liking for forbidden foodstuffs do not refrain from eating them.

A factor of great psychological significance is the belief that Luo mothers begin to yield to the will of their babies long before they are born. Among them are some who, during pregnancy, develop a habit of eating dried mud and other peculiar foodstuffs, one baby causing a mother to eat these and the next turning her appetite against them. These strange habits of eating are attributed to the will of the expected child; and it is believed that the domination of the child over the mother, enduring through the early part of its life, begins in the period of pregnancy.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

843 262 Dietary restriction may also be a matter of family habit or taboo. Thus a mother may inform her children while they are young that a certain kind of food is not to [753] be eaten by members of their family. This restriction may result from a fear of spreading certain diseases, generally skin ailments, latent in that particular family group. The restriction does not apply to others who are free from the supposed disease. When a woman gives birth to a baby her habits in these respects do not change.

[756] A dietary restriction may also result from the instruction of a medicine man, as in the case of a woman who has had no child for a long time. During his treatment [784] the medicine man gives instruction on taboos and compulsory dietary restrictions. Dislike of a certain food during pregnancy may also result from personal disagreeable experience. This is also generally assigned to the will of the child. Restraints of a family origin, as well as those imposed by the medicine man and acquired from personal experience, are more strictly adhered to than the traditional restrictions.

843 278 177 *Medicinal restrictions.* The list of medicines that expectant mothers may not take is a small one. Apart from the traditional strong purgatives and medicines for killing worms, modern drugs like quinine and strong European laxatives are eliminated, such measures being designed to prevent abortion or premature birth.

843 [177] [516] *Social relationship.* Superstitions affecting expectant mothers have very largely yielded to the influence of Christianity, but we find remnants of old regulations, such as those connected with sitting, still observed by women. An expectant mother is required to sit with a straight back. Neither should she put one of her legs on top of another, because it is believed that the expected child in assuming a similar position would be difficult to

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

deliver. A person standing behind an expectant mother may also be driven away in the fear that if that person's birth had been difficult the birth of the coming child would be equally difficult. Social regulations connected with greetings are found among the pagans and these may result from the instruction of a medicine man. Thus he may prescribe the length of time in which an expectant mother is not allowed to greet those whom she happens to meet on the road.

Although in the family circle a woman is not allowed to overwork during this period, conditions are such that, if left to themselves, they continue with very strenuous work until the time of birth. In the past, expectant mothers stored food which they ate after giving birth. These foodstuffs might be dried meat, dried fish, ghee, and corn for gruel. Nowadays the availability of fresh meat has made it possible to supply women with sufficient food even although it is very expensive.

The amount of rest given to an expectant mother depends on the husband's position in society. With the poorer families, hard work continues till the time of birth. Thus, at one time a woman called Andege took some ripe bananas to Kisumu in the morning, returned at about 2 p.m., and at 4 p.m. gave birth to her daughter, Rapuoda.

Guessing the child's sex. In guessing at the child's sex before birth, the mothers generally rely on past experience. It is recognized to be very difficult, and even impossible, to predict the sex of the first child. Certain guesses depend on the health of the mother, though such guesses are not made public. For a male child it is believed that the mother should be thin; with a female child, the reverse, and these views are probably based on the assumption that male children sap their mother's energy to a greater degree. This is likewise the basis of

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

843 [846] the custom which confines a female child in the hut with its mother for only three days, whereas a male child would stay with its mother for four days, thus giving her a longer rest. In reality, only those women who have given birth to two or more children seem to be able to make any successful guess as to the sex of their expected child.

The Birth of a Child

844 177 *Preparations.* Among the Christian women, customs connected with the preparation for a birth have largely been dropped; but superstition is still a very real factor in the life of every Luo woman. Hence, for example, the preparation of bedding and clothes before a birth is usually neglected on purpose, the position being even worse in families of low income. When women give birth in the maternity wards, the husbands therefore have to make a hasty preparation during the seven days spent by their wives in hospital.

843 177 [302] Among the pagans, the pain or nausea experienced during the first few months of foetal growth is mitigated by the administration of a certain medicine. When this trouble has ceased the woman is expected to grow long hair which should not be shaved until the child is born. Those pagan women who associate much with Christians, however, have abolished this custom of growing hair, though some of them still take the medicine. Among the pagans, the expectant mother takes a light purgative during the sixth month which is believed to free her from any abdominal impurity. Strong purgatives are forbidden in case they may cause abortion or premature birth.

844 *Assistance during delivery.* The assistance a woman receives when giving birth depends on the circumstances in which she finds herself. There is no ruling laid down

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

worn is black. Others smear themselves with white earth. Relations in the village shave their heads three days after a death. The eldest son of the deceased sits on a stool in the road outside the village and his head is shaved by an old woman. For three days after the death of anyone of importance the villagers do not cultivate.

If a big chief dies all the surrounding people collect at the village; even if a neighbouring clan is at war hostilities are suspended, and they attend the funeral rites of their late enemy. In the case of the death of a chief a new hut is built and the deceased is buried inside in a sitting posture; the grave is dug by a brother of the deceased. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water pot. Seeds of every kind of grain grown are put into the grave; sweet potatoes are excluded. The people dance and drink *tembo* for ten days and many oxen are slaughtered. The men wail for ten days, but the women wail every morning for about a year. No one cultivates the fields for ten days.

Birth customs.—On the occasion of a birth, if it is a boy it is kept inside the house for four days, if it is a girl for three days. When a birth takes place the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the hut until the child begins to cut its teeth. The mother does not go to cultivate for about nine days after the birth.

If a woman has had two children and they have both died, she will upon the birth of the third child take it out of the village on a basket-work tray and place it in the road; an old woman who has had a hint of this will go and pick it up and take it to her house, then the father of the child goes and buys it back for a goat: having recovered it the father bores the lobe of its right ear and inserts a small earring of brass wire. If the child is a boy it is henceforward called Owiti and if a girl it is called Awiti, meaning the child that has been thrown away. The old woman who picked up the child is afterwards called mother in addition to the real mother.

Twins are considered lucky, but the infants and their parents have to stay in seclusion in their hut for a whole month. Women neighbours may enter the hut but men may not. The twin born first is called Apio (the one who comes quickly). The twin born second is called Adongo (the one who is delayed). The birth of twins is signalised by dances which extend over a whole month; they are apparently of a somewhat obscene character.

Marriage customs.—Girls are espoused at the age of seven, and they often go to their husband's house at the age of ten or eleven. The suitor commences by making small payments to the father of the girl every month or two. When the man has paid say one cow and twenty sheep he takes the girl to his house.

The unmarried girls of the village take the bride to her husband's house. The father of the girl kills an ox and takes the meat and a quantity of *wimbo* porridge to the man's village by way of providing a wedding feast. If the man's

583 with him three or four cows. The party entered the dala very slowly
585 feigning indifference and reluctance. The bridegroom made himself as inconspicuous as possible, and tried to conceal himself in the midst of his companions. No ceremonies took place on the day of arrival, but the guests were given food and spent the night in the simba hut. On the following day the bridegroom was taken to the hut of the bride's mother and made formally known to her. Most was killed and the day was spent feasting and drinking. Finally in the evening the bridegroom and the bride's father sat down together and the
[533] bargaining began. The rest of the gathering were entertained by a professional minstrel who sang topical songs, some composed to meet the occasion. His fee, incidentally was a goat, which, for some reason I could not discover, had to be presented to him by the bride. He was also given presents by the girl's father and mother.

During the bargaining the bride's father tried to get as large a payment as possible out of the bridegroom. If he was too greedy the negotiations were broken off, and the bridegroom paid compensation for the expenses incurred in entertaining his party and for the loss of the bride's virginity. But if the two came to an agreement that agreement was final, and no further demands on the father's part or subtractions on the part of the bridegroom were allowed, unless the former demanded to see the cattle before accepting them. This was sometimes done, and if the cattle were unsatisfactory he might refuse to proceed with the marriage. If, on the other hand, he trusted the bridegroom, the negotiations were considered closed, and he might even consent to receive a proportion of the bride-price after instead of before the final marriage feast had taken place, and the girl left her home for good. In this case the bridegroom had to give an extra bull, known as the *rwadh kirisya*, which was sent over for inspection before the feast took place. If it was accepted the final ceremonies were then carried through.

583 In most cases the bride-price itself was paid by instalments over a period that varied with the ability of the bridegroom's father to meet his liabilities. Usually some months elapsed before the whole number of cattle had been handed over, and it might even be a year or two before the girl's father received all that was due to him. During this period it was customary for the girl to pay her future husband a visit from time to time. She was always accompanied on these visits by one or two girl friends, and was expected to stay for several days. She slept in the simba hut with her betrothed, and intercourse took place. It sometimes, though rarely, happened that the girl conceived
[841] on one of these occasions. This was bad luck for the girl's parents, but fortunate for the bridegroom, for it was absolutely necessary that the child should be born in his dala. He could in consequence hurry on the marriage, which could now take place before the whole of the

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

When A MAN MARRIES
591 a second or third wife, he may select another place for his new wife, either in the village near his former wife, or he may elect to take her to some other village. A man who has wives dwelling in different places lives with them in turn. Married
586 women are careful in regard to their relations with men. Should a woman be lax in her behaviour or encourage men to visit her, her husband will send her back to her parents and divorce her.

842 A wife who is proved to be sterile is not divorced, but her
595 parents send her sister to become the man's wife, and he is expected to pay another sum as a marriage-fee for her; but there is no stated time when the sum shall be paid after the woman goes to live with him. The former wife continues to live with him as his wife.

291 **Distinctive dress of married women.** Each woman after marriage makes a girdle with a long fringe at the back and ties the ends together, which gives it the appearance of a tail. The girdle is worn constantly during the husband's life-time,
[165] but, should he die, she takes it off and puts it on the house-roof over the door during the season of mourning to show that
304 she is a widow and is mourning. After marriage a wife scarifies her sides and back in addition to the scarifications she made at puberty. When a woman has a son born, she makes a
352 clay-mound in the middle of the floor in her house for the
852 food pot to rest on when the family are at meals.

● 844 **Birth customs.** A wife who expects her confinement calls in an elderly woman to act as midwife. This woman is a person who has had experience in such matters and is herself a mother. When the child is born, the midwife cuts the umbilical cord on an axe handle if the child is a boy, and on a hoe handle if it is a girl. The placenta of a boy is buried outside on the right side of the doorway and that of a girl on the left side. During the first three days the father remains near the house
846 in which his wife and child lie, but the midwife alone enters and attends to the wants of the mother and child. On the third day the father takes a fowl and rubs it on the child's chest and turns it loose, when it becomes the property of the child. When the new moon appears, the parents bathe, and

Some Customs of the Luwo (or Nilotic Kavirondo) living in South Kavirondo.

By the Rev. H. Hartmann.

Contents:

Birth. — Betrothal and Marriage. — Burial of a married Man. — Burial of a Woman. — Burial of a Child.

Birth.

The Luwo people live together with their families in kraals. These families consist of the owner of the village with his wives, and his sons with their respective wives and children, and the owner's unmaried daughters.

Each wife has her own hut. The husband spends most of his time in the hut of his favourite wife. He may, however, have besides a hut for each of his wives, a small hut for himself, but he will never sleep in it. For this purpose he goes to the huts of each of his wives in turn, or generally he sleeps in that of his favourite wife, and visits the others, whenever he is informed by the women that one of them has menstruated, then after 2 days he goes to her hut for a couple of nights.

If a woman has conceived and happens to be one who has not brought forth yet, then 3 or 4 months after conception she gets little incisions *(kelo)* made all round the waist. For this operation the patient has to sit down on a stone (nothing else). The operation is performed by an older woman. She uses a crooked thorn which is hooked under the skin, and where the point of the thorn lifts the skin a very tiny cut is made with a native razor. Between every cut there is a space of about $^1/_4$ of an inch. Three rows of incisions are made this way all round the waist just below the navel, the rows being also about $^1/_4$ of an inch apart. No medicine is applied.

When the skin is healed again the woman goes home for 3 days to show herself *(iwo kelo)* and a goat is killed for her by her father. She returns with roasted *wimbi* flour for brewing beer and a sheep. When the beer is ready the sheep and some chickens are killed and they have a feast *(kong kelo kelo)*.

After the feast the young woman gets from an older one some medicine, the ashes of burnt herbs, of which she has to taste a little morning and night for one month *(nadgo misalo)*.

When this month is over she gets another medicine, prepared out of cooked roots of plants *(yudh agula)* which she takes morning and night until one month before giving birth.

In case a woman who is with child has committed adultery she takes a certain medicine, called *manyasi*, otherwise she will have a miscarriage or the child will be a weakling.

When the hour of childbirth has come the woman sits down on the floor of the hut naked. Even the usual string of beads is taken from her waist. A

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

844 couple of women who have come to assist her, support her shoulders. If the woman is afraid or weak, somebody, generally a strong woman is called to *thuñgo* her, i. e. she puts her mouth close on the mouth of the patient, and blows her breath down the patient's lungs in order to increase the pressure.

No sooner the child is born or one of the assisting women run out of the hut to pull out of the roof a piece of kaffircorn stalk, which is split leaving a sharp edge. This is used to cut the babe's navel after it has been tied off.

[201] If the babe is a boy the Kaffircorn stalk is pulled out of the roof at the side of the fire place of the hut (*Kor amach* = lefthand side facing the hut). If it is a girl, the stalk is pulled out *Kor attung* = the right hand side. Compare: Burial of children (p. 274).

When the afterbirth has come out the mother takes the child on her lap, whilst somebody runs for a drop of fresh sheepmilk — otherwise never consumed — which the child has to drink. Not until the child has swallowed a drop of this will the mother give the child suck.

846 Immediately after the birth of the child the husband orders a goat to be killed for the mother, and the pot is put to boil, for the mother has a ravenous appetite. Now word is sent to her father, who will kill a goat for his wife, who comes to see her daughter, bringing some of the meat and fish along.

For no purpose except nature's call is the mother to leave the hut within 4 days, if the babe is a boy. Then she takes the child outside, and a little patch of hair is shaven above the ears of father, mother and child.

852 After 10 days a bull and a heifer are bled, meat and fish is cooked, *simsim* is pounded and mixed with rendered butter, and the lot of it is to provide a good feed for the inhabitants of the kraal later in the day. On that day the heads of father, mother and child are shaven clean. Then after the woman is smeared [824] with butter and sprinkled with *simsim* seeds, seedballs of a wild plant *(ochok)* are strung on plaited grass *(oganga)* and creeping grass *(modhono)* and [301] hung crosswise over the shoulders and under the armpits of the young mother. In the same way she is ornamented with cowryshells, ordinary beads, beads of small circular pieces of ostrich eggs *(rek)* and big iron beads.

[262] When the woman is thus ornamented, a boy, her brother-in-law, is called to hold the child. Now an old woman brings *awinja* (= pounded *simsim* mixed with rendered butter) and cooked *wimbi*. She kneeds a mouthful of the food, making with her thumb a little pit in it *(othwonyo otonge)* which she fills with *awinja*, then she puts it on the end of a wooden ladle, used in stirring the food, 4 times to the mouth of the mother. The 5th time she puts it with the help of the ladle in the mother's mouth, who is not allowed to touch the food with her hand. After she has eaten this one mouthful, another mouthful is given in the same way to her young brother-in-law who holds the child.

Then meat, fish, blood and other food is brought for the inhabitants of the kraal. That night the father and mother of the child sleep again together for the first time after the birth of the child *(iñgado imbo nyathi)*.

If the babe is a girl the woman stays in the hut for 3 days, after which the child is taken outside and a little patch of hair is shaven also above

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

754 in order to kill him. If a person is thought to be bewitched, the medicine
[683] man concerned is caught and forced to remove the spell, afterwards being punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkingo." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a
695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

787 As regards *omens*: If a bird sings on the left-hand side as a man
777 is starting on a journey, the journey, if for war, will be unlucky; but if it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that is likewise a bad sign. They profess to be able to foretell events by
787 *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad prophesied the coming of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 On the occasion of a *birth* the infant, if a boy, is kept inside the house
[844] for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

856 not begin to speak until after two years, when they are
868 barely able to construct short simple sentences.

Discipline

861 Formal training in discipline begins as early as the
855 seventh month, at the time when the child may put some dirty object to its lips. Thus a mother, finding her child with soil in its mouth, may slap it gently as she removes the soil, or the hands of the child may be tapped with anything convenient. A child crawling towards the fire would be immediately pulled away, and sometimes it might be frightened with the glowing end of a burning twig in order to impress the danger upon its mind.

856 It is never certain when a child is first going to walk,
164 for the conditions under which children are brought up are such that it is impossible for them to escape being seriously ill at one time or another. Hence the period is largely determined by the health of the child. The average time ranges from eleven to fourteen months. A child who develops very rapidly through the early stages causes its parents much worry, for it is believed that a fast-growing child never survives.

855 *Effects of the child's emotions.* The mother's attitude to-
[844] wards the emotions of the child is based on the deep impression left on her mind by the strain of the birth. Thus, I have come across women who told me quite convincingly that whenever they heard one of their children cry out vigorously they again felt the pain they had experienced during its birth. A mother tolerates the emotional outbursts of her child not only because she loves it but even more because she struggled to bear it. This seems to be the real cause of the so-called humanity of women towards children in contrast with the indifference sometimes shown by men. Instead of setting the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

deliver. A person standing behind an expectant mother may also be driven away in the fear that if that person's birth had been difficult the birth of the coming child would be equally difficult. Social regulations connected with greetings are found among the pagans and these may result from the instruction of a medicine man. Thus he may prescribe the length of time in which an expectant mother is not allowed to greet those whom she happens to meet on the road. [843] [845] [576]

Although in the family circle a woman is not allowed to overwork during this period, conditions are such that, if left to themselves, they continue with very strenuous work until the time of birth. In the past, expectant mothers stored food which they ate after giving birth. These foodstuffs might be dried meat, dried fish, ghee, and corn for gruel. Nowadays the availability of fresh meat has made it possible to supply women with sufficient food even although it is very expensive. [251]

The amount of rest given to an expectant mother depends on the husband's position in society. With the poorer families, hard work continues till the time of birth. Thus, at one time a woman called Andege took some ripe bananas to Kisumu in the morning, returned at about 2 p.m., and at 4 p.m. gave birth to her daughter, Rapuoda. [844]

Guessing the child's sex. In guessing at the child's sex before birth, the mothers generally rely on past experience. It is recognized to be very difficult, and even impossible, to predict the sex of the first child. Certain guesses depend on the health of the mother, though such guesses are not made public. For a male child it is believed that the mother should be thin; with a female child, the reverse, and these views are probably based on the assumption that male children sap their mother's energy to a greater degree. This is likewise the basis of [846]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

843 [846] the custom which confines a female child in the hut with its mother for only three days, whereas a male child would stay with its mother for four days, thus giving her a longer rest. In reality, only those women who have given birth to two or more children seem to be able to make any successful guess as to the sex of their expected child.

The Birth of a Child

844 177 *Preparations.* Among the Christian women, customs connected with the preparation for a birth have largely been dropped; but superstition is still a very real factor in the life of every Luo woman. Hence, for example, the preparation of bedding and clothes before a birth is usually neglected on purpose, the position being even worse in families of low income. When women give birth in the maternity wards, the husbands therefore have to make a hasty preparation during the seven days spent by their wives in hospital.

843 177 [302] Among the pagans, the pain or nausea experienced during the first few months of foetal growth is mitigated by the administration of a certain medicine. When this trouble has ceased the woman is expected to grow long hair which should not be shaved until the child is born. Those pagan women who associate much with Christians, however, have abolished this custom of growing hair, though some of them still take the medicine. Among the pagans, the expectant mother takes a light purgative during the sixth month which is believed to free her from any abdominal impurity. Strong purgatives are forbidden in case they may cause abortion or premature birth.

844 *Assistance during delivery.* The assistance a woman receives when giving birth depends on the circumstances in which she finds herself. There is no ruling laid down

20:Ominde 1-5 (ca. 1948) 1952
FL11 Luo FL11

as to which particular people should help her; this obligation merely rests on whomsoever happens to be present. The assistance of a midwife is required more for a first child than for those following. Anyone in the family may help the woman in an emergency; but the presence of the husband is not considered necessary unless the case is a difficult one. In a difficult labour several strong men may be required to hold the woman, but many women give birth to their babies without any assistance. The usual positions adopted are: lying on the back with knees bent, or sitting with the back supported by a tree. Some leaves serve for the mat. Older women often have their child without assistance, but it is an obligation upon everyone who finds a woman in need of help to assist her, even if she is unknown to them.

On some occasions a woman about to give birth is made to run, eventually being seated to deliver her baby. A light pressure is exerted on the shoulders. The instructions are given by midwives, who sometimes slap the woman across her face if she does not obey their orders.

After a child is born, cold water is poured over it to make it cry. If it does not cry, iron hoes are brought and a series of loud tinkling noises made as a form of persuasion. Among the pagans, tobacco smoke is sometimes puffed into the child's nose. When it has been made to utter its first cry, its head is shaped to the normal form, and while the nurse waits for the placenta, she cleans the baby's forehead with a soft leaf. Before the cord is cut it is tied with strips of dried banana leaves at three equal intervals for a girl and at four equal intervals for a boy, to indicate the length of the period of rest. The midwives used to chant a prayer, but this is now no longer heard. It is possible that this chant was a thanksgiving and a request for the newborn baby to fare well in life.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

844 in life. The women themselves seem to share a belief that neither their own efforts nor the assistance of others have much effect upon the actual delivery of children. They prefer to believe that it is some mysterious power of God which helps them to give birth to their children.

845 *Difficult labour.* Although difficult labour cases are now largely dealt with in the hospitals, the crude traditional methods are occasionally used in remote areas, and they indicate the extent to which people will go to save the lives of mothers. To the midwives a difficult labour was formerly a dreaded situation. The mothers could suffer for days, and many of them died before relief was given. If a woman died before the birth it was considered a very bad omen. A stranger had to be paid to cut her open and remove the dead child, but no relative of her own was allowed to touch her.

When there was any hope of saving the mother's life, a large number of people gathered about her, and many deaths may have occurred through over-manipulation. Sometimes as many as ten persons were engaged in operating, while others stood by giving confused advice. The group performing the operation included men as well as women. The men held the woman while the women pulled on the head of the child, which was hooked on an iron hoe.

When this was done, little attention was paid to the damage of the passage from the womb. If the woman suffered twice from such a difficult delivery, she and her husband were advised to cease having children. If the advice was not observed the midwives had a right to refuse their help.

[177] *Twins.* The birth of twins was an unwelcome experience in pre-Christianized society, but in these days it is rarely accompanied by its traditional ceremonies of lamentation. According to tradition, as soon as the loud

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *son koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted. 789

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witchdoctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' *(jamkingo)* which, among the Gemi tribe is practised by the blacksmiths.(4) 753 756 [754]

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth. 846

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances. 845 ●

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting [857] 881 304

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

765 worn is black. Others smear themselves with white earth. Relations in the village shave their heads three days after a death. The eldest son of the deceased sits on a stool in the road outside the village and his head is shaved by an old woman. For three days after the death of anyone of importance the villagers do not cultivate.

766 [726] If a big chief dies all the surrounding people collect at the village; even if a neighbouring clan is at war hostilities are suspended, and they attend the funeral rites of their late enemy. In the case of the death of a chief a new hut is built and the deceased is buried inside in a sitting posture; the grave is dug by a brother of the deceased. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water pot. Seeds of every kind of grain grown are put into the grave; sweet potatoes are excluded. The people dance and drink *tembo* for ten days and many oxen are slaughtered. The men wail for ten days, but the women wail every morning for about a year. No one cultivates the fields for ten days.

844 846 *Birth customs.*—On the occasion of a birth, if it is a boy it is kept inside the house for four days, if it is a girl for three days. When a birth takes place the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the hut until the child begins to cut its teeth. The mother does not go to cultivate for about nine days after the birth.

844 608 [304] [553] If a woman has had two children and they have both died, she will upon the birth of the third child take it out of the village on a basket-work tray and place it in the road; an old woman who has had a hint of this will go and pick it up and take it to her house, then the father of the child goes and buys it back for a goat: having recovered it the father bores the lobe of its right ear and inserts a small earring of brass wire. If the child is a boy it is henceforward called Owiti and if a girl it is called Awiti, meaning the child that has been thrown away. The old woman who picked up the child is afterwards called mother in addition to the real mother.

845 [553] [535] Twins are considered lucky, but the infants and their parents have to stay in seclusion in their hut for a whole month. Women neighbours may enter the hut but men may not. The twin born first is called Apio (the one who comes quickly). The twin born second is called Adongo (the one who is delayed). The birth of twins is signalised by dances which extend over a whole month; they are apparently of a somewhat obscene character.

582 583 *Marriage customs.*—Girls are espoused at the age of seven, and they often go to their husband's house at the age of ten or eleven. The suitor commences by making small payments to the father of the girl every month or two. When the man has paid say one cow and twenty sheep he takes the girl to his house.

585 The unmarried girls of the village take the bride to her husband's house. The father of the girl kills an ox and takes the meat and a quantity of *mtama* porridge to the man's village by way of providing a wedding feast. If the man's

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

shave their heads, taking care to keep separate the hair which is cut off. This hair is hidden away in some place near, by preference in a rat-hole or in some hole where it is not likely to be found again. 846

Birth of twins. At the birth of twins the parents remain together in one house for ten days, and the midwife waits on them. When this time of seclusion ends, a small pot of blood is drawn from the neck of an ox, cooked and given to the parents to eat. After the meal they are escorted to the river, washed, and their heads shaved. Their house is then swept and the floor smeared with cow-dung, and friends come and dance in the village and drink beer. The mother takes the twins a round of visits which lasts several days, but she returns home each night to sleep. At each house she visits the people give her presents of grain. When the visits have been made the mother brews beer with the grain she has received in presents, and her friends again gather to dance and to drink the beer. 845 [431]

Initiation ceremonies. Children live in the same village with their parents and under their control. Until marriage they lead a free and happy life, with few wants and cares. The boys assist in herding cattle, and the girls help their mothers in their fields and also carry wood and water and assist in cooking. Their duties are light and there is no force beyond argument used to make them work. Children imitate their elders in seeking ornaments to wear and in smearing their bodies with oil and red or white paint. When they come to the age of puberty, their four front teeth in the lower jaw are extracted and they are initiated in the customs of the clan. For four days they remain in the house, after which they go about visiting their friends and receive presents of fowls. Girls go through the same ceremony as boys in having their teeth extracted, but, in addition, their bodies are scarified on the sides and back. Should there be excessive haemorrhage when teeth are extracted, the parents send to the man who has the bracelets of the deceased person after whom the boy is named and borrow them, and the youth wears them until the bleeding ceases. When the ceremony of extracting the teeth is over, the boys are sent to live in the boys' quarters 857 [302] 881 304 [431] [752] 882

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

the ear of father, mother and child. But 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(bwanyo wich)*. The feast is prepared much like for a babe-boy, but there is no *awinja*, and the performance with the ladle does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere. 852

If the husband has more wives, he is not entitled to conjugal rights with any of them until after the birth of a child the feast has taken place, and he has slept again with the mother of the child. If he would brake this rule, the newborn babe would waste away and die *(omiyo nyathi chira)*. 846 834

Adultery is reckoned a serious offence by both husband and wife. If the woman knows that her husband is misbehaving in this way, she will refuse cohabitation, for if she is with a child cohabitations would result in a miscarriage. If a woman commits adultery her husband may send her away, and claim the dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her. 837 834 684 848

A widow is given in marriage to the full brother or the nearest relation of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she begets children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence, when the girls born to them grow up and get married, the real brother of deceased husband will receive the full dowry paid for them minus one cow for each girl, which cow goes to the real father of the girl for bringing her up. 587

When the boys born by them grow up and get married they will leave the kraal and build their own apart, unless their real father helps them to get married by paying the dowry. [591]

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days; not even for nature's call. A hole is dug in the floor of the hut, and an old bottomless cooking pot is put over it, and this is used as a W. C. During those 20 days new beer is brewn. When the time has elapsed and the beer is ready, a bull is killed and its hide is dried for the parents of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or migosi)* mixed with water in a small vessel. She dips her finger in it and 945 852 [514] [273]

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

845 852 smears a little clay in front of both ears of all the people who come to the feast, and each of them do the same to the mother in return. All of them decorate their necks and waist with *bwombwe*, a creeping plant; then they start a most immodest dance; [831 786 535 scarcely covered with their goatskins they simulate the copula, and the vilest songs, which no decent person could ever listen to. After the dance they enter the kraal where food is ready. Then they have the beer. The relations of the woman stay over for the night, but all the others go home.

852 831 535 786 *Miend Kumu* is a similar dance, which is indulged in, when a woman has given birth to a child, of whose conception she did not get aware of for some considerable time. The people who come to this dance are far fewer; it does not last as long either. In stead of a bull only a goat is killed by the relations of the woman, and some beer is brewn for the feast. Other ceremonies are the same as after childbirth under usual circumstances.

Betrothal and Marriage.

584 Before any other arrangements are made, a boy intending to get married tells his parents that he wants to look out for a partner through life. If the father has any cattle towards the dowry he will agree, and tells his son to make his choice, and inform her relations. When he has found a likely girl he invites a couple of friends, one of whom at least knows the relations of the girl well [882 *(jatielo)*. With his friends he pays a visit to the kraal of the girl, and enters the *simba* i. e. the hut in which the boys of the kraal live.

No sooner have they entered the *simba* or the girls of the place go to greet the visitors, after which they bring them pipes and tobacco and go to fetch or prepare some gruel for them to drink. In the meantime the *jatielo* goes to the hut of the particular girl's father to tell him that a friend of his has come for his daughter. The father will inquire from the *jatielo* what kind of lad the boy is, whether he is of good family, whether he is not the son of a witchdoctor, whether he can pay a decent dowry, ect.

If the father agrees the *jatielo* goes back to his friends in the *simba* and reports that the father is willing, whereupon the boy proposes to the girl. There and then the girl decides whether she agrees or not. If she does not want the boy, then all is finished and visitors go home at once. If she agrees, they stay for the night. They sleep in the *simba* seperately together with the other boys and girls.

583 Then, in former years, in the early morning the visitors would catch the girl after she had left the *simba*, and take her to her fiance's village *(mako)*. On account of a government regulation, by which the dowry is now more or less fixed, this practice is no longer adhered to.

583 585 The boy and his friends go home. He informs his parents, who next day send the *jatielo* back with somebody else to pay the first instalment of the dowry, usually 2 or 3 head of cattle. They stay over the night, and in the morning they catch *(mako)* the girl, for she pretends not to like going along. After they have had some gruel to drink, the boys who brought the cattle more or less drag her out of the kraal. The girls from her village strip her absolutely naked, and the boys from there follow those who fetch the girl to take from them some of their orna-

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

hut until the child begins to cut its teeth. The mother does not go out to cultivate for nine days after the birth. If a woman has had two children previously who have died, she follows the same ceremony as that described among the Bantu Kavirondo. When the child has been brought back by an old woman, it is redeemed by the father, who then bores the lobe of the right ear and inserts an ear-ring of brass wire. The child is thenceforth called "Owiti," if a boy; if a girl, "Awiti," meaning "the child that has been thrown away." The old woman who picks up the child is regarded as its foster-mother. Twins are considered lucky, though their arrival is attended by a good many ceremonies and by propitiatory dances which are of an obscene nature.

437. A MEDICINE MAN FROM NYAKACH, SOUTH SIDE OF KAVIRONDO BAY

When a person *dies*, the corpse is immediately taken out of the house. If it be a woman, her brothers-in-law dig the grave in the verandah of the house. The corpse is *buried* on its left side with the hand under the head. In the case of a woman's death, her relatives and friends come and wail. Her husband presents each clan that attends with a goat. The mourners stay for three days. The hut in which a person has died is used for a month. The neighbours then meet together and drink beer, and the house is broken down. Upon the death of a man his brother digs his grave, and he is buried in the house of his first wife, if she is still living. If she is dead, he is buried in the verandah of his own house. Men only wail for one day. After that only the women wail, at first for three days, and then at dawn for fifteen days.

As a sign of *mourning* the women wear a string of banana fibre round the forehead. They also wear a black tail fringed with white strings for about a month. Others smear themselves with white earth. Relatives of

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

economy by handicrafts and exchanging pots and baskets for corn.

The introduction of modern household goods of a more durable nature has lessened women's chances of earning money through weaving baskets or making pots. The overcrowding of land has also meant an increased economic dependence on men. To satisfy family demands, most women engage in some kind of business transaction which often keeps them out of the home from morning till late in the evening. Although motor transport has improved these conditions, children have been unfavourably affected through neglect during the mother's prolonged absence. This change from sedentary occupation to long-distance travel has taken place since the coming of new economic standards, and at the moment it is very rare to find a woman who does not trade in a small way.

Women and the Birth of Children

Customs and taboos. The customs and taboos observed by expectant mothers merely reflect the social attitude of Luo women to the birth of their children. Thus the aims of the customs and taboos can only be appreciated in the light of a social desire for the woman to give birth without difficulty. Fundamentally this is also a basis for the disapproval of the birth of twins, and also of abnormal deliveries.

Concerning the persistence of the marital relationship during pregnancy there is no generally accepted restriction. But while custom varies from person to person, any sexual relationship continuing after the sixth month of pregnancy is regarded as excessive. The only social stigma attached to sexual relationship continued for the greater part of this period, is that it may provoke an open rebuke from the midwives or other women. Thus while no hard

[Text continues on p. 57]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

and fast rule can be placed on the time of the temporary termination of the marital relationship, it is generally left to the good sense of the men and women concerned.

The regulation of the diet. Here again the restrictions aim mainly at minimizing the chances of the child being too big, thus rendering it easier for the mother to give birth. Among the foods which women normally eat, bananas are eliminated during pregnancy because of their supposed fattening effect upon the child, and the danger of thus causing a difficult delivery. Among the most conservative women, pumpkins are placed in the same category with the additional belief that, since their contents are mostly water, they have a weakening effect upon the child.

Sugary foodstuffs such as canes, sweets, sugary tea or coffee are among the things which expectant mothers do not eat. Women believe that these foods produce babies so fat that they put a strain on the mother's strength. For the same reason, the excessive drinking of gruel is prohibited, and hot gruel is especially avoided on the grounds that it would scald the baby. But while these restrictions are adhered to in principle, in actual practice women with a strong liking for forbidden foodstuffs do not refrain from eating them.

A factor of great psychological significance is the belief that Luo mothers begin to yield to the will of their babies long before they are born. Among them are some who, during pregnancy, develop a habit of eating dried mud and other peculiar foodstuffs, one baby causing a mother to eat these and the next turning her appetite against them. These strange habits of eating are attributed to the will of the expected child; and it is believed that the domination of the child over the mother, enduring through the early part of its life, begins in the period of pregnancy.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

deliver. A person standing behind an expectant mother may also be driven away in the fear that if that person's birth had been difficult the birth of the coming child would be equally difficult. Social regulations connected with greetings are found among the pagans and these may result from the instruction of a medicine man. Thus he may prescribe the length of time in which an expectant mother is not allowed to greet those whom she happens to meet on the road.

Although in the family circle a woman is not allowed to overwork during this period, conditions are such that, if left to themselves, they continue with very strenuous work until the time of birth. In the past, expectant mothers stored food which they ate after giving birth. These foodstuffs might be dried meat, dried fish, ghee, and corn for gruel. Nowadays the availability of fresh meat has made it possible to supply women with sufficient food even although it is very expensive.

The amount of rest given to an expectant mother depends on the husband's position in society. With the poorer families, hard work continues till the time of birth. Thus, at one time a woman called Andege took some ripe bananas to Kisumu in the morning, returned at about 2 p.m., and at 4 p.m. gave birth to her daughter, Rapuoda.

Guessing the child's sex. In guessing at the child's sex before birth, the mothers generally rely on past experience. It is recognized to be very difficult, and even impossible, to predict the sex of the first child. Certain guesses depend on the health of the mother, though such guesses are not made public. For a male child it is believed that the mother should be thin; with a female child, the reverse, and these views are probably based on the assumption that male children sap their mother's energy to a greater degree. This is likewise the basis of

20:Ominde 1-5 (ca. 1948) 1952
FL11 Luo FL11

as to which particular people should help her; this obligation merely rests on whomsoever happens to be present. The assistance of a midwife is required more for a first child than for those following. Anyone in the family may help the woman in an emergency; but the presence of the husband is not considered necessary unless the case is a difficult one. In a difficult labour several strong men may be required to hold the woman, but many women give birth to their babies without any assistance. The usual positions adopted are: lying on the back with knees bent, or sitting with the back supported by a tree. Some leaves serve for the mat. Older women often have their child without assistance, but it is an obligation upon everyone who finds a woman in need of help to assist her, even if she is unknown to them.

On some occasions a woman about to give birth is made to run, eventually being seated to deliver her baby. A light pressure is exerted on the shoulders. The instructions are given by midwives, who sometimes slap the woman across her face if she does not obey their orders.

After a child is born, cold water is poured over it to make it cry. If it does not cry, iron hoes are brought and a series of loud tinkling noises made as a form of persuasion. Among the pagans, tobacco smoke is sometimes puffed into the child's nose. When it has been made to utter its first cry, its head is shaped to the normal form, and while the nurse waits for the placenta, she cleans the baby's forehead with a soft leaf. Before the cord is cut it is tied with strips of dried banana leaves at three equal intervals for a girl and at four equal intervals for a boy, to indicate the length of the period of rest. The midwives used to chant a prayer, but this is now no longer heard. It is possible that this chant was a thanksgiving and a request for the newborn baby to fare well in life.

FL11 Luo FL11

844 in life. The women themselves seem to share a belief that neither their own efforts nor the assistance of others have much effect upon the actual delivery of children. They prefer to believe that it is some mysterious power of God which helps them to give birth to their children.

845 *Difficult labour.* Although difficult labour cases are now largely dealt with in the hospitals, the crude traditional methods are occasionally used in remote areas, and they indicate the extent to which people will go to save the lives of mothers. To the midwives a difficult labour was formerly a dreaded situation. The mothers could suffer for days, and many of them died before relief was given. If a woman died before the birth it was considered a very bad omen. A stranger had to be paid to cut her open and remove the dead child, but no relative of her own was allowed to touch her.

When there was any hope of saving the mother's life, a large number of people gathered about her, and many deaths may have occurred through over-manipulation. Sometimes as many as ten persons were engaged in operating, while others stood by giving confused advice. The group performing the operation included men as well as women. The men held the woman while the women pulled on the head of the child, which was hooked on an iron hoe.

When this was done, little attention was paid to the damage of the passage from the womb. If the woman suffered twice from such a difficult delivery, she and her husband were advised to cease having children. If the advice was not observed the midwives had a right to refuse their help.

[177] *Twins.* The birth of twins was an unwelcome experience in pre-Christianized society, but in these days it is rarely accompanied by its traditional ceremonies of lamentation. According to tradition, as soon as the loud

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

cry of the midwives was heard announcing the birth of twins, the news had to be carried to the parents of the woman. This loud cry was intended to scare the evil spirits which had brought about the double birth. With it began a series of taboos on the couple as well as on the twins, the family being virtually isolated from society. For emptying their bowels a large pot was placed in a hidden corner at the back of the house. If either of the twins died during the early period it was thrown into this pot. In place of the usual clothing, the couple had creepers twined around them. The period of taboo closed with a large gathering at which a great deal of beer was drunk. At this final ceremony the dancing was rather obscene and was accompanied by foul language in reference to the couple. These proceedings lifted the taboo from the shoulders of the parents, but the twins continued to be affected until their deaths. Moreover, anything done to one of the twins had to be done to the other also, because they could not be treated as separate identities. Now the attitude has greatly changed and even among pagans these customs are no longer observed. [177]

Similarly, a birth in which the baby's legs appeared first was dreaded. This was ascribed to the work of the evil spirit.

Renewal of marital relationship. Originally it was the custom for the renewal of a marital relationship to take place on the third day following the birth of a female child, and on the fourth day after a male child. No married relatives were allowed to enter the hut to see the baby before the parents of the child renewed their marital relationship.

Although none of my informants could testify that this practice still exists, it is possible that it persists in certain places. Some of the informants pointed out that [177]

1: Butt E-4 (no date) 1952 FL11 Luo FL11

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *won koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted. 789

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witch-doctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' (*jamkingo*) which, among the Gesi tribe is practised by the blacksmiths.(4) 753 756 [754]

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth. 846

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances. 845

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting [857] 881 304

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

766 worn is black. Others smear themselves with white earth. Relations in the village shave their heads three days after a death. The eldest son of the deceased sits on a stool in the road outside the village and his head is shaved by an old woman. For three days after the death of anyone of importance the villagers do not cultivate.

766 [724] If a big chief dies all the surrounding people collect at the village; even if a neighbouring clan is at war hostilities are suspended, and they attend the funeral rites of their late enemy. In the case of the death of a chief a new hut is built and the deceased is buried inside in a sitting posture; the grave is dug by a brother of the deceased. A new ox hide is placed at the bottom of the grave, and the head of the corpse is covered with a water pot. Seeds of every kind of grain grown are put into the grave; sweet potatoes are excluded. The people dance and drink *tembo* for ten days and many oxen are slaughtered. The men wail for ten days, but the women wail every morning for about a year. No one cultivates the fields for ten days.

844 846 *Birth customs.*—On the occasion of a birth, if it is a boy it is kept inside the house for four days, if it is a girl for three days. When a birth takes place the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the hut until the child begins to cut its teeth. The mother does not go to cultivate for about nine days after the birth.

844 608 [304] [553] If a woman has had two children and they have both died, she will upon the birth of the third child take it out of the village on a basket-work tray and place it in the road; an old woman who has had a hint of this will go and pick it up and take it to her house, then the father of the child goes and buys it back for a goat: having recovered it the father bores the lobe of its right ear and inserts a small earring of brass wire. If the child is a boy it is henceforward called Owiti and if a girl it is called Awiti, meaning the child that has been thrown away. The old woman who picked up the child is afterwards called mother in addition to the real mother.

845 [553] [535] Twins are considered lucky, but the infants and their parents have to stay in seclusion in their hut for a whole month. Women neighbours may enter the hut but men may not. The twin born first is called Apio (the one who comes quickly). The twin born second is called Adongo (the one who is delayed). The birth of twins is signalised by dances which extend over a whole month; they are apparently of a somewhat obscene character.

582 583 *Marriage customs.*—Girls are espoused at the [illegible]ven, and they often go to their husband's house at the age of ten or eleven. The suitor commences by making small payments to the father of the girl every month or two. When the man has paid say one cow and twenty sheep he takes the girl to his house.

585 The unmarried girls of the village take the bride to her husband's house. The father of the girl kills an ox and takes the meat and a quantity of *wimo* porridge to the man's village by way of providing a wedding feast. If the man's

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

When A MAN MARRIES

591 a second or third wife, he may select another place for his new wife, either in the village near his former wife, or he may elect to take her to some other village. A man who has wives dwelling in different places lives with them in turn. Married
586 women are careful in regard to their relations with men. Should a woman be lax in her behaviour or encourage men to visit her, her husband will send her back to her parents and divorce her.

842 595 A wife who is proved to be sterile is not divorced, but her parents send her sister to become the man's wife, and he is expected to pay another sum as a marriage-fee for her; but there is no stated time when the sum shall be paid after the woman goes to live with him. The former wife continues to live with him as his wife.

291 **Distinctive dress of married women.** Each woman after marriage makes a girdle with a long fringe at the back and ties the ends together, which gives it the appearance of a tail. The girdle is worn constantly during the husband's life-time,
[765] but, should he die, she takes it off and puts it on the house-roof over the door during the season of mourning to show that she is a widow and is mourning. After marriage a wife scarifies
304 her sides and back in addition to the scarifications she made at puberty. When a woman has a son born, she makes a
352 clay-mound in the middle of the floor in her house for the
852 food pot to rest on when the family are at meals.

844 **Birth customs.** A wife who expects her confinement calls in an elderly woman to act as midwife. This woman is a person who has had experience in such matters and is herself a mother. When the child is born, the midwife cuts the umbilical cord on an axe handle if the child is a boy, and on a hoe handle if it is a girl. The placenta of a boy is buried outside on the right side of the doorway and that of a girl on the left side.
● 846 During the first three days the father remains near the house in which his wife and child lie, but the midwife alone enters and attends to the wants of the mother and child. On the third day the father takes a fowl and rubs it on the child's chest and turns it loose, when it becomes the property of the child. When the new moon appears, the parents bathe, and

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

shave their heads, taking care to keep separate the hair which is cut off. This hair is hidden away in some place near, by preference in a rat-hole or in some hole where it is not likely to be found again. 846

Birth of twins. At the birth of twins the parents remain together in one house for ten days, and the midwife waits on them. When this time of seclusion ends, a small pot of blood is drawn from the neck of an ox, cooked and given to the parents to eat. After the meal they are escorted to the river, washed, and their heads shaved. Their house is then swept and the floor smeared with cow-dung, and friends come and dance in the village and drink beer. The mother takes the twins a round of visits which lasts several days, but she returns home each night to sleep. At each house she visits the people give her presents of grain. When the visits have been made the mother brews beer with the grain she has received in presents, and her friends again gather to dance and to drink the beer. 845 [431]

Initiation ceremonies. Children live in the same village with their parents and under their control. Until marriage they lead a free and happy life, with few wants and cares. The boys assist in herding cattle, and the girls help their mothers in their fields and also carry wood and water and assist in cooking. Their duties are light and there is no force beyond argument used to make them work. Children imitate their elders in seeking ornaments to wear and in smearing their bodies with oil and red or white paint. When they come to the age of puberty, their four front teeth in the lower jaw are extracted and they are initiated in the customs of the clan. For four days they remain in the house, after which they go about visiting their friends and receive presents of fowls. Girls go through the same ceremony as boys in having their teeth extracted, but, in addition, their bodies are scarified on the sides and back. Should there be excessive haemorrhage when teeth are extracted, the parents send to the man who has the bracelets of the deceased person after whom the boy is named and borrow them, and the youth wears them until the bleeding ceases. When the ceremony of extracting the teeth is over, the boys are sent to live in the boys' quarters 857 [302] 881 304 [431] [752] 882

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

844 couple of women who have come to assist her, support her shoulders. If the woman is afraid or weak, somebody generally a strong woman is called to *thulge* her, i. e. she puts her mouth close on the mouth of the patient, and blows her breath down the patient's lungs in order to increase the pressure.

No sooner the child is born or one of the assisting women run out of the hut to pull out of the roof a piece of kaffircorn stalk, which is split leaving a sharp edge. This is used to cut the babe's navel after it has been tied off.

[301] If the babe is a boy the Kaffircorn stalk is pulled out of the roof at the side of the fire place of the hut *(Kor emach* — lefthand side facing the hut). If it is a girl, the stalk is pulled out *Kor athong* — the right hand side. Compare: Burial of children (p. 274).

When the afterbirth has come out the mother takes the child on her lap, whilst somebody runs for a drop of fresh sheepmilk — otherwise never consumed — which the child has to drink. Not until the child has swallowed a drop of this will the mother give the child suck.

● 846 Immediately after the birth of the child the husband orders a goat to be killed for the mother, and the pot is put to boil, for the mother has a ravenous appetite. Now word is sent to her father, who will kill a goat for his wife, who comes to see her daughter, bringing some of the meat and fish along.

For no purpose except nature's call is the mother to leave the hut within 4 days, if the babe is a boy. Then she takes the child outside, and a little patch of hair is shaven above the ears of father, mother and child.

852 After 10 days a bull and a heifer are bled, meat and fish is cooked, simsim is pounded and mixed with rendered butter, and the lot of it is to provide a good feed for the inhabitants of the kraal later in the day. On that day the heads of father, mother and child are shaven clean. Then after the woman is smeared [824] with butter and sprinkled with simsim seeds, anklets of a wild plant *(ochok)* are strung on plaited grass *(ogunga)* and creeping grass *(mudhuro)* and [301] hung crosswise over the shoulders and under the armpits of the young mother. In the same way she is ornamented with cowrysshells, ordinary beads, beads of semilircular pieces of ostrich eggs *(rok)* and big iron beads.

When the woman is thus ornamented, a boy, her brother-in-law, is called [545] to hold the child. Now an old woman brings *ewinjo (ma mumbul, simsim, mixed* with rendered butter) and cooked *wimbi*. She kneads a mouthful of the food, making with her thumb a little pit in it *(athuonyo shungu)* which she fills with *ewinjo*, then she puts it on the end of a wooden ladle, used in stirring the food, 4 times to the mouth of the mother. The 5th time she puts it with the help of the ladle in the mother's mouth, who is not allowed to touch the food with her hand. After she has eaten this one mouthful, another mouthful is given in the same way to her young brother-in-law who holds the child.

Then meat, fish, blood and other food is brought for the inhabitants of the kraal. That night the father and mother of the child sleep again together for the first time after the birth of the child *(chgolo undo nyathi)*.

If the babe is a girl the woman stays in the hut for 3 days, after which the child is taken outside and a little patch of hair is shaven also above

11: Hartmann M-5 (ca. 1920) 1928 FL11 Luo FL11

the ear of father, mother and child. But 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(bwanyo wich)*. The feast is prepared much like for a babe-boy, but there is no *awinja*, and the performance with the ladle does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere.

If the husband has more wives, he is not entitled to conjugal rights with any of them until after the birth of a child the feast has taken place, and he has slept again with the mother of the child. If he would brake this rule, the newborn babe would waste away and die *(omiyo nyathi chira)*.

Adultery is reckoned a serious offence by both husband and wife. If the woman knows that her husband is misbehaving in this way, she will refuse cohabitation, for if she is with a child cohabitations would result in a miscarriage. If a woman commits adultery her husband may send her away, and claim the dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her.

A widow is given in marriage to the full brother or the nearest relation of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she begets children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence, when the girls born to them grow up and get married, the real brother of deceased husband will receive the full dowry paid for them minus one cow for each girl, which cow goes to the real father of the girl for bringing her up.

When the boys born by them grow up and get married they will leave the kraal and build their own apart, unless their real father helps them to get married by paying the dowry.

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days; not even for nature's call. A hole is dug in the floor of the hut, and an old bottomless cooking pot is put over it, and this is used as a W. C. During those 20 days new beer is brewn. When the time has elapsed and the beer is ready, a bull is killed and its hide is dried for the parents of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or migosi)* mixed with water in a small vessel. She dips her finger in it and

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

754 in order to kill him. If a person is thought to be bewitched, the medicine
[683] man concerned is caught and forced to remove the spell, afterwards being punished by a fine. This kind of witchcraft, however, is not thought to be very serious. There is a deeper magic called "jamkingo." Amongst the Gemi tribe this is practised by the blacksmiths. It is of the nature of a secret society, and no doubt means secret poisoning. They have a
695 form of *ordeal* called "kiviri." A small pot of water is placed on the fire. A little "wimbi" flour and a bit of "medicine" are put into the water. If the water boils over, the man is guilty; if not, he is innocent. Another ordeal is as follows: A gourd basin with a large hole cut in the bottom is placed on a flat stone. Water is then poured into the calabash, the bottom of which being, of course, not close-fitting to the stone, would permit ordinarily of a leakage. But the medicine man who attends puts into the bottom of the calabash crushed-up leaves of a kind of mimosa which, for a time at least, stop the leakage and enable the calabash to be filled up with water, the retention of the water by the calabash proving the man to be innocent. Another ordeal is arranged in this way: Dry flour is given to the suspected person. If innocent, he can swallow it; if he is unable to moisten the flour with his saliva and swallow it, he is shown to be guilty.

787 As regards *omens*: If a bird sings on the left-hand side as a man
777 is starting on a journey, the journey, if for war, will be unlucky; but if it be merely a peaceful visit, it will be a fortunate one. If the bird sings on the right-hand side, it is a good omen for war, but a bad one for an ordinary visit. If a cat crosses the road from right to left, it is a good omen; if from left to right, bad. If a rat is seen on the road, and it runs along the road ahead of the man, it is a good omen; but if it crosses the road from one side to the other, it is an unlucky sign. If on a journey a man strikes the little toe of either foot, it is a very bad sign; if he strikes the big toe, it is propitious. If the eldest child of a man is a boy, and the man sets out to travel, it will be an unlucky sign if the first person he meets is also a man. On the other hand, if his eldest child is a girl, and he meets a woman when he starts on a journey, that is likewise a bad sign. They profess to be able to foretell events by
787 *divining*, and the divination is exercised on the entrails of an ox or sheep. They are a good deal given to prophesying. The chief Odua when quite a lad prophesied the coming of the white man, and this at a time when no white man had entered the country. They believe in rain-makers.

846 On the occasion of a *birth* the infant, if a boy, is kept inside the house
[844] for four days; if a girl, for three days. When a birth takes place, the female neighbours attend, and a goat is killed for the mother and the other women. No man is allowed in the hut until three or four days have elapsed. The father of the child does not eat or sleep again in the

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

hut until the child begins to cut its teeth. The mother does not go out to cultivate for nine days after the birth. If a woman has had two children previously who have died, she follows the same ceremony as that described among the Bantu Kavirondo. When the child has been brought back by an old woman, it is redeemed by the father, who then bores the lobe of the right ear and inserts an ear-ring of brass wire. The child is thenceforth called "Owiti," if a boy; if a girl, "Awiti," meaning "the child that has been thrown away." The old woman who picks up the child is regarded as its foster-mother. Twins are considered lucky, though their arrival is attended by a good many ceremonies and by propitiatory dances which are of an obscene nature.

437. A MEDICINE MAN FROM NYAKACH, SOUTH SIDE OF KAVIRONDO BAY

When a person *dies*, the corpse is immediately taken out of the house. If it be a woman, her brothers-in-law dig the grave in the verandah of the house. The corpse is *buried* on its left side with the hand under the head. In the case of a woman's death, her relatives and friends come and wail. Her husband presents each clan that attends with a goat. The mourners stay for three days. The hut in which a person has died is used for a month. The neighbours then meet together and drink beer, and the house is broken down. Upon the death of a man his brother digs his grave, and he is buried in the house of his first wife, if she is still living. If she is dead, he is buried in the verandah of his own house. Men only wail for one day. After that only the women wail, at first for three days, and then at dawn for fifteen days.

As a sign of *mourning* the women wear a string of banana fibre round the forehead. They also wear a black tail fringed with white strings for about a month. Others smear themselves with white earth. Relatives of

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

deliver. A person standing behind an expectant mother may also be driven away in the fear that if that person's birth had been difficult the birth of the coming child would be equally difficult. Social regulations connected with greetings are found among the pagans and these may result from the instruction of a medicine man. Thus he may prescribe the length of time in which an expectant mother is not allowed to greet those whom she happens to meet on the road.

Although in the family circle a woman is not allowed to overwork during this period, conditions are such that, if left to themselves, they continue with very strenuous work until the time of birth. In the past, expectant mothers stored food which they ate after giving birth. These foodstuffs might be dried meat, dried fish, ghee, and corn for gruel. Nowadays the availability of fresh meat has made it possible to supply women with sufficient food even although it is very expensive.

The amount of rest given to an expectant mother depends on the husband's position in society. With the poorer families, hard work continues till the time of birth. Thus, at one time a woman called Andege took some ripe bananas to Kisumu in the morning, returned at about 2 p.m., and at 4 p.m. gave birth to her daughter, Rapuoda.

Guessing the child's sex. In guessing at the child's sex before birth, the mothers generally rely on past experience. It is recognized to be very difficult, and even impossible, to predict the sex of the first child. Certain guesses depend on the health of the mother, though such guesses are not made public. For a male child it is believed that the mother should be thin; with a female child, the reverse, and these views are probably based on the assumption that male children sap their mother's energy to a greater degree. This is likewise the basis of

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

843 [846] the custom which confines a female child in the hut with its mother for only three days, whereas a male child would stay with its mother for four days, thus giving her a longer rest. In reality, only those women who have given birth to two or more children seem to be able to make any successful guess as to the sex of their expected child.

The Birth of a Child

844 177 *Preparations.* Among the Christian women, customs connected with the preparation for a birth have largely been dropped; but superstition is still a very real factor in the life of every Luo woman. Hence, for example, the preparation of bedding and clothes before a birth is usually neglected on purpose, the position being even worse in families of low income. When women give birth in the maternity wards, the husbands therefore have to make a hasty preparation during the seven days spent by their wives in hospital.

843 177 [302] Among the pagans, the pain or nausea experienced during the first few months of foetal growth is mitigated by the administration of a certain medicine. When this trouble has ceased the woman is expected to grow long hair which should not be shaved until the child is born. Those pagan women who associate much with Christians, however, have abolished this custom of growing hair, though some of them still take the medicine. Among the pagans, the expectant mother takes a light purgative during the sixth month which is believed to free her from any abdominal impurity. Strong purgatives are forbidden in case they may cause abortion or premature birth.

844 *Assistance during delivery.* The assistance a woman receives when giving birth depends on the circumstances in which she finds herself. There is no ruling laid down

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

cry of the midwives was heard announcing the birth of twins, the news had to be carried to the parents of the woman. This loud cry was intended to scare the evil spirits which had brought about the double birth. With it began a series of taboos on the couple as well as on the twins, the family being virtually isolated from society. For emptying their bowels a large pot was placed in a hidden corner at the back of the house. If either of the twins died during the early period it was thrown into this pot. In place of the usual clothing, the couple had creepers twined around them. The period of taboo closed with a large gathering at which a great deal of beer was drunk. At this final ceremony the dancing was rather obscene and was accompanied by foul language in reference to the couple. These proceedings lifted the taboo from the shoulders of the parents, but the twins continued to be affected until their deaths. Moreover, anything done to one of the twins had to be done to the other also, because they could not be treated as separate identities. Now the attitude has greatly changed and even among pagans these customs are no longer observed. 845 [177]

Similarly, a birth in which the baby's legs appeared first was dreaded. This was ascribed to the work of the evil spirit.

Renewal of marital relationship. Originally it was the custom for the renewal of a marital relationship to take place on the third day following the birth of a female child, and on the fourth day after a male child. No married relatives were allowed to enter the hut to see the baby before the parents of the child renewed their marital relationship. 846 834

Although none of my informants could testify that this practice still exists, it is possible that it persists in certain places. Some of the informants pointed out that [177]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

846 834 177 modern maternity wards have weakened the custom, since women stay in them for seven days and return home after having shown the baby to many of their friends.

751 854 754 854 753 *Protection against witches.* Although Christian mothers are not affected by this kind of superstition, pagan mothers still tie things around the necks of their babies to protect them from malignant glances, these articles being attached when the children are exposed to the view of relatives and friends. Most people believe that babies can be bewitched as soon as their skin begins to darken, and the pagans believe that through magic an ill-disposed person can introduce a worm into the baby's stomach. If this occurs, the baby cries and vomits whenever it is suckled by its mother. In the past when no clothes were worn, it was believed that the mother's breast could also be bewitched. The tradition was that every living person had a beneficial worm in the stomach, and that this worm digested the food eaten. When the worm refused to digest the food, there would be serious stomach trouble which might prove fatal. When a child was bewitched it was believed that its beneficial worm had been replaced by a harmful one.

751 [177] Protection against this harmful worm could supposedly be gained by scratching the body of the child (the forehead, the palm, or the flat of the foot) with some medicine, and it is still said that, if the medicine is sufficiently strong, any evil-eyed man looking at the child with the intention of bewitching it will lose his eyesight. Some fragments of bones or roots of herbs may also be worn for the same purpose. Many of these customs have disappeared in strongly Christianized areas, the Christians themselves having sometimes taken direct action to stamp them out, but nurses are still warned not to let young children play on the roadside, in order to protect their charges from being bewitched.

Childless marriages. Failure to have a child is a great disaster in the home. The idea of the perpetuation of their kind is so deeply rooted in the minds of the Luo people that a childless marriage generally culminates in the breaking up of the home concerned, the husband usually being advised by his relatives to marry a second wife. Although results may prove that it is the husband who is defective, priority is always given to men to prove their fecundity. Thus a woman is forbidden by the social conventions to attempt to prove on her own initiative that she can give birth to children.

If through the second marriage the husband is proved to be sterile, his wives may one by one desert him. On the other hand, this great desire for children may lead him to carry on his name through the secret offices of the woman's brothers-in-law. Otherwise he must face the inevitable fate of having his family broken up.

Women's diet after birth. For the first week after childbirth, the mother's food is limited to gruel, fish, and green vegetables. 'Bo', which is one of the vegetable pulses, is excluded on account of the trouble it gives to the stomach. During this early period meat is not eaten because most women complain that it makes the stomach tight. Hard food, such as boiled maize, is also avoided at this time. Although tea and coffee are occasionally drunk by the more fortunate families, the drink which pleases women most at this time is gruel. They are allowed to take a lot of it as people believe that it helps in the formation of the milk which is so important for feeding the new baby.

The period of this considered treatment is brief, lasting for about a month at the most. Much depends on the economic resources of the family concerned, and the poorer the family is, the shorter is the time that careful attention can be given.

FL11 Luo FL11

582
There are no restrictions as to the number of women a man may marry nor as to the number of his wife's sisters whom he may take to wife. Previous to her marriage a young woman may have as many lovers as she wishes, she is only careful to avoid incestuous connections. The unmarried women have their own quarters in a village and the young men theirs, and they seldom have any further intercourse than that of brothers and sisters; the young men, however, from another village pay visits to the young women during the day and make love to them, and in the evening the women return the men's visit and have sexual relations with them, while other young people sing songs of an obscene character and dance outside the house. Such intercourse is not stopped nor discountenanced by the elder people, as it is a recognised custom. Should any children be born from such relations, no punishment ensues nor are the couple blamed. When a father considers his son old enough to marry, he chooses a woman to be his wife. He then takes a cow and a goat to the parents of the young woman and arranges with them the amount to be paid for the marriage-fee. If the parents consent to the match, when an instalment of the fee has been paid, the bride is conducted by her friends to the home of the young man and lives with him as his wife for ten days: during this time there is daily singing and dancing outside the house where the bride and bridegroom reside, and they take part in the dances. At the end of ten days the bridegroom's parents give a feast to all those who have gathered, and after the feast the friends of the bride escort her back to her parents, who in turn give a feast to the people that accompany their daughter. The bride remains with her parents until her husband is able to obtain and pay the full sum asked for as the marriage-fee. During this time, while the bride is waiting for her husband to bring the marriage-fee, there is no obligation upon her to live a chaste life, and she is free to have as many lovers as before. When, however, the fee has been paid and the bride claimed, she ceases to live a loose life and becomes most chaste. The husband builds his house, either in or near his father's village, and his wife is brought thither. When a man marries

[595] 836 883 [848] 584 585 [837] 591

11: Hartmann M-5 (ca. 1900) 1928 FL11 Luo FL11

the ear of father, mother and child. 852
After 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(kwanyo nech)*. The feast is prepared much like for a baby-boy, but there is no *owinjo*, and the performance with the ladle does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere.

If the husband has more wives, he is not entitled to conjugal rights with 846
any of them until after the birth of a child the feast has taken place, and he has 834
slept again with the mother of the child. If he would brake this rule, the new-born babe would waste away and die *(omiyo nyathi chire)*.

Adultery is reckoned a serious offence by both husband and wife. If the 837
woman knows that her husband is misbehaving in this way, she will refuse 834
cohabitation, for if she is with a child cohabitations would result in a miscarriage. 684
If a woman commits adultery her husband may send her away, and claim the 848
dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her.

A widow is given in marriage to the full brother or the nearest relation 587
of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she bears children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence when the girls born to them grow up and get married, the real brother of the deceased husband will receive the full dowry paid for them minus one cow for the girl, which goes to the real father of the girl for bringing her up.

When the boys born by them grow up and get married they will leave [591]
the kraal and build their own apart, unless their real father helps them to get married by paying the dowry.

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days, not even for nature's call. A hole is dug 945
in the floor of the hut, and an old battered cooking pot is put over it, and this is 852
used as a W. C. During these 20 days new beer is brewed. When the time has [514]
elapsed and the beer is ready, a bull is killed and its hide is dried for the parents [273]
of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or mgera)* mixed with water in a small vessel. She dips her finger in it and

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

this attitude that unmarried girls, as they grow older, are often forced to marry in the end by taking advantage of the institution of polygamy, which acts as a final method of absorption. Although she may live to an advanced age, a single girl is continually tormented by the fact that society does not approve of unmarried girls.

Restrictions. Traditionally, a mature girl is not allowed to enter her father's or her mother's sleeping place, especially if the mother is still giving birth to children. This restriction, although generally ignored by Christians, applies also to the wives of her uncles. Those who are her parents or parents by marriage do not go where a girl receives her male visitors. By custom this hut was built beyond view of the parents' huts and served as a sleeping place for boys. It is considered that a girl who has commenced associating with men should not enter her mother's or father's hut because she would interfere with their powers of reproduction.

Relationship with brothers. The fear of incest has led to the practice of keeping young women's activities as separate as possible from those of their brothers, but free association and conversation concerning their mutual interests generally takes place, since brothers and sisters retain an interest in each others' love affairs. From his sisters, a young man may be informed of things he wishes to know about his girl friend.

Pre-marital pregnancy. Cases of pre-marital pregnancy were very rare in the past, according to most of my informants. But this rarity was not due to the fact that sexual relationships were prohibited. Pregnancy among mature girls was apparently not infrequent from any strict moral code, but from the conscious effort of the girls themselves to guard against it. Because much importance was attached to virginity, it was a matter of personal pride and was carefully guarded. It was a great honour and a

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

source of much social rejoicing to discover that a married woman had been found to be a virgin. Such a bride was given a high prestige among the other women.

In the past, if a woman gave birth to an illegitimate child, her only chance of marriage was to an old man with a number of wives. There was no possibility of occupying the position of chief wife of the family; and the heads of cattle paid were much fewer. The child was taken by the man who legally married her, but she was not allowed to give birth in her own home. Everything was done to get rid of her as soon as possible.

Examples of such pregnancies are very common at present. But although social disapproval is still keenly felt, modern conditions have become more favourable to women in this situation, and an increasing number of them are being married to bachelors. Unlike some communities, no death punishment was ever given. If the occurrence takes place between close relatives the matter is kept secret; in the past, however, the couple could be exiled.

Modern Education and Adolescent Girls

Progress in the education of adolescent girls is hampered because the Luo people do not appreciate its suitability to the environment of their women. To the majority, modern education is associated with clerical work and the many other jobs that men take up after a school career. The position of girls in this scheme is not clearly envisaged.

The social importance attached to marriage is having to adapt itself to a prolonged school career and the raised age for marriage which this implies. An inability to appreciate schooling for girls is also based on a high esteem for the traditional education which it tends to interrupt and weaken.

with territorial unit, is not organised round a symbolic office such as the Shilluk *reth*ship, the Anuak nobility or the Acholi chiefship. The intersection of the segmentary system is the basis of organisation and co-operation. The Lango organisation closely approaches that of the Luo but, until further information is forthcoming as to the exact position of the Lango *rwot* and the political importance of the lineage system, the degree of similarity is difficult to determine. On the basis of present knowledge it would seem that the Lango, with their hierarchy of village headman, *jago* and *rwoth* are more highly organised than the acephalous Luo, with their ritual experts, elders and lineage heads.

THE LUO HOMESTEAD

The homestead, the residence of an elementary, or sometimes a joint, family, is generally called a *dala* (Bantu) or *pachu* (Nilotic). It is surrounded with a thick hedge of euphorbia, in which is a narrow gap forming the entrance to the kraal round which are grouped the huts and granaries.

According to Evans-Pritchard, there is no real village group. The head of the homestead is the head of the family occupying it. Each married man has his own hut, with huts for his wives on either side. Unmarried women live in a hut looked after by an old woman, and single men occupy a bachelors' hut near the gate in order to guard against cattle thieves. Sons often go and found their own homesteads if they wish to be independent. The eldest son eventually builds his wife a hut of her own outside his father's homestead and the younger brothers will later do the same. The large polygynous family thus splits up gradually as the sons extend their own family units and form separate homesteads. This process is completed with the death of the original man *dala* and the inheritance of the widows. The first wife is the chief wife of the homestead, but a husband sets aside so many cattle for each of his wives for use by their families and these are inherited by the sons on the father's death.

INHERITANCE

Property is inherited by a man's sons or, failing sons, by his brother. A widow, on the death of her husband is inherited by one of his brothers, by a distant kinsman, or, if she is still young, by a son born of a different wife. The widow is *ot lyend*, 'the wife of the grave',(1) and children born to her are called after the dead husband who is regarded as their *pater*.

MARRIAGE

Bridewealth

The number of bridewealth animals varies according to circumstances. Before the cattle plagues at the end of the 19th century 20 to 40 cattle were given; in 1932 the usual number was 15 to 20, and since that time the number has been further reduced. According to Evans-Pritchard the bridewealth cattle fall into two parts:(2)

1. *The dho kony*: the animals first handed over by the husband and due to

(1) Evans-Pritchard, *Africa* VI, 1933, p.161. (2) *Ibid.*, p.159.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

When a man marries
591 a second or third wife, he may select another place for his new wife, either in the village near his former wife, or he may elect to take her to some other village. A man who has wives dwelling in different places lives with them in turn. Married
586 women are careful in regard to their relations with men. Should a woman be lax in her behaviour or encourage men to visit her, her husband will send her back to her parents and divorce her.

842 A wife who is proved to be sterile is not divorced, but her
595 parents send her sister to become the man's wife, and he is expected to pay another sum as a marriage-fee for her; but there is no stated time when the sum shall be paid after the woman goes to live with him. The former wife continues to live with him as his wife.

291 **Distinctive dress of married women.** Each woman after marriage makes a girdle with a long fringe at the back and ties the ends together, which gives it the appearance of a tail. The girdle is worn constantly during the husband's life-time,
[765] but, should he die, she takes it off and puts it on the house-roof over the door during the season of mourning to show that she is a widow and is mourning. After marriage a wife scarifies
304 her sides and back in addition to the scarifications she made at puberty. When a woman has a son born, she makes a
352 clay-mound in the middle of the floor in her house for the
● 852 food pot to rest on when the family are at meals.

Birth customs. A wife who expects her confinement calls
844 in an elderly woman to act as midwife. This woman is a person who has had experience in such matters and is herself a mother. When the child is born, the midwife cuts the umbilical cord on an axe handle if the child is a boy, and on a hoe handle if it is a girl. The placenta of a boy is buried outside on the right side of the doorway and that of a girl on the left side. During the first three days the father remains near the house
846 in which his wife and child lie, but the midwife alone enters and attends to the wants of the mother and child. On the third day the father takes a fowl and rubs it on the child's chest and turns it loose, when it becomes the property of the child. When the new moon appears, the parents bathe, and

844 couple of women who have come to assist her, support her shoulders. If the woman is afraid or weak, somebody generally a strong woman is called to *thulgo* her, i. e. she puts her mouth close on the mouth of the patient, and blows her breath down the patient's lungs in order to increase the pressure.

No sooner the child is born or one of the assisting women run out of the hut to pull out of the roof a piece of kaffircorn stalk, which is split leaving a sharp edge. This is used to cut the babe's navel after it has been tied off.

[201] If the babe is a boy the Kaffircorn stalk is pulled out of the roof at the side of the fire place of the hut *(Kor omach* — lefthand side facing the hut). If it is a girl, the stalk is pulled out *Kor athang* — the right hand side. Compare: Burial of children (p. 274).

When the afterbirth has come out the mother takes the child on her lap, whilst somebody runs for a drop of fresh sheepmilk — otherwise never condemned — which the child has to drink. Not until the child has swallowed a drop of this will the mother give the child suck.

846 Immediately after the birth of the child the husband orders a goat to be killed for the mother, and the pot is put to boil, for the mother has a ravenous appetite. Now word is sent to her father, who will kill a goat for his wife, who comes to see her daughter, bringing some of the meat and fish along.

For no purpose except nature's call is the mother to leave the hut within 4 days, if the babe is a boy. Then she takes the child outside, and a little patch of hair is shaven above the ears of father, mother and child.

● 852 After 10 days a bull and a heifer are bled, meat and fish is cooked, simsim is pounded and mixed with rendered butter, and the lot of it is to provide a good feed for the inhabitants of the kraal later in the day. On that day the heads of father, mother and child are shaven clean. Then after the woman is smeared [229] with butter and sprinkled with simsim seeds, seedhulls of a wild plant *(ochok)* are strung on plaited grass *(ogango)* and creeping grass *(mudhowe)* and [301] hung crosswise over the shoulders and under the armpits of the young mother. In the same way she is ornamented with cowrysshells, ordinary beads, beads of smallcircular pieces of ostrich eggs *(rok)* and big iron beads.

When the woman is thus ornamented, a boy, her brother-in-law, is called [263] to hold the child. Now an old woman brings *awinja* (= pounded simsim mixed with rendered butter) and cooked *wande*. She kneads a mouthful of the food, making with her thumb a little pit in it *(ohhowoyo mwoyo)* which she fills with *awinja*, then she puts it on the end of a wooden ladle, used in stirring the food, 4 times to the mouth of the mother. The 5th time she puts it with the help of the ladle in the mother's mouth, who is not allowed to touch the food with her hand. After she has eaten this one mouthful, another mouthful is given in the same way to her young brother-in-law who holds the child.

Then meat, fish, blood and other food is brought for the inhabitants of the kraal. That night the father and mother of the child sleep again together for the first time after the birth of the child *(ohpalo undo nyathi)*.

If the babe is a girl the woman stays in the hut for 3 days, after which the child is taken outside and a little patch of hair is shaven also above

11: Hartmann M-5 (ca. 1920) 1928 FL11 Loc FL11

the ear of father, mother and child. But 10 days later, on the day of the feast, the father's head is only shaven above the ear again. Those of mother and child, however, are shaven clear *(kwanyo wish)*. The feast is prepared much like for a baby-boy, but there is no *ewinja*, and the performance with the knife does not take place. Neither is the woman ornamented like after the birth of a boy; because the girl later on will not belong to that part of the country; she will be married out and live and die elsewhere.

If the husband has more wives, he is not entitled to conjugal rights with any of them until after the birth of a child the feast has taken place, and he has slept again with the mother of the child. If he would brake this rule, the new-born babe would waste away and die *(omiyo nyathi chuw)*.

Adultery is reckoned a serious offence by both husband and wife. If the woman knows that her husband is misbehaving in this way, she will refuse cohabitation, for if she is with a child cohabitations would result in a miscarriage. If a woman commits adultery her husband may send her away, and claim the dowry he has paid for her. However, if she brings forth a child born from adultery he will reckon the child to be his own, as the woman is his, nobody else's for he has properly married her.

A widow is given in marriage to the full brother or the nearest relation of her deceased husband. If she goes to his full brother, or in case he had none, to his nearest relation, and if she begets children by him, then these children will be reckoned to be the children of her new husband. In case her deceased husband has a full brother but she does not like him, or he is still too young to take her as his wife, some other near relative will take the widow. But the children born by them will be called the children of the deceased husband. The present husband is only a borrowed one. Hence, when the girls born to them grow up and get married, the real brother of deceased husband will receive the full dowry paid for them minus one cow for each girl, which cow goes to the real father of the girl for bringing her up.

When the boys born by them grow up and get married they will leave the kraal and build their own apart, unless their real father helps them to get married by paying the dowry.

If a woman has given birth to twins, both she and her husband are not allowed to leave the hut at all for 20 days; not even for nature's call. A hole is dug in the floor of the hut, and an old bottomless cooking pot is put over it, and this is used as a W. C. During those 20 days new beer is brewed. When the time has elapsed and the beer is ready, a bull is killed and its hide is dried for the parents of the twins to sleep on. For on that day some old woman will take away the old hide, which they used for that purpose. The relations of the woman also kill a bull and brew beer, which they bring along to the village where the twins are born. After their arrival the father and the mother with the twins sit down near the entrance of the kraal, together with an old woman who beats a drum. The visitors from the woman's home, the people of the kraal and of all the neighbourhood in turn go up to the mother of the twins, who has got some white clay *(rongo or angow)* mixed with water in a small vessel. She dips her finger in it and

11: Hartmann M-5 (ca. 1928)1926 FL11 Loc FL11

875 852 smears a little clay in front of both ears of all the people who come to the feast, and each of them do the same to the mother in return. All of them decorate their necks and waist with *bucendwe*, a creeping plant; then they start a most immodest dance, scarcely covered with their grasskirts they simulate the copula, and the vilest songs, which no decent person could ever listen to. After the dance they enter the kraal where food is ready. Then they have the beer. The relations of the woman stay over for the night, but all the others go home.

852 *Mumi Kumu* is a similar dance, which is indulged in, when a woman has given birth to a child, of whose conception she did not get aware of for some considerable time. The people who come to this dance are far fewer; it does not last so long either. In stead of a bull only a goat is killed by the relations of the woman, and some beer is brewed for the feast. Other ceremonies are the same as after childbirth under usual circumstances.

Betrothal and Marriage.

584 Before any other arrangements are made, a boy intending to get married tells his parents that he wishes to look out for a partner through life. If the father has any cattle towards the dowry he will agree, and tells his son to make his choice, and inform her relations. When he has found a likely girl he invites a couple of friends, one of whom at least knows the relations of the girl well *(utebi)*. With his friends he pays a visit to the kraal of the girl, and enters the *simbu* i. e. the hut in which the boys of the kraal live.

No sooner have they entered the *simbu* or the girls of the place go to greet the visitors, after which they bring them pipes and tobacco and go to fetch or prepare some gruel for them to drink. In the meantime the *utebi* goes to the hut of the particular girl's father to tell him that a friend of his has come for his daughter. The father will inquire from the *utebi* what kind of lad the boy is, whether he is of good family, whether he is not the son of a witchdoctor, whether he can pay a decent dowry, ect.

If the father agrees the *utebi* goes back to his friends in the *simbu* and reports that the father is willing, whereupon the boy proposes to the girl. There and then the girl decides whether she agrees or not. If she does not want the boy, then all is finished and visitors go home at once. If she agrees, they stay for the night. They sleep in the *simbu* separate together with the other boys and girls.

583 Then, in former years, in the early morning the visitors would catch the girl after she had left the *simbu*, and take her to her fiancé's village *(muku)*. On account of a government regulation, by which the dowry is now more or less fixed, this practice is no longer adhered to.

583 The boy and his friends go home. He informs his parents, who now dispatch the *utebi* back with somebody else to pay the first instalment of the dowry, 585 usually 2 or 3 head of cattle. They stay over the night, and in the morning they catch *(muku)* the girl, for she pretends not to like going along. After they have had some gruel to drink, the boys who brought the cattle more or less drag her out of the kraal. The girls from her village strip her absolutely naked, and the boys from there follow those who fetch the girl to take from them some of their orna-

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

A GIRL OF THE BARI TRIBE

but until the child begins to cut its teeth. The mother does not go out to cultivate for nine days after the birth. If a woman has had two children previously who have died, she follows the same ceremony as that described among the Bantu Kavirondo. When the child has been brought back by an old woman, it is redeemed by the father, who then bores the lobe of the right ear and inserts an *orwing* of brass wire. The child is thenceforth called "Owiti," if a boy; if a girl, "Awiti," meaning "the child that has been thrown away." The old woman who picks up the child is regarded as its foster-mother. Twins are considered lucky, though their arrival is attended by a good many ceremonies and by propitiatory dances which are of an obscene nature.

When a person dies, the corpse is immediately taken out of the house. If it be a woman, her brothers-in-law dig the grave in the verandah of the house. The corpse is buried on its left side with the head under the head. In the case of a woman's death, her relatives and friends come and wail. Her husband presents each clan that attends with a goat. The mourners stay for three days. The hut in which a person has died is vacant for a month. The neighbours then meet together and drink beer, and the house is broken down. Upon the death of a man his brother digs his grave, and he is buried in the house of his first wife, if she is still living. If she is dead, he is buried in the verandah of his own house. Men only wail for one day. After that only the women wail, at first for three days, and then at dawn for fifteen days.

As a sign of mourning the women wear a string of beaded fibre round the forehead. They also wear a black tail fringed with white strings for about a month. Others smear themselves with white earth. Relatives of

16: Northcote G-5 (no date) 1907 FL11 Luo FL11

583 chicken, some *ostrose*[1] and some native beer. He goes away again, having had no
584 intercourse with his intended, and returns in a few days' time and goes through the form of carrying her off; she stops at his village for some days and the important rite of cooking the first dinner for him is gone through; this may be taken to intimate that she accepts him as her husband. She then goes home and the husband pays a portion of the dowry; he comes again and carries her away and pays another portion, and so on, till the dowry is paid off and the bargain is ratified. Should the woman prove childless, or if she dies shortly after the marriage, the dowry can be reclaimed by the husband, though it is more usual for her sister to take her place. Should she, at the time of marriage, be possessed of children, legitimate or otherwise, they become her husband's property. The dowry is also recoverable if the woman deserts him for another man.

Children are sometimes contracted for marriage at a very early age, but in such a case, the girl remains with her parents until the age of puberty. The value of the dowry has greatly decreased since the cattle plague of 1892, but is again increasing. Before that date twenty head of cattle, besides goats, grain, etc., was not uncommonly asked and obtained. To-day seven head of cattle is a handsome "*dot*," and the price has been known to fall as low as one bull and twenty goats, though a heifer and a bull is the usual minimum. The birth of the first child is also an occasion for a feast; frequently, a child is named after the hour at which it
951 was born, *e.g.*, *onyango*, morning; *oding*, noon; *odiambo*, afternoon; *otieno*, night. On other occasions some deceased relative appears to the mother in her sleep shortly before birth, and his name is adopted; or, if a child be born posthumously, the father's ghost appears and dictates the name. The Jaluo are very fond of nicknames, which are often passed on to descendants, though their significance is lost; *e.g.*, *obele*—the man who owned much cotton; *olimk*—the man who killed an elephant. Other nicknames are given on account of some personal peculiarity; *e.g.*, *obongo*—the man like a locust.

763 A funeral, however, is the greatest ceremony of all. While the sick man is dying his relatives howl in chorus round his hut, while the doctors rattle stones in gourds and puff clouds of tobacco smoke around the invalid, their object, undoubtedly, being to drive away the evil spirits. Next day there is a great dance,
764 at which all the deceased's relations and friends turn up; if the dead man is a chief the whole clan is represented. Every man is dressed in full war paint and brings his best bull along with him. For a while they stay in the village lamenting, while the mother or chief wife of the deceased adorns herself with the dead man's goat skin and his tuft of hair, as mentioned above, and then runs round and round the village rattling a gourd and singing incantations. Then the visitors come out, having refreshed the inner man with beer and tobacco, and proceed to charge up and down, hanging on to their bull's tails and pricking the unfortunate beasts to encourage them to go faster. When thoroughly exhausted they collect

is a most important grouping intermediate between the compound family and its individual members. It is a semi-autonomous domestic unit with its own kitchen economy, its own property rights in cattle, goats, sheep, chickens, land, tools, granaries, and food stocks. Correspondingly it is responsible for its own building and repairs, fuel and water collecting, food provision and allocation from harvest to harvest, and has its own ritual rights and obligations. But the husband is an element common to them all and, having his own rights and duties in respect of these matters, binds them closely together. Livestock are herded co-operatively, not only for all the elementary families of a homestead, but for several homesteads together. The husband is the titular head of a corporate group, not an absolute rightholder.[1] He allocates land, cattle, and other property accruing to the compound family group among its elementary families, and this allocation limits the proportion in which it will eventually be inherited by the sons in each elementary family. He is also able to make levies of property for special purposes from all his elementary families. But in all situations involving social groups wider than the homestead, its head is subject to the decisions of the leader-in-council of the lineage segment to which he belongs. The exclusiveness of elementary families is potentially high, but in practice depends on the skill of the homestead head in securing and maintaining harmony, and on the mutual compatibility or otherwise of co-wives. When these factors favour, co-wives may be seen co-operating in many tasks, taking it in turns to supply the husband—or one another's children—with food, combining as a team for garden work, or sharing one another's water-supply. But it cannot be denied that the Luo regard friction between co-wives as being a more normal state of affairs. Behind these situational variations lies the inviolable right of the husband to regular cooked food from each wife, of each wife to regular sexual attention from her husband, and the general responsibility of each elementary family for its own self-maintenance granted its rightful assistance from the husband in his proper part of each task.

The rearing of children is woven into this framework. The baby's first contacts are naturally with its mother, who may not finally wean it till it is about two years old, unless as a result of a subsequent pregnancy she has to do so sooner; for suckling a child with a younger sibling in the womb is regarded as robbing and endangering the latter. The baby sleeps in its mother's hut at night and sleeps and later plays near it during the day. It is more closely associated with the other members of its own elementary family, especially the female ones circling round the hearth for the preparation and cooking of food. Other members of the compound family will be hardly less well known from their presence together inside the homestead hedge, but all non-members of the homestead will be comparative strangers except very close relatives or near neighbours who are constant visitors within it.

Babies of either sex are soon each put in the charge of one of the older unmarried girls, probably a real or classificatory sister. This brings them in contact with the world outside the homestead, where a number of these nurse-girls (*Dhudhou jopiel*) meet regularly in informal play groups. By the time children can run about on their own they too form play groups, including both girls and boys from several homesteads. Gradually the interests of the two sexes diverge, the boys going off with

[1] The Luo homestead in all phases of its life-cycle would remain the definition of a corporate group in Weber's sense. See *Theory of Political and Economic Organization*, p. 139.

INFANCY AND EARLY CHILDHOOD

Feeding

Under one year. For the first month of a baby's life its chief food is its mother's milk. But when the mother's milk is insufficient, gruel may be given as early as at two to three weeks old. Although cow's milk is now sometimes used instead of gruel, it is still chiefly regarded as a modern introduction by the missionaries in an effort to promote infant health. 853 [177] [197]

Between the ages of one and three months, gruel and breast-feeding play about equal parts. When the mothers go out to work, suckling tends to be limited to mornings and evenings. The average age at which babies are given gruel is one month. From the third to the sixth month milk from the breast and gruel continue to form the child's main diet, but after this, gruel begins to prevail over breast-feeding. Although maize flour is occasionally used in the preparation of gruel, the usual flour for this purpose is obtained from sorghum and eleusine, a species of millet. Whenever possible a little sour milk is added to the mixture. Between five and six months certain children have frequent tastes of adult food given to them by their nurses. [262]

Although nurses are allowed to give gruel to the children, difficulties in handling a baby sometimes result in under-feeding, which is often made worse by the low food-content of the gruel itself. Through training by nurses, babies are accustomed to adult food before their mothers actually give it to them, so it can happen that [254]

20:Orninde I-5 (ca. 1948) 1952
FL11 Luo FL11

853 when a mother is eating she will hear her child cry out [154] for some of her food.

From six to nine months, gruel continues to be the staple article of diet. In certain strict families adult food is not given until the child is over a year old. Babies fed on cow's milk begin using adult food during the first or second month.

Restrictions on the suckling of babies. It is considered a [784] breach of taboo for a nursing mother to suckle her [761] neighbour's child. This restriction is based on the fear that some woman with poor milk may, in suckling a [177] baby, kill it. One of my informants pointed out that in the early days of missionary work an attempt to break this taboo had failed. She said that many of the children thus suckled had died, and the attempt had been aban- [603] doned. One exception to the restriction, however, is that of a mother-in-law. In cases of necessity she is permitted to suckle her daughter-in-law's child because it is assumed that her milk has stood the test.

853 595 In rare instances there seems to be different treatment of male and female children in a polygamous home with regard to suckling. Some of my informants stated that inter-suckling is permitted if all the nursing mothers have female babies.

[587] Nevertheless, the taboo against inter-suckling of male babies is reinforced by the fact that it is possible for a son to marry one of his father's younger wives. Hence a woman refuses to suckle a child who might become her husband on the death of the father.

853 [177] The social restriction with regard to the suckling of infants is still observed with rigidity, and there are no evidences of a change even under the impact of modern ideas.

Methods of feeding. No force is used in feeding young babies. A little gruel in a small container is put to the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

lips. The mouth is gently raised while a small amount of the gruel is let in. Forcible feeding takes place when children begin to push the container from their lips, preferring their mothers' milk. [853]

In forcible feeding, the child's head is rested against the mother's breast while the feet are firmly held in position between her thighs. If the child is difficult to manage, an assistant may be called to hold its hands. The mother rests the edge of the left hand below the child's lips and pours gruel in the hollow thus formed by the hand. While the child is crying, she closes the nostrils by pressing its upper lip against the openings. Thus in attempting to draw air through the mouth the child takes in a mouthful of gruel. The mother or the nurse may then dip her hand in cold water and wipe the child's abdomen in an attempt to cool the rapidly-swallowed food. After it has drunk a considerable quantity the child is set free. If the mother is present, it may finally be pacified by a short period of suckling.

Although women insist on this form of feeding because of its traditional value, it is also a method they use when they are in a great hurry. To have time to do their other work they must feed their children as quickly as possible. A child which has been given gruel does not cry for food for a long time.

The feeding of younger children is generally left to nurses, though often they are very young and lack experience by European standards. Sometimes a child may be found unconscious through over-feeding or prolonged choking. When this occurs, a responsible person holds the child by the legs, head downward, and then runs with it, shaking out the contents of its stomach; after which the child is laid down in a cool place to regain its strength. In extreme cases the child may die. Some children are quite unable to take gruel, and in [854] [757]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

153 such circumstances they have to depend on their mothers' milk.

Although the time and nature of her work may force a woman to feed her child at certain hours, there is otherwise no fixed time for feeding babies. If the mother is present, the child is suckled whenever it wants to. Thus babies having such treatment grow up with a particularly strong liking for their mothers' breasts. As soon as a baby is big enough, the mother begins to limit her suckling and to increase the frequency of gruel-taking. The frequency of suckling is greater for babies between one and three months, the intervals increasing with the age of the child. Daily absence of the mother when she is working at a distance may also impose longer intervals between the successive sucklings than would be the case if the mother were nearby, or within the village. Chil-
[177] dren in more enlightened families are started on cow's milk after one or two months, and are given gruel after six months.

There is a widespread belief that gruel strengthens the bones, and therefore should be a very important article of diet just before the child begins to walk.

Cleanliness

154 There is a general slackness in the washing of children by Luo mothers, which increases as the children grow older, but sometimes, especially among the more ad-
[178] vanced people, they are kept tidy regularly. It may be of interest to know that, in the past, they were washed early every morning in cold water in the belief that this would make them strong. Whenever the children empty their bowels they are cleaned with old rags or soft leaves. The limited supply of old rags makes the use of leaves more common.

Bedding and clothes. No clothes are especially made for the babies.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

Childless marriages. Failure to have a child is a great disaster in the home. The idea of the perpetuation of their kind is so deeply rooted in the minds of the Luo people that a childless marriage generally culminates in the breaking up of the home concerned, the husband usually being advised by his relatives to marry a second wife. Although results may prove that it is the husband who is defective, priority is always given to men to prove their fecundity. Thus a woman is forbidden by the social conventions to attempt to prove on her own initiative that she can give birth to children.

If through the second marriage the husband is proved to be sterile, his wives may one by one desert him. On the other hand, this great desire for children may lead him to carry on his name through the secret offices of the woman's brothers-in-law. Otherwise he must face the inevitable fate of having his family broken up.

Women's diet after birth. For the first week after childbirth, the mother's food is limited to gruel, fish, and green vegetables. 'Bo', which is one of the vegetable pulses, is excluded on account of the trouble it gives to the stomach. During this early period meat is not eaten because most women complain that it makes the stomach tight. Hard food, such as boiled maize, is also avoided at this time. Although tea and coffee are occasionally drunk by the more fortunate families, the drink which pleases women most at this time is gruel. They are allowed to take a lot of it as people believe that it helps in the formation of the milk which is so important for feeding the new baby.

The period of this considered treatment is brief, lasting for about a month at the most. Much depends on the economic resources of the family concerned, and the poorer the family is, the shorter is the time that careful attention can be given.

20:Omnde I-5 (ca. 1948) 1952
FL11 Luo FL11

512 462 264 [853] [356] *Daily rhythm of family duties.* The daily programme of a mother with a young child is divided into two major phases, corresponding with the morning and the evening meals. In the morning the activities include the preparation of gruel for the child, preceded by suckling it and sweeping the house. When prepared, the gruel is left with a nurse, to be given to the child when it cries. The mother then goes to the field or to any major work of the day. Preparation of the morning meal begins at about 9 a.m., and by 10 a.m. the family disperses again, the men perhaps to herd cattle or to go to market, and the women to fetch firewood or bring water from the river.

[178] The idea of having a meal freshly prepared in the morning is of recent origin. In the past, people ate cold food preserved from the previous evening meal. A great proportion of what is eaten during the week comes from the gardens.

[178] In former days, women were expected to prepare an afternoon gruel for their husbands at about 3 p.m. This is still the custom in some families, but modern women are quite ignorant of the practice in its traditional form.

868 619 *The social attitude towards male and female children.* The difference in the social attitude towards male and female children arises from considering them in relation to the future of the lineage to which they belong. A male child is looked upon as a dynamic element in the lineal structure. On the other hand, a female child, though a potential source of wealth, is regarded as an exporter of fertility from her parents' lineage to the lineage of her husband. Thus, if she becomes the mother of many children, her larger numbers are looked upon with disfavour as taking something away from her original family. This results in a superstitious feeling which affects her visits to the parental home.

[842] [593]

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

is a most important grouping intermediate between the compound family and its individual members. It is a semi-autonomous domestic unit with its own kitchen economy, its own property rights in cattle, goats, sheep, chickens, land, tools, granaries, and food stocks. Correspondingly it is responsible for its own building and repairs, fuel and water collecting, food provision and allocation from harvest to harvest, and has its own sexual rights and obligations. But the husband is an element common to them all, and, having his own rights and duties in respect of these matters, binds them closely together. Livestock are herded co-operatively, not only for all the elementary families of a homestead, but for several homesteads together. The husband is the senior head of a corporate group, not an absolute rightholder.[1] He allocates land, cattle, and other property accruing to the compound family group among its elementary families, and this allocation limits the proportion in which it will eventually be inherited by the sons in each elementary family. He is also able to make levies of property for special purposes from all his elementary families. But in all situations involving social groups wider than the homestead, its head is subject to the decisions of the leaders-in-council of the lineage segment to which he belongs. The exclusiveness of elementary families is potentially high, but in practice depends on the skill of the homestead head in securing and maintaining harmony, and on the natural compatibility or otherwise of co-wives. When these factors favour, co-wives may be seen co-operating in many tasks, taking it in turns to supply the husband—or one another's children—with food, combining as a team for garden work, or sharing one another's water-supply. But it cannot be denied that the Luo regard friction between co-wives as being a more normal state of affairs. Behind these situational variations lies the inviolable right of the husband to regular cooked food from each wife, of each wife to regular sexual attention from the husband, and the general responsibility of each elementary family for its own self-maintenance granted the rightful assistance from the husband in his proper part of each task.

The rearing of children is woven into this framework. The baby's first contacts are naturally with its mother, who may not finally wean it till it is about two years old, unless as a result of a subsequent pregnancy she has to do so sooner; for suckling a child with a youngster sibling in the womb is regarded as robbing and endangering the latter. The baby sleeps in its mother's hut at night and sleeps and later plays near it during the day. FL11 Luo FL11

the local prophet (*jubilo*). When he returned to the village from his visit to the *jubilo*, he cursed his wife as follows: "I wish the disease which killed my heifers would kill you, my wife, for your daughter is a whore who has brought the disease of her womb to my cattle." From the evidence, the woman seemed to have planned her death carefully. She made her daughters swear that they would not be married to anyone who would ever give her husband cattle. She distributed all of her belongings to them and placed a curse on the village to the effect that her husband should never be able to marry another wife. She then entered her house and hanged herself.

Since that time, the Luo pointed out, his daughters have all eloped with persons who have not paid bride-wealth and no other woman has ever consented to marry him or to live with him.

The next case is typical of many which involve jealousy at the taking of a second wife, especially without the first wife's permission, or as in this case, expressly against her wishes. My informant was living near the village where the suicide took place and his mother became involved in it. The story was told to me in his mother's presence and she helped with the details.

Suicide Case No. 18.

A man, Okech, who was happily married, invited his wife's sister, Apolo, to come to live at his homestead to act as a nurse-maid for their first child.*

* This is common practice among the Joluo and often the "nurse" (*japidi*) is later married by her brother-in-law, especially if the sisters co-operate and agree to be happy together. Frequently the *japidi* will form a strong attachment to her brother-in-law, and marriage becomes desirable or even necessary. If a man marries a *japidi*, she becomes known as *ngeri ateko*, the wife of the same blood, and the children of both wives share the same hut and trace descent through the elder sister. The term *ateko* is also used to describe a girl given to replace a sister who was unable to bear her husband a son; it therefore does have a slight connotation of stigma.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

856 constant help from the mother, the nurse, and other members of the family, the child is able to sit up without support.

[854] The practice of straddling the child on the hip begins during the sixth month. From this period there is a rapid development of its manipulative skill. Between the seventh and eighth months the child begins to crawl about on the floor, and will crawl away from wherever it is seated. As the child's manipulative skill develops he begins to pick up things that attract the eyes, often knocking them down repeatedly. The mouth is also used in testing the properties of articles. There is thus some difficulty in preventing the child from putting dirty things into its mouth.

If a child is not watched it may eat a large quantity of soil, a practice facilitated by its surroundings, the floor and ground in front of the house being bare earth. It is [164] therefore not surprising that children of this age frequently suffer from serious stomach trouble. Even before [854] the children begin to sit up, the nurses, who themselves [857] are only between six and eleven years old, do not effectively prevent them from touching dirty things, because they are sometimes tempted to run away to play, leaving the babies to look after themselves.

856 A child is persuaded to walk by holding its hands and 868 helping it along. In this process the older person repeats the words 'Taa, taa,' in a monotone. The practice is continued daily until the child is able to walk; but as soon as it can support itself on its feet the mother or nurse may move away a short distance and try to induce it to come nearer. Every member of the family takes a great interest in all this and loses no opportunity to help the child.

According to my observations, cooing and the earliest symptoms of speech begin to come into evidence in the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 ing interest in her body and in the opposite sex. It may
856 be said that the loss of concern for her charge and concentration on herself is a sign announcing the emotional disturbances of adolescence. Young girls of this age now

● 854

modern maternity wards have weakened the custom, since women stay in them for seven days and return home after having shown the baby to many of their friends.

Protection against witches. Although Christian mothers are not affected by this kind of superstition, pagan mothers still tie things around the necks of their babies to protect them from malignant glances, these articles being attached when the children are exposed to the view of relatives and friends. Most people believe that babies can be bewitched as soon as their skin begins to darken, and the pagans believe that through magic an ill-disposed person can introduce a worm into the baby's stomach. If this occurs, the baby cries and vomits whenever it is suckled by its mother. In the past when no clothes were worn, it was believed that the mother's breast could also be bewitched. The tradition was that every living person had a beneficial worm in the stomach, and that this worm digested the food eaten. When the worm refused to digest the food, there would be serious stomach trouble which might prove fatal. When a child was bewitched it was believed that its beneficial worm had been replaced by a harmful one.

Protection against this harmful worm could supposedly be gained by scratching the body of the child (the forehead, the palm, or the flat of the foot) with some medicine, and it is still said that, if the medicine is sufficiently strong, any evil-eyed man looking at the child with the intention of bewitching it will lose his eyesight. Some fragments of bones or roots of herbs may also be worn for the same purpose. Many of these customs have disappeared in strongly Christianized areas, the Christians themselves having sometimes taken direct action to stamp them out, but nurses are still warned not to let young children play on the roadside, in order to protect their charges from being bewitched.

This woman was the second wife (*nyachieu*) of a wealthy man who preferred his first and third wives to her. This preferential treatment gave them courage to abuse her often and to show her that they were the only wives of the husband. On one occasion, when she was quarrelling with the husband, the other two wives joined in and beat her and abused her. The husband looked on in amusement. Shortly after, he took hold of her son and began to cane him, saying that he was as bad as his mother. His mother tried to interfere, but was prevented from doing so by her co-wives, who continued to beat her. As soon as it got dark that night, she disappeared. Her son had run away to her mother's home. The people from the village and her relatives searched for her for three days, and at the end of the third day, her people began to mourn as if she were dead. The head of a goat was buried in front of her house to represent her body, for they were certain that she was dead and her body devoured by wild animals.

[855]

20:Ominde I-5 (ca. 1948) 1952

the babies. With the exception of a few children in progressive households, both pagan and Christian children go without clothes; and even when they have them their provision is meagre. There is, however, a tendency for Christian children to be better clothed than those in pagan families, and the latter continue to walk naked for a much longer time.

Bedding is scanty. Dried hides, mats, and old clothes are used, the child's bedding and the mother's being usually the same. Very rarely does the mother sleep apart from her child, and only a few modern parents form an exception in constructing small beds for their children. In the daytime, when asleep, they are generally laid in some shady place beside the house, or on hides, old rags, or mats. Those who have beds may use them, but the majority of children are placed in the open where dust not infrequently blows into their mouths.

Mental and Physical Development

According to the mothers interviewed, the earliest signs of mental and physical development in babies are smiling and lifting of the arms, actions which take place after the second month. This early smile may not be an expression of pleasure but merely an imitation of the mother, who begins to tickle her baby while smiling herself in order to induce it to smile. This induced smile is more noticeable after the third month.

During the fourth month, the child generally plays alone wherever it is put down, provided that it has no serious illness. By the fifth month the senses of hearing and seeing have so far developed that when it hears a noise, the child listens and looks in the right direction.

The period of sitting the child up begins during the sixth month, although trials are made early in the fifth month, while in the course of the seventh month, with

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

856 not begin to speak until after two years, when they are
868 barely able to construct short simple sentences.

Discipline

861 Formal training in discipline begins as early as the
855 seventh month, at the time when the child may put some dirty object to its lips. Thus a mother, finding her child with soil in its mouth, may slap it gently as she removes the soil, or the hands of the child may be tapped with anything convenient. A child crawling towards the fire would be immediately pulled away, and sometimes it might be frightened with the glowing end of a burning twig in order to impress the danger upon its mind.

856 It is never certain when a child is first going to walk,
164 for the conditions under which children are brought up are such that it is impossible for them to escape being seriously ill at one time or another. Hence the period is largely determined by the health of the child. The average time ranges from eleven to fourteen months. A child who develops very rapidly through the early stages causes its parents much worry, for it is believed that a fast-growing child never survives.

855 *Effects of the child's emotions.* The mother's attitude to-
[844] wards the emotions of the child is based on the deep impression left on her mind by the strain of the birth. Thus, I have come across women who told me quite convincingly that whenever they heard one of their children cry out vigorously they again felt the pain they had experienced during its birth. A mother tolerates the emotional outbursts of her child not only because she loves it but even more because she struggled to bear it. This seems to be the real cause of the so-called humanity of women towards children in contrast with the indifference sometimes shown by men. Instead of setting the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

mother against the child, the child's emotions of anger or suffering have the effect of reminding the mother of their physiological connection. When a mother is unable to pacify her crying child she generally feels a quite personal sense of depression. [855] [152]

On the other hand, signs of pleasure in a child give its mother the greatest satisfaction. If a child has a happy nature, even the most critical of neighbouring relatives are pleased, and frequently comment or compliment the mother upon it. The desire to share the emotions of her children leads a mother to begin laughing with them and tickling them while they are very young. [152]

FL11 Luo FL11

II

CHILDHOOD

Between Two and Six Years

856 *Physical development.* Between the ages of two and five the means of locomotion mature. Healthy children are able during this period to walk and run about, and, even as early as this, young boys and girls begin to show subtle differences in their motor behaviour. Female children are less vigorous in their muscular movements, while male children tend to exaggerate them. But on the whole both sexes make good use of this newly acquired power. There is an increased desire to move about, intensified by a wish to meet young acquaintances at play.

855 The work of the nurse then changes. Instead of looking
857 after the child, she does simple housework, such as fetching water from the stream or well, and collecting firewood. In place of being its foster-mother she becomes the child's major playmate.

From this time onwards children grow rather thin. It is assumed that this slenderness of body is a sign that they are growing up. It is also believed that at this time male children are stronger than their female contemporaries.

856 *Mental development.* The mental development of a child
868 of this age is marked by a predominance of fantasy play, and a rapid mastery of spoken language. The imaginative play occupies longer periods than the other activities. The child learns language from its playmates as well as from the conscious efforts of members of its family. The effectiveness of the speech taught by its parents becomes more pronounced while the orders given begin to be better understood.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

The next step is for the child to be taught the names of those who visit the family. By this means it also learns how to know the relatives who are not living in the family home. Children of two to five know very few people beyond the members of their own family circle. Thus Obala, at three years old, did not know who I was, although I had been to her home and talked to her many times. Her parents told me that this was due to their never having told her my name. §47

Feeding. The food children eat at this stage is the same as that given to the adult members of the family, the only difference being that the children are not restricted to feeding at particular times. However little it may be, a certain amount of food is always left for them in the pot. §24 §55

The children go out to play when the adults go to their different duties. In the middle of the day they return much exhausted and ask for the portion put aside for them after the morning meal. When there is only one child, the mother, before leaving for her day's work, tells it where to find this food. The varied and exacting activities of a child of this age make food an important factor in its life. [§57]

Play

The play groups. The child begins its association with the play groups through the action of the nurses. At first the nurse, next to the mother, is its chief playmate. Through her the child comes into contact with children from neighbouring families and thus acquires friends and playmates. Although it takes the child a long time to make new friends, its social life begins as early as the seventh month when the nurses, wishing to play nearby, seat two babies side by side where they may learn to play together. §57 §72

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

157 524 repeated until all the fallen stones have been collected, when it is considered that the game is won. The rules are, however, more complicated than this brief sketch has made them appear.

Discipline

857 865 During the period between two and six years, the children have a tendency to play with their friends until late in the evening. The playground may be quite removed from the house; hence parents often have to take strict action to keep their children within the bounds of their homesteads. When they are disobedient, the [864] normal disciplinary action is whipping. At this age female children are instructed to sit with their knees together. If one of them sits carelessly she is either warned or whipped. Among her duties are the fetching of firewood or dishes for food, and if she refuses to fetch firewood for anyone in the village she may be whipped. [868] She cannot, of course, be asked to bring fire from a neighbouring home, or to light it, because she lacks the experience necessary for this task. Crying without a cause is sternly repressed and if it is persisted in it earns the child a whipping.

• 855 863 *Training in decency.* Luo children from two years upwards are greatly neglected so far as clothes, washing, and training in decency are concerned. Hence the general appearance of these children is that of dirty little creatures whose clothes are stained with the soil in which they play. Some mothers admit that they fail to wash their children for as long as three days. Other mothers do not worry at all, assuming that their children will go with the older children to wash themselves.

863 Children old enough to walk about are strictly instructed not to empty their bowels inside the home but in front of the house beyond the enclosure. Once shown

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

862 child. Having in the beginning created the child's liking for her breasts she must resort to crude methods to shift the child's interest to other sources. Hence weaning is not only a break in the time-honoured connection between mother and child, but also a significant psychological factor in the child's development. A closer analytical study of children would help to show how far the fears established during infancy influence their later emotional life.

Parent-child Relationship

856 593 The relationship between parents and children from the age of two to six is principally determined by two factors: discipline and the provision of food. Parents feel that children of both sexes tend to prefer their mother partly because of her frequent contact with them, and even more because their food in its ready form is under her control.

In feeding children a mother's sympathies often prevent her from restricting their food, but the reverse situation may exist and sometimes we find a father who loves his child so much that he will give it all the food it desires. If the father is more severe than the mother in this respect the child naturally prefers the mother, and, similarly, a child will prefer a father who feeds it to a mother who restricts its food.

855 593 603 A further complication arises when the grandparents come into the matter. So delicately balanced is this relationship depending on food and discipline that the slightest difference is sufficient to draw the child towards those who favour it. This means that if the grandparents offer it better conditions, the child will stay with them most of the time. Hence, when I was once talking to a couple I know, I was informed that their daughter would not remain with them but preferred her grand-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

parents—a fact which had already struck me during my visits to the family. Although I have frequently visited them, I have seldom found the children there, and even more rarely at meal times. This situation would have become more pronounced when the children were weaned.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 ing interest in her body and in the opposite sex. It may
856 be said that the loss of concern for her charge and concentration on herself is a sign announcing the emotional disturbances of adolescence. Young girls of this age now

854
291

NURSE: AYOMA

857 consider nursing beneath their dignity, and their revolt
856 is encouraged by increasing association with members of the opposite sex who would disdain talking to a child-nurse.

● 855 *Feeding.* The girls of this age group[5] eat normal adult
264 food, at the same time as adults, but the younger members of the group occasionally have a little food kept for them by their mothers. The consideration shown them as children depends on whether there are others younger

[5] [i.e. From six to eleven years old - Analyst.]

20:Omnibe 1-5 (ca. 1948) 1952
FL11 Luo FL11

855 264 than themselves. As the girls grow older, feeding at odd times is restricted. The girls eat with the mother while their brothers eat with the father. The mother of the family takes particular care that the brothers get some food and even though she may go without herself, she sees that the children eat.

868 *Female education at school-going age.* The traditional education as given by the parents is strictly utilitarian. Its main aim is to prepare the girl for her future as a wife in a family and as a mother of children.

868 312 The girls accompany their mothers or older associates to fetch water, the younger ones being given a very little water in a small pot, usually used for milking. Larger pots are given to the girl as she grows older and stronger, the girls of six and seven being eager to imitate their older playmates. A few of the male children like to go to fetch water with similar containers, but their mothers do not encourage them. The mother of a young girl watches her carefully to see if she is interested in imitating these activities before giving any encouragement.

868 [241] [252] When the girl, at the age of eight or nine, expresses a desire to dig, the mother takes her to a garden early in the morning to let her do so, and releases her at about eight o'clock before the sun becomes too hot. At this time too, if a grinding stone is available, the mother teaches her child to grind corn, this being a continuation of the interest in grinding soil shown at play. The older girls of the group are instructed in giving gruel to the young children they nurse.

868 252 861 In the preparation of food, the girls first learn how to prepare gruel for the babies. But proper cooking comes very gradually and they learn it under the constant observation of the adult members of the family. The food cooked is first tasted by the parents only, when criticisms are openly made and encouragement of future

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868
252
861

success given. In this atmosphere the girl slowly learns to master the art. It is not until she is thoroughly competent that she is allowed to prepare food for visitors.

Relationship with elder children in the family. At first the young girl grows up in fear of and with a submissive attitude towards her older brothers and sisters, the attitude of fear decreasing towards her sisters as she begins more and more to share the same activities. Thus by the time the girls reach adolescence there is a growing feeling of companionship which brings them closer to each other in their everyday tasks, and any dominating attitude becomes consequently weaker. But among boys this attitude persists into adulthood, weakening only with the independence which adult life brings with it. Bullying is less noticeable among girls; boys of the school-going age become very tyrannical with their younger brothers and sisters, and their behaviour leads to frequent squabbles.

593
855

[857]

The attitude of a girl towards her older brothers and sisters is influenced by the treatment she receives from them. She can be sent on an errand by any older member of the family. Thus an elder child often passes orders on to her juniors since the errands in a large family are many and frequent. In this way the young girl learns to avoid and perhaps to dislike certain members of the family. As she grows older, she in turn exercises disciplinary action over those beneath her.

Parental attitude. The father plays a rather detached role, but in actual fact he retains a deep-seated interest in his growing daughter as a future promise of wealth. Though fundamentally mothers are equally interested in sons and daughters, they have at this time a more direct influence over their girls. A mother is interested in her daughter partly through her maternal responsibility and partly because of the girl's immediate value to the family, the father being more definitely concerned

20:Ominde 1-5 (ca. 1948) 1952
FL11 Luo FL11

593 with the male children. Maternal control over the
855 young girl is very great and remains about the same when she reaches adolescence, though at this time the father's control becomes increasingly essential in keeping the growing personalities of the family in order.

857

YOUNG GIRLS GOING TO FETCH WATER

857 THE BEGINNING OF SPECIALISED ACTIVITIES
868 The school-going age marks the period when male and female children part company. Young girls become increasingly occupied with domestic work, such as fetching water and firewood, tending babies and watching the fire, while male children of the same age continue to play in groups for a much longer period. Apart from herding, which is now less general than in the past, boys of school-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

The strongest tie of relationship exists between the children of one mother. This close relationship extends to the maternal as well as the paternal grandparents. Children may be taken to the maternal relatives while they are still young, or they may sometimes go for visits when they are a little older. Although they share the same father, the relationship of the children with those of the other houses is much less close, because the mother in each house thinks first of the future of her own children. For this reason the undue wealth of any one particular house is viewed with alarm in the other houses and a mother will maintain a constant watch on the other sections of the family lest their successes should overshadow her own children. 595 603

When a child goes to stay with its maternal grandparents it is often spoilt by their too readily shown affection and their unwillingness to teach it discipline. Hence parents complain that children who spend most of their time with their maternal relatives are unruly and difficult to manage when they return to their homes. 603 855

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

the babies. With the exception of a few children in progressive households, both pagan and Christian children go without clothes; and even when they have them their provision is meagre. There is, however, a tendency for Christian children to be better clothed than those in pagan families, and the latter continue to walk naked for a much longer time.

Bedding is scanty. Dried hides, mats, and old clothes are used, the child's bedding and the mother's being usually the same. Very rarely does the mother sleep apart from her child, and only a few modern parents form an exception in constructing small beds for their children. In the daytime, when asleep, they are generally laid in some shady place beside the house, or on hides, old rags, or mats. Those who have beds may use them, but the majority of children are placed in the open where dust not infrequently blows into their mouths.

Mental and Physical Development

According to the mothers interviewed, the earliest signs of mental and physical development in babies are smiling and lifting of the arms, actions which take place after the second month. This early smile may not be an expression of pleasure but merely an imitation of the mother, who begins to tickle her baby while smiling herself in order to induce it to smile. This induced smile is more noticeable after the third month.

During the fourth month, the child generally plays alone wherever it is put down, provided that it has no serious illness. By the fifth month the senses of hearing and seeing have so far developed that when it hears a noise, the child listens and looks in the right direction.

The period of sitting the child up begins during the sixth month, although trials are made early in the fifth month, while in the course of the seventh month, with

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

856 constant help from the mother, the nurse, and other members of the family, the child is able to sit up without support.

[854] The practice of straddling the child on the hip begins during the sixth month. From this period there is a rapid development of its manipulative skill. Between the seventh and eighth months the child begins to crawl about on the floor, and will crawl away from wherever it is seated. As the child's manipulative skill develops he begins to pick up things that attract the eyes, often knocking them down repeatedly. The mouth is also used in testing the properties of articles. There is thus some difficulty in preventing the child from putting dirty things into its mouth.

If a child is not watched it may eat a large quantity of soil, a practice facilitated by its surroundings, the floor and ground in front of the house being bare earth. It is [164] therefore not surprising that children of this age frequently suffer from serious stomach trouble. Even before [854] the children begin to sit up, the nurses, who themselves [857] are only between six and eleven years old, do not effectively prevent them from touching dirty things, because they are sometimes tempted to run away to play, leaving the babies to look after themselves.

856 A child is persuaded to walk by holding its hands and 868 helping it along. In this process the older person repeats the words 'Taa, taa,' in a monotone. The practice is continued daily until the child is able to walk; but as soon as it can support itself on its feet the mother or nurse may move away a short distance and try to induce it to come nearer. Every member of the family takes a great interest in all this and loses no opportunity to help the child.

According to my observations, cooing and the earliest symptoms of speech begin to come into evidence in the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

eighth month. When Ageng'o was eight months old he repeated the same performance every time he saw me come in. First he clapped his hands, uttering a sound like 'Aaa, Aaa'; then he clasped them together, pressing them repeatedly against his lips while he made the sound 'Aa baa ba'. This pleased his mother, who was so excited that she spoke to the child in adult language. In addition, Ageng'o could seize two maize cobs, bring them together in front of him, lie on his stomach and push them round in a circle.

There was also a conspicuous development of pleasure when he began playing. There can be no doubt that he derived great enjoyment from pushing the maize cobs along, because that kind of play was usually accompanied by a great deal of noise not intended to attract the attention of anyone. Having scooped the ground with a stick, he would throw it away and, with his fingers spread out, sweep the ground before him. All this indicated the multiple experiences of a developing mind which aimed at satisfying its own curiosity by exploring into the nature of things. A child of this age has no fear of fire until it is scorched by a glowing ember.

At the time when the child begins to say '*Baa, baa, baa*', the mother trains it to imitate sounds of names like '*ba-ba* (*babu, mama, mamu*)'. But the use of adult language in talking to the baby begins as early as the first month. Thus when taking up a baby of one or two months, a mother may say, '*Bi mama*' (come my mother) or '*Bi wuora*' (come my father), according to whom the child was named after. This of course means nothing to the child at such an early stage. Following '*ba-ba*' and '*ma-ma*', it is taught the names of things and people in the family. Gradually a child gets to know these, as well as the words for a few things including food. Next it is taught how to ask for things. On the whole, children do

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

856 not begin to speak until after two years, when they are
868 barely able to construct short simple sentences.

Discipline

861 Formal training in discipline begins as early as the
855 seventh month, at the time when the child may put some dirty object to its lips. Thus a mother, finding her child with soil in its mouth, may slap it gently as she removes the soil, or the hands of the child may be tapped with anything convenient. A child crawling towards the fire would be immediately pulled away, and sometimes it might be frightened with the glowing end of a burning twig in order to impress the danger upon its mind.

856 It is never certain when a child is first going to walk,
164 for the conditions under which children are brought up are such that it is impossible for them to escape being seriously ill at one time or another. Hence the period is largely determined by the health of the child. The average time ranges from eleven to fourteen months. A child who develops very rapidly through the early stages causes its parents much worry, for it is believed that a fast-growing child never survives.

855 *Effects of the child's emotions.* The mother's attitude to-
[844] wards the emotions of the child is based on the deep impression left on her mind by the strain of the birth. Thus, I have come across women who told me quite convincingly that whenever they heard one of their children cry out vigorously they again felt the pain they had experienced during its birth. A mother tolerates the emotional outbursts of her child not only because she loves it but even more because she struggled to bear it. This seems to be the real cause of the so-called humanity of women towards children in contrast with the indifference sometimes shown by men. Instead of setting the

CHILDHOOD

Between Two and Six Years

856 *Physical development.* Between the ages of two and five the means of locomotion mature. Healthy children are able during this period to walk and run about, and, even as early as this, young boys and girls begin to show subtle differences in their motor behaviour. Female children are less vigorous in their muscular movements, while male children tend to exaggerate them. But on the whole both sexes make good use of this newly acquired power. There is an increased desire to move about, intensified by a wish to meet young acquaintances at play.

855 857 The work of the nurse then changes. Instead of looking after the child, she does simple housework, such as fetching water from the stream or well, and collecting firewood. In place of being its foster-mother she becomes the child's major playmate.

From this time onwards children grow rather thin. It is assumed that this slenderness of body is a sign that they are growing up. It is also believed that at this time male children are stronger than their female contemporaries.

856 868 *Mental development.* The mental development of a child of this age is marked by a predominance of fantasy play, and a rapid mastery of spoken language. The imaginative play occupies longer periods than the other activities. The child learns language from its playmates as well as from the conscious efforts of members of its family. The effectiveness of the speech taught by its parents becomes more pronounced while the orders given begin to be better understood.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 disciplined to prevent her from escaping the much
593 cherished traditional education. Discipline is weakened, however, when the nurse is not the daughter of the woman engaging her. In these circumstances the mistress, fearing to lose the nurse's services, tolerates behaviour she would not countenance in her own daughter.

868 In the process of training, the young girl is expected to be competent in household duties as early as possible. Mothers have frequently told me that girls who begin practising household duties later than the school-going age, are generally very inefficient in domestic work; thus in their early discipline mothers protect themselves against future blame for poor training.

Apart from the primary motive of training the young girl as a prospective wife, the mother is influenced by her desire to make her daughter of practical use to her-
[594] self as soon as possible. The help from girls of school-going age greatly relieves the constant pressure of a woman's household tasks. This training also makes a girl observe feeding manners more strictly.

861 In Luo families, a young girl is at the mercy of every-
593 one except her younger brothers and sisters. When disobedient she is whipped with a stick. She thus becomes equally tyrannical towards her juniors when they disobey her. One girl told me that if her sister disobeyed her she seized the child, knocked her down, and beat her. This reflects the general attitude.

857 *Nursing.* Although some girls of this later age act as nurses, nursing proper is more characteristic of the earlier stage. When she nears the age of eleven, the young girl rebels against nursing and runs back to her home or, if nursing her own brothers and sisters, escapes to relatives out of reach of her immediate family. This
● [856] break takes place as soon as the breasts begin to develop and is perhaps a revolutionary step caused by the grow-

IV

ADOLESCENCE

857 593 In the interim period between childhood and adolescence there comes a time when a girl's ability to deal with domestic work is more advanced than her physical and mental development. It is during this period that the mother, still occupying a central position as adviser and supervisor of the girl's work, finds difficulty in the management of her daughter. Since the domestic work of her household is heavy, the mother uses all kinds of pressure to induce her daughter to do as much as she can.

856 [572] The girl's life at this time is characterized by her increased interest in boys and desire to come into contact with them. The friendships established during childhood with other young girls are weakened by the development of a new object of friendship in the opposite sex. During this time the breasts of most girls develop noticeably. The girls show great interest in this development and employ various means to stimulate it. An instance of this interest can sometimes be seen among those who stuff clothes in their bosoms to exaggerate the size.

On the whole, the period differs only in the fact that the girls definitely aspire to be grown-ups and are also more interested in friendship with boys.

Characteristics of Adolescence

883 This new period is the time when the mother leaves her daughter to bring her knowledge of domestic work to perfection by her own efforts. As compared with the school-going age, there is little or no interference from

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *won koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted. 789

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witchdoctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' (*jaakingo*) which, among the Gemi tribe is practised by the blacksmiths.(4) 753 756 [754]

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth. 846

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances. 845

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting [857] 881 304

241 Besides weeding, there is much to be done to protect the crop,
[789] Hail storms do a lot of damage at times, and to protect the crops a " medicine " is employed called ' migalo magalo pe." This consists of herbs tied in a bunch to the top of a pole about 6—8 feet high, which is stuck in the middle of the field. (Herdsmen too, use this
[231] to keep themselves dry while out with the cattle, and I have seen a herdsman accompanying the cows with these herbs tied to the top
[674] of his spear.) Except in time of famine, stealing from the crop is unknown, which contrasts favourably with complaints made from time to time that Natives steal maize and coffee from European farms. In their own community such an offence is practically unknown. But
241 four-legged depredators are a serious problem in certain localities.
417 Fields are enclosed in fences of the branches of thorn trees, laid on the ground, and these do give a certain protection against wild pigs,
136 monkeys and baboons. But they are of no use against hippo and elephant. To protect crops, mainly sweet potato, against the hippo it is the practice to erect a small temporary hut, which is occupied at night by a guard armed with a couple of spears. It must be a weary business, for the potatoes are cultivated close to the lake edge where mosquitoes swarm, so between the hippo and the mosquitoes the guard
[324] must have a trying time. In old days before the Game laws came in, organized hunts were held, which were very successful.

241 The most difficult animal is, of course, the elephant. These have
136 disappeared from Central Kavirondo but still infest districts like Mirunda and Sakwa in South Kavirondo. They can do heavy damage both to millet and sweet potato. The beating of pots and pans is tried to scare away the elephant, while occasionally the more daring venture forth from the hut to throw stones or otherwise drive away the beasts. This is an operation attended with peril in the dark of the night, and occasionally lives are lost in this way. Lives too are lost through guards mistaking their fellow guards for wild animals. Jok, one of the most famous of ancestors of the Luo, is said to have lost his life in this way. The story is that before going off to drink beer, he told his sons to go on guard in the field that night. They refused to his face, but when he had gone thought better of it, and went on guard. He returned from the beer drink, and went to see what was happening in the field, believing that there was no guard. His sons mistook his footsteps for that of a pig, and speared him with fatal results. Similar things still occur from time to time.

241 Birds, especially weaver birds, are a pest as the grain crop
136 ripens. Scarecrows are employed, both mechanical and human. Of the former an inverted cooking pot on the top of a short pole is a
● 857 common device. Boys are employed in large numbers when the birds are most troublesome, and their harsh cries are quite a part of the

241 life of the country-side. Ofttimes the boys are armed with slings from
136 which stones are projected at random into the midst of the crop, or
857 into the midst of a flock of birds as they rise. One of the reasons why the Luo denude the land of trees is because they give harbourage to their bird enemies.

241 They are wise to insect pests also, and have a greater belief in
136 their remedies than many a farmer has in the aids supplied by our
789 civilization. The medicine is called by two names, " yadh miri " or " yadh lisese." It is employed against a small red and black beetle, called by the Luo " Nyanginja " which eats the flower of the millet, thus preventing a crop. The medicine man who prepares it must be a man of peaceable disposition and character, not a quarreller or disputer with his neighbours. The whole success of the medicine depends on the absence of disputation and quarrelling, and of the grosser forms of vice, like adultery. No adulterer may be supplied
[837] with the medicine, for his very handling of it would nullify its usefulness, not only for himself, but also for his neighbours. All must be peace in the community until the harvest is reaped. Unlike other medicines, which are tied to a pole and left to work their influence, " yadh miri " is made into a decoction, which is sprinkled over the growing crop at eventide. I have seen the operation at a place called Maranda in Sakwa, Central Kavirondo. It was then being used against maize borer. At a time when this pest was giving a good deal of trouble to European farmers, I heard a man who was back in the Reserve on leave from a farm in the Kitale district, pour scorn on the methods used by Europeans with various sprays. He was by way of being one of the more progressive men, but he had nothing but absolute faith in the efficacy of " yadh miri."

578 Crops damaged by domestic stock gave rise to many an angry
685 passion. The owner of the crop had liberty to chastise personally the herdboy (or man) through whose carelessness the stock were left untended. If the herd were a lad he could be cuffed and thumped without being able to proceed against the assailant. Nor did the father protest, provided the chastisement were in reason, for he knew that his son had rendered him liable to a claim for compensation. As likely as not he would add his own quota to the punishment already meted out. If the owner feared that he would get the worst of it in a personal encounter with a herdsman, then he had his remedy at law.

241 When the crop is ready for harvesting it is the duty of the men to do the reaping. In the case of millet, this is a laborious business, calling for judgment, for not all the heads would be ripe, and some must be left to ripen after the bulk has been reaped. It is the task
[462 of the women and children to pack the crop into the grain baskets
857] and carry it to the grain stores. In the case of millet it is quite

241 Similarly, during this time she must be careful where she walks. She
841 can ruin a crop by walking through it. But, of course, in this case, the would suffer with the other members of the family.

462 From early childhood the girl is brought up as an agricultural
787 labourer. There was no class of women divorced from the soil. The
791 only class whose labours in agriculture were lightened were the women who belonged to the divining cult of " SEWE." Sewe is the spirit of divination and is supposed to have descended on those who have been delirious in illness. The delirium is the sign of possession. The devotees of the cult are mainly women, and they are a fairly common sight as they go about their avocation. They are skilled beggars as
[301] well as diviners. With their bodies festooned with strings of beads, shells, bells and other barbaric ornaments, they pass from kraal to kraal, and standing with their bodies leaning forward supported by a
[431] hand resting on a short stick they sing songs of the countryside and and are rewarded by presents of small baskets of grain. In this way women who have been ill are enabled to help to replenish the grain stores, which have probably run low during the illness.

241 Gradually a change is coming over the life of the women, due to
177 white influence. Ploughing by the men with teams of oxen, is setting
252 women free for other tasks. This movement is by no means wide-
462 spread, but it has begun, and its effect on the women has been great. Even if the husband has no team and plough himself, many wives do not rest content until the husband has hired a plough owner to come along and plough up the land. It is not unusual for ploughs to be taken 15 miles for this purpose. Again, the use of hand mills of the " Colonist " type, is easing women of much labour at the grind stones. These are much more common than ploughs, probably there are twenty mills for every plough in use. This is partly accounted for by the fact that the mills are turned by hand power, not by oxen. At this labour girls and women take their share, but whereas you would never see a man down on his knees at the grindstone, you do see them turning a mill. New activities are employing the time of many women, and those who have learned to knit or make palm mats in recent years are rapidly increasing in numbers.

CHILD LABOUR:

● 857 Generally speaking, from early childhood, all are required to make some contribution to the activities of the home. Girls for the fields, and boys for herding, is the broad division of labour, though the boys also lend a hand in the fields, and, very occasionally, a girl or woman may be seen herding. With the opening up of
593 avenues of wage-earning to the boys on coffee and tea estates, and in
[464 other forms of employment, the male child is being made by impecuni-
651] ous parents to make his contribution to the family hut tax.

FL11 Luo FL11

shave their heads, taking care to keep separate the hair which is cut off. This hair is hidden away in some place near, by preference in a rat-hole or in some hole where it is not likely to be found again.

Birth of twins. At the birth of twins the parents remain together in one house for ten days, and the midwife waits on them. When this time of seclusion ends, a small pot of blood is drawn from the neck of an ox, cooked and given to the parents to eat. After the meal they are escorted to the river, washed, and their heads shaved. Their house is then swept and the floor smeared with cow-dung, and friends come and dance in the village and drink beer. The mother takes the twins a round of visits which lasts several days, but she returns home each night to sleep. At each house she visits the people give her presents of grain. When the visits have been made the mother brews beer with the grain she has received in presents, and her friends again gather to dance and to drink the beer.

Initiation ceremonies. Children live in the same village with their parents and under their control. Until marriage they lead a free and happy life, with few wants and cares. The boys assist in herding cattle, and the girls help their mothers in their fields and also carry wood and water and assist in cooking. Their duties are light and there is no force beyond argument used to make them work. Children imitate their elders in seeking ornaments to wear and in smearing their bodies with oil and red or white paint. When they come to the age of puberty, their four front teeth in the lower jaw are extracted and they are initiated in the customs of the clan. For four days they remain in the house, after which they go about visiting their friends and receive presents of fowls. Girls go through the same ceremony as boys in having their teeth extracted, but, in addition, their bodies are scarified on the sides and back. Should there be excessive haemorrhage when teeth are extracted, the parents send to the man who has the bracelets of the deceased person after whom the boy is named and borrow them, and the youth wears them until the bleeding ceases. When the ceremony of extracting the teeth is over, the boys are sent to live in the boys' quarters

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

is a most important grouping intermediate between the compound family and its individual members. It is a semi-autonomous domestic unit with its own kitchen economy, its own property rights in cattle, goats, sheep, chickens, land, tools, granaries, and food stocks. Correspondingly it is responsible for its own building and repairs, fuel and water collecting, food provision and allocation from harvest to harvest, and has its own ritual rights and obligations. But the husband is an element common to them all and, having his own rights and duties in respect of these matters, binds them closely together. Livestock are herded co-operatively, not only for all the elementary families of a homestead, but for several homesteads together. The husband is the titular head of a corporate group, not an absolute rightholder.[1] He allocates land, cattle, and other property accruing to the compound family group among its elementary families, and this allocation limits the proportion in which it will eventually be inherited by the sons in each elementary family. He is also able to make levies of property for special purposes from all his elementary families. But in all situations involving social groups wider than the homestead, its head is subject to the decisions of the leader-in-council of the lineage segment to which he belongs. The exclusiveness of elementary families is potentially high, but in practice depends on the skill of the homestead head in securing and maintaining harmony, and on the natural compatibility or otherwise of co-wives. When these factors favour, co-wives may be seen co-operating in many tasks, taking it in turns to supply the husband—or one another's children—with food, combining as a team for garden work, or sharing one another's water-supply. But it cannot be denied that the Luo regard friction between co-wives as being a more normal state of affairs. Behind these situational variations lies the invariable right of the husband to regular cooked food from each wife, of each wife to regular sexual attention from the husband, and the general responsibility of each elementary family for its own self-maintenance granted its rightful assistance from the husband in his proper part of each task.

The rearing of children is woven into this framework. The baby's first contacts are naturally with its mother, who may not finally wean it till it is about two years old, unless as a result of a subsequent pregnancy she has to do so sooner; for suckling a child with a younger sibling in the womb is regarded as robbing and endangering the latter. The baby sleeps in its mother's hut at night and sleeps and later plays near it during the day. It is most closely associated with the other members of its own elementary family, especially the female ones circling round the hearth for the preparation and cooking of food. Other members of the compound family will be hardly less well known from their presence together inside the homestead hedge, but all non-members of the homestead will be comparative strangers except very close relatives or near neighbours who are constant visitors within it.

Babies of either sex are soon each put in the charge of one of the older unmarried girls, probably a real or classificatory sister. This brings them in contact with the world outside the homestead, where a number of these nurse-girls (Dholuo *jopidi*) meet regularly in informal play groups. By the time children can run about on their own they too form play groups, including both girls and boys from several homesteads. Gradually the interests of the two sexes diverge, the boys going off with

[1] The Luo homestead in all phases of its life-cycle would sustain the definition of a corporate group in Weber's sense. See *Theory of Political and Economic Organization*, p. 135.

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

the herds and, by emulation of the age group next above them, slowly acquiring proficiency in the typical adult male pursuits, while the girls are drawn into the domestic tasks of the elementary family, food preparation and cooking, fetching water, and minding babies.

The young boys of a play group sleep together in the goat hut of a homestead when they no longer share their mother's hut at night. The girls sleep together in the hut of some widow of the group who is past childbearing age. This is the most important institution for the transmission of female culture. Girls only leave it at marriage, and till that time they are continuously trained in the adult roles expected of them. Boys at puberty build themselves bachelor huts (Dholuo *simba*) in which they sleep and where they also entertain their girl friends. A group of young men makes a formal assignation with a group of nubile girls from a segment of another maximal lineage into which marriage is possible, and visits and entertainments are held to and from the one lineage territory to the other. The two groups pair off with one another into sex partnerships which last till the groups break up and reform. A youth graduates out of this company of *simba* age-mates at marriage.

Authority over children rests jointly with the parents. That of the mother is likely to be the most effective in the early years, and she always holds a strong sanction in her manipulation and control of the food-supply. The father is ultimately responsible for the order of the family, and his discipline is stronger than the mother's as the children grow older. There is a relation of friendly intimacy between alternate generations. Children are on easy terms with their grandparents and will certainly use the latters' households as an escape from home discipline or as a more generous source of food if need or opportunity arises. Children are at no period encouraged to live away from home with other relatives, but parents allow them to circulate freely among a number of homesteads wherever they find the best welcome and the most plentiful food, among families which are usually both neighbours and close agnatic relatives. Brother and sister have no material reasons for conflict and there is a strong and lasting bond of affection and reliance between them, institutionalized in the symbolism of a number of ritual occasions, and linked to their important later relation to one another's children as mother's brother (*nera*) and father's sister (*waya*). Apart from parents, these are the only two consanguine relatives of the first ascending generation who are picked out by special kinship terms. The newly married woman is under the authority of her mother-in-law, and a man's relation to his wife's parents is marked by deep respect and avoidances. Ritual practices as well as personal attitudes emphasize the importance of fertility and virility,[1] and the value attached by a man to a numerous offspring and the ability of his wives to provide it. The Luo are aware of the male and female parts in procreation, but say that 'the woman's blood goes for nothing'. This seems a necessary inference from the nature of lineage organization rather than vice versa, for they would not argue that there is any tendency for children to resemble the father rather than the mother, nor do they permit marriage with close consanguine kin though of an unrelated lineage. It is

[1] e.g. the special rites which have to be carried out for a nubile girl dying unmarried, a wife dying without children, a widow dying before remarriage, a man dying when one of his wives is still childless, or a man dying before he has experienced sexual intercourse, the latter being treated similarly to a barren woman.

121 later studies can be based. I have also worked on the assumption that a study of one's immediate background is an essential preliminary to wider investigation.

124 In conducting these studies of social life I have followed the questioning method, and having obtained information from individuals I later discussed that information with a number of other people. I was therefore able to check mistakes arising from purely individual opinion. Altogether nineteen women and eight men were interviewed with regard to family conditions and problems of inter-family relations. I also supplemented by personal observation the information given me on the treatment and feeding of babies. When watching children at play I was sometimes obliged to keep out of view, as children normally feel shy when under the direct observation of an adult. The only group whose play I observed closely was composed of a child-nurse of about ten, my brother's son of eight months (born on August 26th, 1946), my sister's daughter of six, a son of four, and another elder son of about nine. At times I actually watched them playing, but on other occasions I had to visit their play-haunts and examine the articles they had left behind. I noticed that the locations varied very little. This small group gave me a good opportunity to study the play preferences of the two sexes.

123 857

123 With the more mature girls I was able to engage in 124 free discussion, making use of the traditional opportunities for conversation at marriage ceremonies. In short, my field observations were distributed throughout a range of life from infancy to maturity.

FL11 Luo FL11

856 constant help from the mother, the nurse, and other members of the family, the child is able to sit up without support.

[854] The practice of straddling the child on the hip begins during the sixth month. From this period there is a rapid development of its manipulative skill. Between the seventh and eighth months the child begins to crawl about on the floor, and will crawl away from wherever it is seated. As the child's manipulative skill develops he begins to pick up things that attract the eyes, often knocking them down repeatedly. The mouth is also used in testing the properties of articles. There is thus some difficulty in preventing the child from putting dirty things into its mouth.

If a child is not watched it may eat a large quantity of soil, a practice facilitated by its surroundings, the floor and ground in front of the house being bare earth. It is [164] therefore not surprising that children of this age frequently suffer from serious stomach trouble. Even before [854] the children begin to sit up, the nurses, who themselves [857] are only between six and eleven years old, do not effectively prevent them from touching dirty things, because they are sometimes tempted to run away to play, leaving the babies to look after themselves.

856 A child is persuaded to walk by holding its hands and 868 helping it along. In this process the older person repeats the words 'Taa, taa,' in a monotone. The practice is continued daily until the child is able to walk; but as soon as it can support itself on its feet the mother or nurse may move away a short distance and try to induce it to come nearer. Every member of the family takes a great interest in all this and loses no opportunity to help the child.

According to my observations, cooing and the earliest symptoms of speech begin to come into evidence in the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

II

CHILDHOOD

Between Two and Six Years

856 *Physical development.* Between the ages of two and five the means of locomotion mature. Healthy children are able during this period to walk and run about, and, even as early as this, young boys and girls begin to show subtle differences in their motor behaviour. Female children are less vigorous in their muscular movements, while male children tend to exaggerate them. But on the whole both sexes make good use of this newly acquired power. There is an increased desire to move about, intensified by a wish to meet young acquaintances at play.

[855 857] The work of the nurse then changes. Instead of looking after the child, she does simple housework, such as fetching water from the stream or well, and collecting firewood. In place of being its foster-mother she becomes the child's major playmate.

From this time onwards children grow rather thin. It is assumed that this slenderness of body is a sign that they are growing up. It is also believed that at this time male children are stronger than their female contemporaries.

856 868 *Mental development.* The mental development of a child of this age is marked by a predominance of fantasy play, and a rapid mastery of spoken language. The imaginative play occupies longer periods than the other activities. The child learns language from its playmates as well as from the conscious efforts of members of its family. The effectiveness of the speech taught by its parents becomes more pronounced while the orders given begin to be better understood.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

The next step is for the child to be taught the names of those who visit the family. By this means it also learns how to know the relatives who are not living in the family home. Children of two to five know very few people beyond the members of their own family circle. Thus Obala, at three years old, did not know who I was, although I had been to her home and talked to her many times. Her parents told me that this was due to their never having told her my name.

Feeding. The food children eat at this stage is the same as that given to the adult members of the family, the only difference being that the children are not restricted to feeding at particular times. However little it may be, a certain amount of food is always left for them in the pot.

The children go out to play when the adults go to their different duties. In the middle of the day they return much exhausted and ask for the portion put aside for them after the morning meal. When there is only one child, the mother, before leaving for her day's work, tells it where to find this food. The varied and exacting activities of a child of this age make food an important factor in its life.

Play

The play groups. The child begins its association with the play groups through the action of the nurses. At first the nurse, next to the mother, is its chief playmate. Through her the child comes into contact with children from neighbouring families and thus acquires friends and playmates. Although it takes the child a long time to make new friends, its social life begins as early as the seventh month when the nurses, wishing to play nearby, seat two babies side by side where they may learn to play together.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 593 As the child grows older it begins to play by itself. Parents also amuse their children, but because they are generally away from the village, the children must either play with the nurses or by themselves. Before the child has learnt to talk, the play between it and the nurse is that of inducement to laughter or fright. Older children between two and five merely copy what the nurses do. These nurses, who are sometimes the children's own sisters, act as their instructors and demonstrators in the different play activities.

857 524 *Play activities.* Dolls like those existing in European society are unknown among Luo children. The children play with things they pick up, like stones, leaves—dry or green—and many other natural articles. In short, they adapt their environment to their own needs. They mostly prefer bright objects, and after the end of the day's play they return home with a load of playthings. These they keep in some corner, ready for the next day. Thus the younger children go on day after day bringing in new toys and throwing away the old. As we shall see later, the older children, or nurses, make their own dolls.

857 526 Once the children can walk and understand other children's language, the older ones may hide, calling for the younger ones to try to find them—a game resembling 'hide and seek'. Some parents maintain that a child 867 of five is able to tell lies merely becuase he or she has had contact with older children already able to tell lies. But the habit of giving wrong interpretations to what they perceive is very common. Thus Otieno, having once suffered from a thorn-prick, mistook any hard object underfoot for a thorn. He was also fond of giving false alarms. I was frequently interrupted by the announcement of his father's return, and these announcements were often untrue.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

There is no rigid separation of the sexes in these play groups, although there is a clear distinction between the tendencies of the two sexes in any single gathering. The activities are largely imitative of real activities in adult life, falling into definite types, which develop progressively. 857

Female children imitate the activities of the women. They also imitate funeral ceremonies in which both men and women take part. A child isolated from its own sex may be found doing things customary to the other sex, with whom it spends its play hours. Male children build houses; dig gardens; mould bulls, motor cars, trains and carts. Female children concentrate on those activities leading to the preparation of food and care of babies. 857 868

Though there is no strictly-defined list into which all these activities may be fitted, it remains for future investigators in the field of psychology to discover the degree of invention and diffusion of children's play activities. At the moment we must be content with mentioning their main features.

In every instance the activities pass from simpler to more complex forms as the mind behind them develops. Certain of these games in their more advanced forms are carried out in hidden places because the children begin to take actual things, like food, for playthings, some being taken during the mother's absence. Hence, we find that the older children are afraid of playing where they would be observed by their parents.

On being introduced to the play activities, a girl-child might begin with the grinding of the soil, which is done over a small area of cleared ground. Later, the grinding is done on a flattish stone, a leaf being placed below to receive the supposed flour. This is an imitation of the mothers or sisters when they are grinding corn,

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 868 and is an imitation taking place even among children who do not see grinding stones in use. It is therefore like a vanishing feature of a culture surviving in the form of children's play activity. Leaves of plants or trees are put into a broken piece of pot (*balatago*) with a little water to represent either meat, fish or green vegetables in the process of being cooked. Small dried branches may be used to represent the fire, but actual fire is not used at this early stage. These are mainly make-believe activities in which the children persuade themselves that they are doing real things.

In the rather advanced activities the younger act as servants to the older children, who send them here and there to fetch the necessary articles and also instruct them to keep the supposed fire burning. Between the ages of six and nine, female children, as I have already mentioned, use real things in imitating the preparation of food. Thus, during the mother's absence nurses and other older children may take corn or flour, water and salt, to be made into porridge (kuon). They may also tear off a portion of fish or meat to be cooked in the play huts, which are generally constructed in some hidden place behind the village. Nevertheless, the vessels used are still merely broken pieces of pottery.

The play shelters themselves are small enclosures made of leafy branches. Having used the huts for several days the children abandon them or set fire to them, and there are occasions when actual houses have been set on fire during the absence of the grown-ups. If this happens, nothing is done to the children, for children are everywhere considered to be 'foolish' and capable of any mischief. [861] [858]

Sometimes millet is boiled in old small tins or broken pots. On the whole, the method of cooking is extremely crude, nevertheless, it is significant in that it shows the [524]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

independent progress of the youngsters towards the activities of adult life. At times they are so proud of their successes that they even show their prepared food to their parents; and parents are generally pleased to taste what their children have prepared, even though the articles may not be well cooked. 857 868

Female children may also imitate activities involving the care of babies. They make a mould of a baby and a nurse-child, using leaves and some rags for bedding and clothes. The mould-child may be given to one of the younger children, who carries it and so learns how to look after babies. Sometimes maize cobs are used instead of the moulded clay. Children may also imitate the death of a child, and all the children in the group join in the mourning. [524]

Female children are very fond of singing the songs they hear older children sing at festivals. At this age they have a greater inclination to sing than male children, and their songs sometimes help them to quiet crying babies. [533]

As a pastime the nurses engage in 'Kora', a game played with small smooth bits of stone or rounded pieces of broken pottery. This game has a series of rules which every player must observe. Younger children imitate the older ones but are not very successful because their minds and muscles are as yet immature, and they lack the steadiness and precision required for the game. It is interesting to watch, and girls as old as even twelve years take an active part in it. The stones are collected in the palm, then thrown into the air while the back of the hand is turned to receive them, the object of the game being that more than one of the stones thrown into the air must come to rest on the back of the hand. Then by a series of trials one stone is thrown into the air while another on the ground is picked up in time to receive also the stone which has been thrown up. This is 857 524

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 524 repeated until all the fallen stones have been collected, when it is considered that the game is won. The rules are, however, more complicated than this brief sketch has made them appear.

Discipline

857 865 During the period between two and six years, the children have a tendency to play with their friends until late in the evening. The playground may be quite removed from the house; hence parents often have to take strict action to keep their children within the bounds of their homesteads. When they are disobedient, the [864] normal disciplinary action is whipping. At this age female children are instructed to sit with their knees together. If one of them sits carelessly she is either warned or whipped. Among her duties are the fetching of firewood or dishes for food, and if she refuses to fetch firewood for anyone in the village she may be whipped. [868] She cannot, of course, be asked to bring fire from a neighbouring home, or to light it, because she lacks the experience necessary for this task. Crying without a cause is sternly repressed and if it is persisted in it earns the child a whipping.

855 863 *Training in decency.* Luo children from two years upwards are greatly neglected so far as clothes, washing, and training in decency are concerned. Hence the general appearance of these children is that of dirty little creatures whose clothes are stained with the soil in which they play. Some mothers admit that they fail to wash their children for as long as three days. Other mothers do not worry at all, assuming that their children will go with the older children to wash themselves.

863 Children old enough to walk about are strictly instructed not to empty their bowels inside the home but in front of the house beyond the enclosure. Once shown

III

THE SCHOOL AGE

From Six to Eleven Years

857 868 The school-going age for the Luo girl is characterised by its transitional nature. It is chiefly a time of useful activity, for it is this age to which society has assigned the duty of nursing, and young girls begin and end their nursing service during this period. The mother now transforms the free day of play activity into real work and mobilizes the potential abilities of the young girl for her traditional education. The benefit reaped by the family is a secondary result, because the training given at this stage is part of a long process of education for married life. So far as the girl is concerned, the interest shown in nursing is more intense in the earlier phase of this age—at about eight to nine years.

With the increasing maturity of her mental life, the young girl begins to take an interest in the household duties of older girls, and thus associates nursing with girls of a younger age. We therefore find among the older girls of the age-group a section which despises nursing. The general domestic work of the age includes collecting firewood, fetching water in small containers, and keeping the fire burning while food cooks during the absence of the mother. Firewood is collected from [313] round the village or sometimes further afield in company with older girls. In the groups the older girls may direct the younger ones where to find good firewood, but most of the collecting is done individually by the [312] girl herself. The quantity carried increases as the child grows older, and the container in which water is carried also varies similarly. When her mother is away, the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

young girl is responsible for seeing that the food already prepared is given to the male and younger female members of the family. Males are by tradition not allowed to dip their hands in the food pot, this being exclusively a woman's duty.

Apart from these strictly utilitarian activities, young girls slip off at intervals to play with their companions. It is during this period that male children part company with females and form their own separate play groups. Those who continue to play with girls to a later age are reproached. Although girls in the earlier phase of this age group do a considerable amount of domestic work, it is mainly of an introductory nature. Thus the mother cannot go away for a night and leave the young girl in charge. The errands given to her are simple and in accordance with her capabilities.

A later phase—ten to eleven. Again this is not an age of independence in domestic work. The young girl's duties are still limited by her inexperience. But now the mother concentrates on making the girl do more thoroughly the few duties she has learned. Two of the more important of these activities are fetching firewood and water. The mother begins to expect her daughter to make several journeys daily to the stream and at least one trip to fetch firewood without being told. If the girl forgets, she may be reproached or beaten. At this time a start is also made in the preparation of adult food.

Discipline

The disciplinary training of girls of school-going age is theoretically a paternal as well as a maternal responsibility; but in practice the mother plays a much more important role than the father. It is against her mother that future blame for inefficiency in normal domestic duties will be directed. The young daughter is strictly

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 disciplined to prevent her from escaping the much
593 cherished traditional education. Discipline is weakened, however, when the nurse is not the daughter of the woman engaging her. In these circumstances the mistress, fearing to lose the nurse's services, tolerates behaviour she would not countenance in her own daughter.

868 In the process of training, the young girl is expected to be competent in household duties as early as possible. Mothers have frequently told me that girls who begin practising household duties later than the school-going age, are generally very inefficient in domestic work; thus in their early discipline mothers protect themselves against future blame for poor training.

Apart from the primary motive of training the young girl as a prospective wife, the mother is influenced by her desire to make her daughter of practical use to herself as soon as possible. The help from girls of school-
[594] going age greatly relieves the constant pressure of a woman's household tasks. This training also makes a girl observe feeding manners more strictly.

861 In Luo families, a young girl is at the mercy of every-
593 one except her younger brothers and sisters. When disobedient she is whipped with a stick. She thus becomes equally tyrannical towards her juniors when they disobey her. One girl told me that if her sister disobeyed her she seized the child, knocked her down, and beat her. This reflects the general attitude.

●857 *Nursing.* Although some girls of this later age act as nurses, nursing proper is more characteristic of the earlier stage. When she nears the age of eleven, the young girl rebels against nursing and runs back to her home or, if nursing her own brothers and sisters, escapes to relatives out of reach of her immediate family. This
[856] break takes place as soon as the breasts begin to develop and is perhaps a revolutionary step caused by the grow-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 ing interest in her body and in the opposite sex. It may
856 be said that the loss of concern for her charge and concentration on herself is a sign announcing the emotional disturbances of adolescence. Young girls of this age now

854
291

NURSE: AYOMA

857 consider nursing beneath their dignity, and their revolt
856 is encouraged by increasing association with members of the opposite sex who would disdain talking to a child-nurse.

855 *Feeding.* The girls of this age group eat normal adult
264 food, at the same time as adults, but the younger members of the group occasionally have a little food kept for them by their mothers. The consideration shown them as children depends on whether there are others younger

1 [i.e. From six to eleven years old - Analyst.]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 252 861

success given. In this atmosphere the girl slowly learns to master the art. It is not until she is thoroughly competent that she is allowed to prepare food for visitors.

593 855

Relationship with older children in the family. At first the young girl grows up in fear of and with a submissive attitude towards her older brothers and sisters, the attitude of fear decreasing towards her sisters as she begins more and more to share the same activities. Thus by the time the girls reach adolescence there is a growing feeling of companionship which brings them closer to each other in their everyday tasks, and any dominating attitude becomes consequently weaker. But among boys this attitude persists into adulthood, weakening only with the independence which adult life brings with it. Bullying is less noticeable among girls; boys of the school-going age become very tyrannical with their younger brothers and sisters, and their behaviour leads to frequent squabbles. [857]

The attitude of a girl towards her older brothers and sisters is influenced by the treatment she receives from them. She can be sent on an errand by any older member of the family. Thus an elder child often passes orders on to her juniors since the errands in a large family are many and frequent. In this way the young girl learns to avoid and perhaps to dislike certain members of the family. As she grows older, she in turn exercises disciplinary action over those beneath her.

Parental attitude. The father plays a rather detached role, but in actual fact he retains a deep-seated interest in his growing daughter as a future promise of wealth. Though fundamentally mothers are equally interested in sons and daughters, they have at this time a more direct influence over their girls. A mother is interested in her daughter partly through her maternal responsibility and partly because of the girl's immediate value to the family, the father being more definitely concerned

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

593 with the male children. Maternal control over the
855 young girl is very great and remains about the same when she reaches adolescence, though at this time the father's control becomes increasingly essential in keeping the growing personalities of the family in order.

YOUNG GIRLS GOING TO FETCH WATER

857 THE BEGINNING OF SPECIALISED ACTIVITIES

868 The school-going age marks the period when male and female children part company. Young girls become increasingly occupied with domestic work, such as fetching water and firewood, tending babies and watching the fire, while male children of the same age continue to play in groups for a much longer period. Apart from herding, which is now less general than in the past, boys of school-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

going age have little to do beyond playing in gangs. It is thus very common to come across gangs of male children engaged in social games. Because girls are occupied with their household duties it is much easier for boys of this age to go to school, causing less family disruption.

With her time for play diminishing, the young girl struggles between work given by her mother and the powerful attraction of the play groups from which her domestic duties tend to exclude her. Therefore if she is to discharge her traditional task of education, a mother must labour to keep her daughter from associating with these groups.

The girls' early training enables them to take on family duties at which boys of the same age would fail, for in their training for responsibility the girls of this age[1] are far in advance of their male counterpart. But the limited time in which the training must be completed has the effect of overloading a girl's school-going period.

The play groups. The activities carried on by girls from six to eleven years old are a continuation of those of the previous age group from two to five, but the play becomes more mature and better organized. The older girl assumes the role of organizer of the play activities of her younger sisters. Thus the activities become more complex and besides those involving the imitation of grinding corn, other articles of food appear such as meat, fish, and leaves to represent vegetables.

During my observations I noticed a tendency amongst young girls at play to give female names to their dolls, which probably indicates that they identify the dolls with themselves. Thus, when I suggested male names for the dolls, they were rejected. In assuming the role of the doll's mother it again seems clear that the girl identifies herself with her own mother.

Girls may also be found playing the part of a mother

[1] [i.e. From six to eleven years old.—ANALYST]

(*c*) Pattern for the bottom of a basket

857 both at and after birth, the younger being instructed and guided by the older ones. Boys of about five are usually found in the play groups of the school-going age, but as they grow older they are drawn away to male play groups.

The groups themselves vary in size from two members upwards, though occasionally a girl of this age may

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

be found playing alone. Weaving becomes more popular between these ages, and before the advent of thread this was done by means of grass stalks which were woven into several patterns.

These patterns are still woven sometimes at home and sometimes at play, but although they have not totally disappeared they are no longer much in evidence. Male children are sometimes taught to weave patterns by the girls. At present odd threads gathered from old socks or rags are used while stalks of grass serve as needles.

Age-group friendship. The age-group friendship which characterizes so much of a girl's pre-marital life first makes its appearance during the school-going age. But at this time it is friendship in the simplest sense and is more like a coming-together brought about by common interests. The main feature of the relationship is visiting, combined with moderate entertainment. After taking food the young guests join in the play activities of the friends they visit. The parents also take an interest and put up with the financial burden involved. But the friendship established is essentially external in that it is established between neighbouring girls of two lineages.* Girls visit their friends in groups, and the relationship grows weaker as the girls grow up. It appeared to me that this friendship is strongest just before the advent of their association with males on a sex basis.

As their interest in boys increases, the young girls' natural desire for friendship is fulfilled. Friendships with other girls are very much weakened by marriage and

*Lineages. The term lineages refers to enlarged families with one common ancestor or founder. These may live side by side with the other related lineages. With the common ancestor and the branching family groups, the lineage structure appears as a 'Root System'. As a result of fights between the various lineages in the past, some have been widely dispersed and may be found living among other groups not related to them. Frequent migrations have also tended to complicate the structure.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 572 [613] sometimes break up at the slightest provocation or misunderstanding. The lineal character of the friendship is facilitated by the social groupings of the people into lineages living side by side. This character is also assumed by the play groups which begin from the immediate family circle and widen to include other members of the lineage to which the children belong. Although there also exists a considerable degree of friendship among male children it does not seem to be organized as closely as that among the girls. Though I saw frequent examples of individual boyhood friendship I did not come across such a highly-developed arrangement.

The Cultural Pattern

857 858 Girls are born to a ready-made pattern of life and they are forced to follow this pattern from earliest childhood. The school-age period is the one in which girls are especially trained to fit into the culture to which [177] they have been born. A woman's life therefore tends to show great conservatism even where civilizing influences have considerably penetrated. This conservatism is maintained through all the early training of the children and domestic activities are still carried on in almost the same traditional way.

In contrast, we find that male children between these ages have a greater degree of freedom. I noticed a larger variety of playthings among boys than among girls of the same school-going age. Day after day the girls repeated imitations of the maternal activities. It was also much more difficult to discover where a group of boys had been playing than to find the favourite playgrounds of the female children. This was perhaps due to the difference in their freedom of movement. The occupations of the girls keep them largely at home while the boys range over a much greater area.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

The sexual life of girls at school-going age. While the sexual interest shown by girls of school-going age is not as pronounced as in the succeeding age group, there is a period of transition among the older members who sometimes begin to take great interest in romantic aspirations. The older girls when talking to their men friends often tolerate the presence of younger girls, and although they are not always accompanied by them their attitude towards younger girls is not hostile as in the case of older boys and their juniors. Hence it is common to find among adolescent girls a number of the school-going age. Girls nearing adolescence usually have a great desire to see the breasts come. These are therefore constantly touched and stimulated.

The horizon of sexual relationship — six to eleven. Although this age group marks the period of separation for the sexes so far as play goes, it is also a time when the older members of the groups of both sexes begin to take a specific interest in one another. The interest probably begins when the children in their imaginative play imitate the marital relationship which exists between adults. This starts with the imitation of a married couple, then proceeds to the imitation of the act of bearing a child. Both sexes take part in this.

But apart from these imitative games, a great curiosity is displayed in the examination of external reproductive organs. Among certain children we find that something approaching a crude sexual intercourse takes place when older members of the family are absent. During the period when the crops are ripening these older children, sometimes accompanied by younger ones who act as sentries, disappear into the cornfields to carry out this practice.

When this stage of development is made known by the younger children, who perhaps from sheer interest

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

the older girls among whom the younger girls sleep. Male visitors from the homes of women in adjoining homesteads also provide an opportunity for learning the coquetry and customs of the more mature girls. Although girls of school-going age are inexperienced, they are not despised on these occasions, though the necessity of keeping order in the room forces the older girls to keep an eye on the younger girls to discourage unnecessary laughter.

The family and the school. Modern school education acts as a break in the continuity of education for domestic purposes. The school demands regular attendance, whereas the mother requires the labour of her daughter. For the young girl, the school provides a relief from hard and tedious work for the family, and from her mother's supervision. It also provides an unrestricted field of association with other girls, whereas at home she would rarely have time to see her girl friends. Thus the school gives a very different environment. There is a general tendency to become lazy among schoolgirls passing into adolescence.

The school forces parents to sacrifice themselves; hence there is no great keenness among mothers with regard to their daughters' education. The majority of them ignore it or are actively against it. In most quarters the desired knowledge for girls is limited to reading and writing. Beyond this, women have not been able to appreciate education for girls, and they often delay their daughters' entrance into schools. Thus in the lower Primary stages most of the girls are slightly older than the boys.

Education for girls is also distrusted because at present mothers feel that after it their daughters would not fit into the pattern of life into which they were born. There is also a feeling that the traditional education at home would suffer.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

IV

ADOLESCENCE

857 593 In the interim period between childhood and adolescence there comes a time when a girl's ability to deal with domestic work is more advanced than her physical and mental development. It is during this period that the mother, still occupying a central position as adviser and supervisor of the girl's work, finds difficulty in the management of her daughter. Since the domestic work of her household is heavy, the mother uses all kinds of pressure to induce her daughter to do as much as she can.

856 [572] The girl's life at this time is characterized by her increased interest in boys and desire to come into contact with them. The friendships established during childhood with other young girls are weakened by the development of a new object of friendship in the opposite sex. During this time the breasts of most girls develop noticeably. The girls show great interest in this development and employ various means to stimulate it. An instance of this interest can sometimes be seen among those who stuff clothes in their bosoms to exaggerate the size.

On the whole, the period differs only in the fact that the girls definitely aspire to be grown-ups and are also more interested in friendship with boys.

Characteristics of Adolescence

883 This new period is the time when the mother leaves her daughter to bring her knowledge of domestic work to perfection by her own efforts. As compared with the school-going age, there is little or no interference from

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

the herds and, by emulation of the age group next above them, slowly acquiring proficiency in the typical adult male pursuits, while the girls are drawn into the domestic tasks of the elementary family, food preparation and cooking, fetching water, and minding babies.

The young boys of a play group sleep together in the goat hut of a homestead when they no longer share their mother's hut at night. The girls sleep together in the hut of some widow of the group who is past childbearing age. This is the most important institution for the transmission of female culture. Girls only leave it at marriage, and till that time they are continuously trained in the adult roles expected of them. Boys at puberty build themselves bachelor huts (Dholuo *simbi*) in which they sleep and where they also entertain their girl friends. A group of young men makes a formal assignation with a group of nubile girls from a segment of another maximal lineage into which marriage is possible, and visits and entertainments are held to and from the one lineage territory to the other. The two groups pair off with one another into sex partnerships which last till the groups break up and reform. A youth graduates out of this company of *simbi* age-mates at marriage.

Authority over children rests jointly with the parents. That of the mother is likely to be the most effective in the early years, and she always holds a strong sanction in her manipulation and control of the food-supply. The father is ultimately responsible for the order of the family, and his discipline is stronger than the mother's as the children grow older. There is a relation of friendly intimacy between alternate generations. Children are on easy terms with their grandparents and will certainly use the latters' households as an escape from home discipline or as a more generous source of food if need or opportunity arises. Children are at no period encouraged to live away from home with other relatives, but parents allow them to circulate freely among a number of homesteads wherever they find the best welcome and the most plentiful food, among families which are usually both neighbours and close agnatic relatives. Brother and sister have no material reasons for conflict and there is a strong and lasting bond of affection and reliance between them, institutionalized in the symbolism of a number of ritual occasions, and linked to their important later relation to one another's children as mother's brother (*awa*) and father's sister (*awya*). Apart from parents, these are the only two consanguine relatives of the first ascending generation who are picked out by special kinship terms. The newly married woman is under the authority of her mother-in-law, and a man's relation to his wife's parents is marked by deep respect and avoidances. Ritual practices as well as personal attitudes emphasize the importance of fertility and virility,[1] and the value attached by a man to a numerous offspring and the ability of his wives to provide it. The Luo are aware of the male and female parts in procreation, but say that 'the woman's blood goes for nothing'. This seems a necessary inference from the nature of lineage organization rather than vice versa, for they would not argue that there is any tendency for children to resemble the father rather than the mother, nor do they permit marriage with close consanguine kin though of an unrelated lineage. It is

[1] e.g. the special rites which have to be carried out for a nubile girl dying unmarried, a wife dying without children, a widow dying before remarriage, a man dying when one of his wives is still childless, or a man dying before he has experienced sexual intercourse, the latter being treated similarly to a barren woman.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 and is an imitation taking place even among children
868 who do not see grinding stones in use. It is therefore like a vanishing feature of a culture surviving in the form of children's play activity. Leaves of plants or trees are put into a broken piece of pot (*balatago*) with a little water to represent either meat, fish or green vegetables in the process of being cooked. Small dried branches may be used to represent the fire, but actual fire is not used at this early stage. These are mainly make-believe activities in which the children persuade themselves that they are doing real things.

In the rather advanced activities the younger act as servants to the older children, who send them here and there to fetch the necessary articles and also instruct them to keep the supposed fire burning. Between the ages of six and nine, female children, as I have already mentioned, use real things in imitating the preparation of food. Thus, during the mother's absence nurses and other older children may take corn or flour, water and salt, to be made into porridge (kuon). They may also tear off a portion of fish or meat to be cooked in the play huts, which are generally constructed in some hidden place behind the village. Nevertheless, the vessels used are still merely broken pieces of pottery.

The play shelters themselves are small enclosures made of leafy branches. Having used the huts for several days the children abandon them or set fire to them, and there are occasions when actual houses have
[861] [858] been set on fire during the absence of the grown-ups. If this happens, nothing is done to the children, for children are everywhere considered to be 'foolish' and capable of any mischief.

[524] Sometimes millet is boiled in old small tins or broken pots. On the whole, the method of cooking is extremely crude, nevertheless, it is significant in that it shows the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 sometimes break up at the slightest provocation or mis-
572 understanding. The lineal character of the friendship is
[613] facilitated by the social groupings of the people into lineages living side by side. This character is also assumed by the play groups which begin from the immediate family circle and widen to include other members of the lineage to which the children belong. Although there also exists a considerable degree of friendship among male children it does not seem to be organized as closely as that among the girls. Though I saw frequent examples of individual boyhood friendship I did not come across such a highly-developed arrangement.

The Cultural Pattern

857 Girls are born to a ready-made pattern of life and
858 they are forced to follow this pattern from earliest childhood. The school-age period is the one in which girls are especially trained to fit into the culture to which
[177] they have been born. A woman's life therefore tends to show great conservatism even where civilizing influences have considerably penetrated. This conservatism is maintained through all the early training of the children and domestic activities are still carried on in almost the same traditional way.

In contrast, we find that male children between these ages have a greater degree of freedom. I noticed a larger variety of playthings among boys than among girls of the same school-going age. Day after day the girls repeated imitations of the maternal activities. It was also much more difficult to discover where a group of boys had been playing than to find the favourite playgrounds of the female children. This was perhaps due to the difference in their freedom of movement. The occupations of the girls keep them largely at home while the boys range over a much greater area.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

512 462 264 [853] [356] *Daily rhythm of family duties.* The daily programme of a mother with a young child is divided into two major phases, corresponding with the morning and the evening meals. In the morning the activities include the preparation of gruel for the child, preceded by suckling it and sweeping the house. When prepared, the gruel is left with a nurse, to be given to the child when it cries. The mother then goes to the field or to any major work of the day. Preparation of the morning meal begins at about 9 a.m., and by 10 a.m. the family disperses again, the men perhaps to herd cattle or to go to market, and the women to fetch firewood or bring water from the river.

[178] The idea of having a meal freshly prepared in the morning is of recent origin. In the past, people ate cold food preserved from the previous evening meal. A great proportion of what is eaten during the week comes from the gardens.

[178] In former days, women were expected to prepare an afternoon gruel for their husbands at about 3 p.m. This is still the custom in some families, but modern women are quite ignorant of the practice in its traditional form.

• 858 613 *The social attitude towards male and female children.* The difference in the social attitude towards male and female children arises from considering them in relation to the future of the lineage to which they belong. A male child is looked upon as a dynamic element in the lineal structure. On the other hand, a female child, though a potential source of wealth, is regarded as an exporter of fertility from her parents' lineage to the lineage of her husband. Thus, if she becomes the mother [842] of many children, her larger numbers are looked upon [593] with disfavour as taking something away from her original family. This results in a superstitious feeling which affects her visits to the parental home.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

Although a larger number of males would normally be preferred, a family of exclusively male children is regarded as a disadvantage because of the economic burden incurred when the sons want to marry. But when a father has only female children, his position is considered as 'dead', for a family is only considered as living when there are male members to perpetuate the line.

858
842

The Social Environment

Lineage. Social relationship among the Luo is determined by the strict manner in which their society is organized. Since the social structure follows a system of lineage (*dhoudi*, pl., *dhoot*, sing.), the exogamous limits or the limits within which intermarriage may not take place, depend on the relationship between these lineages. When relationships are close, the lineages unite through their dead originators until a common ancestor is reached. The lineages continue to grow, thus stretching the distance of relationship further and further. The breaking of the rule against intermarriage depends on the attitude of the living members of the lineages and the distance between them and their ancestors.

613
582

In addition to the regulation of matrimonial relationships, the structure of the society also determines ritual observances and funeral ceremonies among the Luo, while the relationship between the different lineages is characterized by competition, which is often a feature of polygamous homes.

613
595

Family relationships. The difference between monogamous and polygamous homes is found not only in the status of the women, but also in the psychological attitude towards the parents resulting from the husband and wife relationship. Although it is generally assumed that the focus of family life is the father, the degree of

595
594

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

the herds and, by emulation of the age group next above them, slowly acquiring proficiency in the typical adult male pursuits, while the girls are drawn into the domestic tasks of the elementary family, food preparation and cooking, fetching water, and minding babies.

The young boys of a play group sleep together in the goat hut of a homestead when they no longer share their mother's hut at night. The girls sleep together in the hut of some widow of the group who is past childbearing age. This is the most important institution for the transmission of female culture. Girls only leave it at marriage, and till that time they are continuously trained in the adult roles expected of them. Boys at puberty build themselves bachelor huts (Dholuo *simba*) in which they sleep and where they also entertain their girl friends. A group of young men makes a formal assignation with a group of nubile girls from a segment of another maximal lineage into which marriage is possible, and visits and entertainments are held to and from the one lineage territory to the other. The two groups pair off with one another into sex partnerships which last till the groups break up and reform. A youth graduates out of this company of *simba* age-mates at marriage.

Authority over children rests jointly with the parents. That of the mother is likely to be the most effective in the early years, and she always holds a strong sanction in her manipulation and control of the food-supply. The father is ultimately responsible for the order of the family, and his discipline is stronger than the mother's as the children grow older. There is a relation of friendly intimacy between alternate generations. Children are on easy terms with their grandparents and will certainly use the latters' households as an escape from home discipline or as a more generous source of food if need or opportunity arises. Children are at no period encouraged to live away from home with other relatives, but parents allow them to circulate freely among a number of homesteads wherever they find the best welcome and the most plentiful food, among families which are usually both neighbours and close agnatic relatives. Brother and sister have no material reasons for conflict and there is a strong and lasting bond of affection and reliance between them, institutionalized in the symbolism of a number of ritual occasions, and linked to their important later relation to one another's children as mother's brother (*nera*) and father's sister (*waya*). Apart from parents, these are the only two consanguine relatives of the first ascending generation who are picked out by special kinship terms. The newly married woman is under the authority of her mother-in-law, and a man's relation to his wife's parents is marked by deep respect and avoidances. Ritual practices as well as personal attitudes emphasize the importance of fertility and virility,[1] and the value attached by a man to a numerous offspring and the ability of his wives to provide it. The Luo are aware of the male and female parts in procreation, but say that 'the woman's blood goes for nothing'. This seems a necessary inference from the nature of lineage organization rather than vice versa, for they would not argue that there is any tendency for children to resemble the father rather than the mother, nor do they permit marriage with close consanguine kin though of an unrelated lineage. It is

[1] e.g. the special rites which have to be carried out for a nubile girl dying unmarried, a wife dying without children, a widow dying before remarriage, a man dying when one of his wives is still childless, or a man dying before he has experienced sexual intercourse, the latter being treated similarly to a barren woman.

ignorant of the previous night's events, notified the police. Thus the story was out.

The Joluo were concerned that the youth should have been arrested and charged with murder. He was acquitted after trial on the grounds of self-defense, but the opinion remained that he should have had praise and not have suffered the indignity of being held in custody which, to the unsophisticated, was punishment and prison.

The Joluo discipline wives and children, when it is thought necessary, by beating and kicking. One or two cases each year come to the courts as a result of excessive force resulting in the death of a victim of discipline. Out of 46 cases between 1949 and 1954, 10 were of this type.

The largest number of murder cases today arises from drunken quarrels during beer parties. Native beer does not have a high alcoholic content, but a beer-drink often begins at mid-morning and continues well into the night and, on special occasions, until the next day. The quantity consumed therefore frequently produces an acute state of drunkenness. Of the 46 cases, no fewer than 12 can be classified as the result of excessive beer drinking. These cases, without exception, were finally treated by the courts as manslaughter.

Family quarrels, often over bride-wealth payments, account for a few cases every year. A typical case of this type is as follows.

Case No. 3.

In 1949, the Accused caught his wife in the act of adultery with an acquaintance. The wife returned to her father's village, as is the custom in such cases, and made several efforts to elope with her lover. On each occasion, her brothers forcefully restrained her and threatened her lover with a severe beating or death, should he attempt to elope with their sister. After several weeks of argument and numerous meetings of the eld-

856 not begin to speak until after two years, when they are
868 barely able to construct short simple sentences.

Discipline

•861 Formal training in discipline begins as early as the
855 seventh month, at the time when the child may put some dirty object to its lips. Thus a mother, finding her child with soil in its mouth, may slap it gently as she removes the soil, or the hands of the child may be tapped with anything convenient. A child crawling towards the fire would be immediately pulled away, and sometimes it might be frightened with the glowing end of a burning twig in order to impress the danger upon its mind.

856 It is never certain when a child is first going to walk,
164 for the conditions under which children are brought up are such that it is impossible for them to escape being seriously ill at one time or another. Hence the period is largely determined by the health of the child. The average time ranges from eleven to fourteen months. A child who develops very rapidly through the early stages causes its parents much worry, for it is believed that a fast-growing child never survives.

855 *Effects of the child's emotions.* The mother's attitude to-
[844] wards the emotions of the child is based on the deep impression left on her mind by the strain of the birth. Thus, I have come across women who told me quite convincingly that whenever they heard one of their children cry out vigorously they again felt the pain they had experienced during its birth. A mother tolerates the emotional outbursts of her child not only because she loves it but even more because she struggled to bear it. This seems to be the real cause of the so-called humanity of women towards children in contrast with the indifference sometimes shown by men. Instead of setting the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 and is an imitation taking place even among children
868 who do not see grinding stones in use. It is therefore like a vanishing feature of a culture surviving in the form of children's play activity. Leaves of plants or trees are put into a broken piece of pot (*balatago*) with a little water to represent either meat, fish or green vegetables in the process of being cooked. Small dried branches may be used to represent the fire, but actual fire is not used at this early stage. These are mainly make-believe activities in which the children persuade themselves that they are doing real things.

In the rather advanced activities the younger act as servants to the older children, who send them here and there to fetch the necessary articles and also instruct them to keep the supposed fire burning. Between the ages of six and nine, female children, as I have already mentioned, use real things in imitating the preparation of food. Thus, during the mother's absence nurses and other older children may take corn or flour, water and salt, to be made into porridge (kuon). They may also tear off a portion of fish or meat to be cooked in the play huts, which are generally constructed in some hidden place behind the village. Nevertheless, the vessels used are still merely broken pieces of pottery.

The play shelters themselves are small enclosures made of leafy branches. Having used the huts for several days the children abandon them or set fire to them, and there are occasions when actual houses have
[861 been set on fire during the absence of the grown-ups. If
858] this happens, nothing is done to the children, for children are everywhere considered to be 'foolish' and capable of any mischief.

[524] Sometimes millet is boiled in old small tins or broken pots. On the whole, the method of cooking is extremely crude, nevertheless, it is significant in that it shows the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

young girl is responsible for seeing that the food already prepared is given to the male and younger female members of the family. Males are by tradition not allowed to dip their hands in the food pot, this being exclusively a woman's duty.

Apart from these strictly utilitarian activities, young girls slip off at intervals to play with their companions. It is during this period that male children part company with females and form their own separate play groups. Those who continue to play with girls to a later age are reproached. Although girls in the earlier phase of this age group do a considerable amount of domestic work, it is mainly of an introductory nature. Thus the mother cannot go away for a night and leave the young girl in charge. The errands given to her are simple and in accordance with her capabilities.

A later phase—ten to eleven. Again this is not an age of independence in domestic work. The young girl's duties are still limited by her inexperience. But now the mother concentrates on making the girl do more thoroughly the few duties she has learned. Two of the more important of these activities are fetching firewood and water. The mother begins to expect her daughter to make several journeys daily to the stream and at least one trip to fetch firewood without being told. If the girl forgets, she may be reproached or beaten. At this time a start is also made in the preparation of adult food.

Discipline

The disciplinary training of girls of school-going age is theoretically a paternal as well as a maternal responsibility; but in practice the mother plays a much more important role than the father. It is against her mother that future blame for inefficiency in normal domestic duties will be directed. The young daughter is strictly

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 disciplined to prevent her from escaping the much
593 cherished traditional education. Discipline is weakened, however, when the nurse is not the daughter of the woman engaging her. In these circumstances the mistress, fearing to lose the nurse's services, tolerates behaviour she would not countenance in her own daughter.

868 In the process of training, the young girl is expected to be competent in household duties as early as possible. Mothers have frequently told me that girls who begin practising household duties later than the school-going age, are generally very inefficient in domestic work; thus in their early discipline mothers protect themselves against future blame for poor training.

Apart from the primary motive of training the young girl as a prospective wife, the mother is influenced by her desire to make her daughter of practical use to her-
[594] self as soon as possible. The help from girls of school-going age greatly relieves the constant pressure of a woman's household tasks. This training also makes a girl observe feeding manners more strictly.

• 861 In Luo families, a young girl is at the mercy of every-
593 one except her younger brothers and sisters. When disobedient she is whipped with a stick. She thus becomes equally tyrannical towards her juniors when they disobey her. One girl told me that if her sister disobeyed her she seized the child, knocked her down, and beat her. This reflects the general attitude.

857 *Nursing*. Although some girls of this later age act as nurses, nursing proper is more characteristic of the earlier stage. When she nears the age of eleven, the young girl rebels against nursing and runs back to her home or, if nursing her own brothers and sisters, escapes to relatives out of reach of her immediate family. This
[856] break takes place as soon as the breasts begin to develop and is perhaps a revolutionary step caused by the grow-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

855 264 than themselves. As the girls grow older, feeding at odd times is restricted. The girls eat with the mother while their brothers eat with the father. The mother of the family takes particular care that the brothers get some food and even though she may go without herself, she sees that the children eat.

868 *Female education at school-going age.* The traditional education as given by the parents is strictly utilitarian. Its main aim is to prepare the girl for her future as a wife in a family and as a mother of children.

868 312 The girls accompany their mothers or older associates to fetch water, the younger ones being given a very little water in a small pot, usually used for milking. Larger pots are given to the girl as she grows older and stronger, the girls of six and seven being eager to imitate their older playmates. A few of the male children like to go to fetch water with similar containers, but their mothers do not encourage them. The mother of a young girl watches her carefully to see if she is interested in imitating these activities before giving any encouragement.

868 [241] [252] When the girl, at the age of eight or nine, expresses a desire to dig, the mother takes her to a garden early in the morning to let her do so, and releases her at about eight o'clock before the sun becomes too hot. At this time too, if a grinding stone is available, the mother teaches her child to grind corn, this being a continuation of the interest in grinding soil shown at play. The older girls of the group are instructed in giving gruel to the young children they nurse.

868 252 861 In the preparation of food, the girls first learn how to prepare gruel for the babies. But proper cooking comes very gradually and they learn it under the constant observation of the adult members of the family. The food cooked is first tasted by the parents only, when criticisms are openly made and encouragement of future

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 252 861

success given. In this atmosphere the girl slowly learns to master the art. It is not until she is thoroughly competent that she is allowed to prepare food for visitors.

593 855

Relationship with older children in the family. At first the young girl grows up in fear of and with a submissive attitude towards her older brothers and sisters, the attitude of fear decreasing towards her sisters as she begins more and more to share the same activities. Thus by the time the girls reach adolescence there is a growing feeling of companionship which brings them closer to each other in their everyday tasks, and any dominating attitude becomes consequently weaker. But among boys this attitude persists into adulthood, weakening only with the independence which adult life brings with it. Bullying [857] is less noticeable among girls; boys of the school-going age become very tyrannical with their younger brothers and sisters, and their behaviour leads to frequent squabbles.

The attitude of a girl towards her older brothers and sisters is influenced by the treatment she receives from them. She can be sent on an errand by any older member of the family. Thus an elder child often passes orders on to her juniors since the errands in a large family are many and frequent. In this way the young girl learns to avoid and perhaps to dislike certain members of the family. As she grows older, she in turn exercises disciplinary action over those beneath her.

Parental attitude. The father plays a rather detached role, but in actual fact he retains a deep-seated interest in his growing daughter as a future promise of wealth. Though fundamentally mothers are equally interested in sons and daughters, they have at this time a more direct influence over their girls. A mother is interested in her daughter partly through her maternal responsibility and partly because of the girl's immediate value to the family, the father being more definitely concerned

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

this place they make regular visits to it. Thus the place used by the children for this purpose appears very insanitary. Furthermore, children are in this way exposed to the danger of attack from worms of various kinds. 863

Weaning

There are very few cases where children are not weaned against their will. The maximum period of suckling is determined by the date of the following pregnancy. Thus if the mother is not again pregnant a child is suckled for as long as it wishes. It is considered that once a mother is expecting another child the milk in her breasts naturally belongs to the coming baby and would be poisonous to the older child. It is also believed that children who are suckled when their mothers are pregnant waste away and eventually die if the feeding is not stopped. 862

Methods of weaning. Methods of weaning do not vary much between different mothers. First, the child may be persuaded that the milk is 'pus', and as such should not be taken. Certain children are deliberately disgusted and are weaned immediately in this way.

The second method involves smearing with the bitter aloe sap, or a substance which irritates the mouth, like pepper. Much pain is inflicted on children weaned in this manner, and no doubt psychological studies of these children would bring to light the tremendous effects created by different methods of weaning. [824]

Another method used is that of discouragement through fright. A mother may play on the sensory nerves of the child's face at night by touching it with grass, telling the nursing child that the grass is a caterpillar. As children are afraid of caterpillars this greatly upsets them, and the mother succeeds in severing the last physiological connection between herself and her [825]

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

862 child. Having in the beginning created the child's liking for her breasts she must resort to crude methods to shift the child's interest to other sources. Hence weaning is not only a break in the time-honoured connection between mother and child, but also a significant psychological factor in the child's development. A closer analytical study of children would help to show how far the fears established during infancy influence their later emotional life.

Parent-child Relationship

855 593 The relationship between parents and children from the age of two to six is principally determined by two factors: discipline and the provision of food. Parents feel that children of both sexes tend to prefer their mother partly because of her frequent contact with them, and even more because their food in its ready form is under her control.

In feeding children a mother's sympathies often prevent her from restricting their food, but the reverse situation may exist and sometimes we find a father who loves his child so much that he will give it all the food it desires. If the father is more severe than the mother in this respect the child naturally prefers the mother, and, similarly, a child will prefer a father who feeds it to a mother who restricts its food.

855 593 603 A further complication arises when the grandparents come into the matter. So delicately balanced is this relationship depending on food and discipline that the slightest difference is sufficient to draw the child towards those who favour it. This means that if the grandparents offer it better conditions, the child will stay with them most of the time. Hence, when I was once talking to a couple I know, I was informed that their daughter would not remain with them but preferred her grand-

FL11 Luo FL11

857 524 repeated until all the fallen stones have been collected, when it is considered that the game is won. The rules are, however, more complicated than this brief sketch has made them appear.

Discipline

857 865 During the period between two and six years, the children have a tendency to play with their friends until late in the evening. The playground may be quite removed from the house; hence parents often have to take strict action to keep their children within the bounds of their homesteads. When they are disobedient, the [864] normal disciplinary action is whipping. At this age female children are instructed to sit with their knees together. If one of them sits carelessly she is either warned or whipped. Among her duties are the fetching of firewood or dishes for food, and if she refuses to fetch firewood for anyone in the village she may be whipped. [868] She cannot, of course, be asked to bring fire from a neighbouring home, or to light it, because she lacks the experience necessary for this task. Crying without a cause is sternly repressed and if it is persisted in it earns the child a whipping.

855 863 *Training in decency.* Luo children from two years upwards are greatly neglected so far as clothes, washing, and training in decency are concerned. Hence the general appearance of these children is that of dirty little creatures whose clothes are stained with the soil in which they play. Some mothers admit that they fail to wash their children for as long as three days. Other mothers do not worry at all, assuming that their children will go with the older children to wash themselves.

863 Children old enough to walk about are strictly instructed not to empty their bowels inside the home but in front of the house beyond the enclosure. Once shown

The sexual life of girls at school-going age. While the sexual interest shown by girls of school-going age is not as pronounced as in the succeeding age group, there is a period of transition among the older members who sometimes begin to take great interest in romantic aspirations. The older girls when talking to their men friends often tolerate the presence of younger girls, and although they are not always accompanied by them their attitude towards younger girls is not hostile as in the case of older boys and their juniors. Hence it is common to find among adolescent girls a number of the school-going age. Girls nearing adolescence usually have a great desire to see the breasts come. These are therefore constantly touched and stimulated.

The horizon of sexual relationship — six to eleven. Although this age group marks the period of separation for the sexes so far as play goes, it is also a time when the older members of the groups of both sexes begin to take a specific interest in one another. The interest probably begins when the children in their imaginative play imitate the marital relationship which exists between adults. This starts with the imitation of a married couple, then proceeds to the imitation of the act of bearing a child. Both sexes take part in this.

But apart from these imitative games, a great curiosity is displayed in the examination of external reproductive organs. Among certain children we find that something approaching a crude sexual intercourse takes place when older members of the family are absent. During the period when the crops are ripening these older children, sometimes accompanied by younger ones who act as sentries, disappear into the cornfields to carry out this practice.

When this stage of development is made known by the younger children, who perhaps from sheer interest

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

864 report to the parents what they have seen, the reaction of the grown-ups is to reproach the children and restrict them from playing with members of the opposite sex. But it is only occasionally that such cases are reported. As a rule, children have such experiences when they are well out of reach. On the whole, the practice is not taken very seriously.

864 867 The child first experiences the restrictions of exogamy when she is stopped from having sexual interest in any other child in her family. For instance, she is reproached when found playing with her cousins. Her growing interest in sex then extends itself to others outside the family. Through the orders of her adult relatives the child is forced to agree to have no sexual relationship with those related to her. These restrictions imposed on the younger generation follow the lineal structure, and it is the duty of the adult members of the community to tell the child the social code regarding sexual relationships. Up to the age of eleven the child accepts restrictions as a matter of course, her ideas of kinship being immature.

867 The child's knowledge of the boundaries of exogamy is uncertain till adolescence, when it takes its final form. Before that, its knowledge is arrived at by two processes: first, the child hears of some boys from a particular lineage and gets in touch with them; next the adult members of the community become aware of the existing relationship and set about to discourage it. The process is repeated elsewhere with the same result, a full knowledge of the boundaries of exogamy coming only with maturity. That it happens by this method of trial and error is clear from instances of marriage proposals being turned down between men and women who are related.

864 A great deal of knowledge about sex is acquired from

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

the older girls among whom the younger girls sleep. Male visitors from the homes of women in adjoining homesteads also provide an opportunity for learning the coquetry and customs of the more mature girls. Although girls of school-going age are inexperienced, they are not despised on these occasions, though the necessity of keeping order in the room forces the older girls to keep an eye on the younger girls to discourage unnecessary laughter.

The family and the school. Modern school education acts as a break in the continuity of education for domestic purposes. The school demands regular attendance, whereas the mother requires the labour of her daughter. *For the young girl, the school provides a relief from* hard and tedious work for the family, and from her mother's supervision. It also provides an unrestricted field of association with other girls, whereas at home she would rarely have time to see her girl friends. Thus the school gives a very different environment. There is a general tendency to become lazy among schoolgirls passing into adolescence.

The school forces parents to sacrifice themselves; hence there is no great keenness among mothers with regard to their daughters' education. The majority of them ignore it or are actively against it. In most quarters the desired knowledge for girls is limited to reading and writing. Beyond this, women have not been able to appreciate education for girls, and they often delay their daughters' entrance into schools. Thus in the lower Primary stages most of the girls are slightly older than the boys.

Education for girls is also distrusted because at present mothers feel that after it their daughters would not fit into the pattern of life into which they were born. There is also a feeling that the traditional education at home would suffer.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

883 On the whole, girls dislike those men whose chief object
●864 is sexual satisfaction. Their caution is often the result of
881 talks on the nature of sexual relationship which girls hold in their communal sleeping places, and with older women.

When newly-married women return to their maternal homes, they freely discuss among themselves—especially during sleeping hours—their experiences with their husbands. This affords an opportunity for the unmarried adolescent girl to obtain first-hand information on the nature of relationships in married life.

883 *Opportunities for contact.* The normal first meeting between girls and those with whom they may have sexual relations, takes place by conscious or deliberate arrangements made by the parties concerned, at marriage ceremonies or in public places like market centres or towns. They first make each other's acquaintance somewhere between the girl's and the man's house, particularly when the two live in close proximity. These are distinguished from any other meetings in that they are arranged between the male friends and the older adolescent girls or those on the threshold of adolescence.

The meetings which take place during marriage ceremonies are observed with great interest by girls of the nursing age, who watch the older girls' behaviour towards their men friends with keen curiosity. In many instances introductions are managed through the brothers of the girls. Introductions resulting in marriage
584 may also come about through a girl first acquainting
883 herself with sisters who introduce their brother to her. Brothers of adolescent girls would, like all members of the family, disapprove of a prolonged friendship without any sign of betrothal and would do all they could to persuade the girl to look for another friend.

881 *Sex education of adolescent girls.* Girls in the old tradi-

857 repeated until all the fallen stones have been collected,
524 when it is considered that the game is won. The rules are, however, more complicated than this brief sketch has made them appear.

Discipline

857 During the period between two and six years, the
865 children have a tendency to play with their friends until late in the evening. The playground may be quite removed from the house; hence parents often have to take strict action to keep their children within the bounds of their homesteads. When they are disobedient, the
[864] normal disciplinary action is whipping. At this age female children are instructed to sit with their knees together. If one of them sits carelessly she is either warned or whipped. Among her duties are the fetching of firewood or dishes for food, and if she refuses to fetch firewood for anyone in the village she may be whipped.
[868] She cannot, of course, be asked to bring fire from a neighbouring home, or to light it, because she lacks the experience necessary for this task. Crying without a cause is sternly repressed and if it is persisted in it earns the child a whipping.

855 *Training in decency.* Luo children from two years up-
863 wards are greatly neglected so far as clothes, washing, and training in decency are concerned. Hence the general appearance of these children is that of dirty little creatures whose clothes are stained with the soil in which they play. Some mothers admit that they fail to wash their children for as long as three days. Other mothers do not worry at all, assuming that their children will go with the older children to wash themselves.

863 Children old enough to walk about are strictly instructed not to empty their bowels inside the home but in front of the house beyond the enclosure. Once shown

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

going age have little to do beyond playing in gangs. It is thus very common to come across gangs of male children engaged in social games. Because girls are occupied with their household duties it is much easier for boys of this age to go to school, causing less family disruption.

With her time for play diminishing, the young girl struggles between work given by her mother and the powerful attraction of the play groups from which her domestic duties tend to exclude her. Therefore if she is to discharge her traditional task of education, a mother must labour to keep her daughter from associating with these groups.

The girls' early training enables them to take on family duties at which boys of the same age would fail, for in their training for responsibility the girls of this age are far in advance of their male counterpart. But the limited time in which the training must be completed has the effect of overloading a girl's school-going period.

The play groups. The activities carried on by girls from six to eleven years old are a continuation of those of the previous age group from two to five, but the play becomes more mature and better organized. The older girl assumes the role of organizer of the play activities of her younger sisters. Thus the activities become more complex and besides those involving the imitation of grinding corn, other articles of food appear such as meat, fish, and leaves to represent vegetables.

During my observations I noticed a tendency amongst young girls at play to give female names to their dolls, which probably indicates that they identify the dolls with themselves. Thus, when I suggested male names for the dolls, they were rejected. In assuming the role of the doll's mother it again seems clear that the girl identifies herself with her own mother.

Girls may also be found playing the part of a mother

[i.e. From six to eleven years old.—
ANALYST]

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

6. Liver and remaining ribs and offal: for all the women of the homestead.
7. Kidneys: for the woman's sisters still in their mother's house and their friends.
8. Customary portion for the eldest married daughter of the woman's mother.
9. Customary portions to be eaten, some raw, some cooked by *bulo*, by all the elders assembled for the distribution.

It is worth while to treat this one rite at length, because it is the prototype of so many others. Its especial significance is that it takes place at the lowest level of segmentary organization, that it is bound to occur in every family as often as a daughter is married off, and that it draws into a structured participation not merely lineage leaders and senior elders but every man, woman, and child in the family. When the Luo youngster of either sex begins to grasp why, on certain occasions, it receives a special supply of kidney or ribs to roast on the fire with its playmates, its education in the theory of lineage structure has begun. The same holds true for all the wives of the men who bring home their portions of meat to be cooked, and share them with favourite wives or children, or allow them the scraps.

There are many other occasions on which meat has to be ritually divided. In every case a similar procedure is followed, with the same articulation of lineage structure. There are the sacrifices previously mentioned, which are made to the ancestor indicated by the diviner as the cause of some misfortune. Sacrifice is also made usually within a year or so of the death of any elder of importance, and the level of lineage whose major segments are called to share in it depends upon the dead man's status. If he took part in the councils of the maximal lineage its major segments would certainly be called; if he was of less importance the major segments of a lineage at some lower level would be called. A further custom occasioning a demonstration of lineage segmentation is that whereby an elder of importance chooses a bull to be eaten after his death, the segments of his lineage dividing it among themselves according to principles similar to those of *riso*.

Besides sacrifices, every beer party, of whatever size and on whatever occasion, is also a display of lineage structure at one level or another. These parties are exceedingly frequent, and most frequent of all in the comparative leisure of the dry season, when there is a pause between the completed harvest and the next cultivation not yet begun. At this time few weeks will pass without a beer party somewhere in the vicinity, and often they follow on one another for days on end. In every one there is a core of elders who epitomize the structure of the lineage segments participating in the occasion. This is all quite apart from the small quantities of beer which old men like to drink with two or three neighbours independently of any ceremonial pretext. But all parties of any size have a ritual occasion, whether it be one of the innumerable occasions resulting from death which are strung out over a period of at least one and often two years, or in connexion with marriage, or for the settlement of the periodic and seasonal affairs of a class A lineage.

In the larger beer parties the pitchers of beer are distributed among lineage segments in the same way as are the joints of meat after a sacrifice. In all of them the order of drinking is strictly determined by lineage seniority, starting with the representatives of the major segments of the superordinate lineage, in the order of seniority of their eponymous ancestors, and downwards through the subordinate levels of the line particularly concerned. The level of major segments involved is always an index

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

The next step is for the child to be taught the names of those who visit the family. By this means it also learns how to know the relatives who are not living in the family home. Children of two to five know very few people beyond the members of their own family circle. Thus Obala, at three years old, did not know who I was, although I had been to her home and talked to her many times. Her parents told me that this was due to their never having told her my name.

Feeding. The food children eat at this stage is the same as that given to the adult members of the family, the only difference being that the children are not restricted to feeding at particular times. However little it may be, a certain amount of food is always left for them in the pot.

The children go out to play when the adults go to their different duties. In the middle of the day they return much exhausted and ask for the portion put aside for them after the morning meal. When there is only one child, the mother, before leaving for her day's work, tells it where to find this food. The varied and exacting activities of a child of this age make food an important factor in its life.

Play

The play groups. The child begins its association with the play groups through the action of the nurses. At first the nurse, next to the mother, is its chief playmate. Through her the child comes into contact with children from neighbouring families and thus acquires friends and playmates. Although it takes the child a long time to make new friends, its social life begins as early as the seventh month when the nurses, wishing to play nearby, seat two babies side by side where they may learn to play together.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 As the child grows older it begins to play by itself.
593 Parents also amuse their children, but because they are generally away from the village, the children must either play with the nurses or by themselves. Before the child has learnt to talk, the play between it and the nurse is that of inducement to laughter or fright. Older children between two and five merely copy what the nurses do. These nurses, who are sometimes the children's own sisters, act as their instructors and demonstrators in the different play activities.

857 *Play activities.* Dolls like those existing in European
524 society are unknown among Luo children. The children play with things they pick up, like stones, leaves—dry or green—and many other natural articles. In short, they adapt their environment to their own needs. They mostly prefer bright objects, and after the end of the day's play they return home with a load of playthings. These they keep in some corner, ready for the next day. Thus the younger children go on day after day bringing in new toys and throwing away the old. As we shall see later, the older children, or nurses, make their own dolls.

857 Once the children can walk and understand other
521 children's language, the older ones may hide, calling for the younger ones to try to find them—a game resembling 'hide and seek'. Some parents maintain that a child
867 of five is able to tell lies merely becuase he or she has had contact with older children already able to tell lies. But the habit of giving wrong interpretations to what they perceive is very common. Thus Otieno, having once suffered from a thorn-prick, mistook any hard object underfoot for a thorn. He was also fond of giving false alarms. I was frequently interrupted by the announcement of his father's return, and these announcements were often untrue.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

864 report to the parents what they have seen, the reaction of the grown-ups is to reproach the children and restrict them from playing with members of the opposite sex. But it is only occasionally that such cases are reported. As a rule, children have such experiences when they are well out of reach. On the whole, the practice is not taken very seriously.

864 867 The child first experiences the restrictions of exogamy when she is stopped from having sexual interest in any other child in her family. For instance, she is reproached when found playing with her cousins. Her growing interest in sex then extends itself to others outside the family. Through the orders of her adult relatives the child is forced to agree to have no sexual relationship with those related to her. These restrictions imposed on the younger generation follow the lineal structure, and it is the duty of the adult members of the community to tell the child the social code regarding sexual relationships. Up to the age of eleven the child accepts restrictions as a matter of course, her ideas of kinship being immature.

867 The child's knowledge of the boundaries of exogamy is uncertain till adolescence, when it takes its final form. Before that, its knowledge is arrived at by two processes: first, the child hears of some boys from a particular lineage and gets in touch with them; next the adult members of the community become aware of the existing relationship and set about to discourage it. The process is repeated elsewhere with the same result, a full knowledge of the boundaries of exogamy coming only with maturity. That it happens by this method of trial and error is clear from instances of marriage proposals being turned down between men and women who are related.

864 A great deal of knowledge about sex is acquired from

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

856 constant help from the mother, the nurse, and other members of the family, the child is able to sit up without support.

[854] The practice of straddling the child on the hip begins during the sixth month. From this period there is a rapid development of its manipulative skill. Between the seventh and eighth months the child begins to crawl about on the floor, and will crawl away from wherever it is seated. As the child's manipulative skill develops he begins to pick up things that attract the eyes, often knocking them down repeatedly. The mouth is also used in testing the properties of articles. There is thus some difficulty in preventing the child from putting dirty things into its mouth.

If a child is not watched it may eat a large quantity of soil, a practice facilitated by its surroundings, the floor and ground in front of the house being bare earth. It is [164] therefore not surprising that children of this age frequently suffer from serious stomach trouble. Even before [854] the children begin to sit up, the nurses, who themselves [857] are only between six and eleven years old, do not effectively prevent them from touching dirty things, because they are sometimes tempted to run away to play, leaving the babies to look after themselves.

856 A child is persuaded to walk by holding its hands and ● 868 helping it along. In this process the older person repeats the words 'Taa, taa,' in a monotone. The practice is continued daily until the child is able to walk; but as soon as it can support itself on its feet the mother or nurse may move away a short distance and try to induce it to come nearer. Every member of the family takes a great interest in all this and loses no opportunity to help the child.

According to my observations, cooing and the earliest symptoms of speech begin to come into evidence in the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

eighth month. When Ageng'o was eight months old he repeated the same performance every time he saw me come in. First he clapped his hands, uttering a sound like 'Aaa, Aaa'; then he clasped them together, pressing them repeatedly against his lips while he made the sound 'Aa baa ba'. This pleased his mother, who was so excited that she spoke to the child in adult language. In addition, Ageng'o could seize two maize cobs, bring them together in front of him, lie on his stomach and push them round in a circle.

There was also a conspicuous development of pleasure when he began playing. There can be no doubt that he derived great enjoyment from pushing the maize cobs along, because that kind of play was usually accompanied by a great deal of noise not intended to attract the attention of anyone. Having scooped the ground with a stick, he would throw it away and, with his fingers spread out, sweep the ground before him. All this indicated the multiple experiences of a developing mind which aimed at satisfying its own curiosity by exploring into the nature of things. A child of this age has no fear of fire until it is scorched by a glowing ember.

At the time when the child begins to say '*Baa, baa, baa*', the mother trains it to imitate sounds of names like '*ba-ba* (*babu, mama, mamu*)'. But the use of adult language in talking to the baby begins as early as the first month. Thus when taking up a baby of one or two months, a mother may say, '*Bi mama*' (come my mother) or '*Bi wuora*' (come my father), according to whom the child was named after. This of course means nothing to the child at such an early stage. Following '*ba-ba*' and '*ma-ma*', it is taught the names of things and people in the family. Gradually a child gets to know these, as well as the words for a few things including food. Next it is taught how to ask for things. On the whole, children do

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

856 not begin to speak until after two years, when they are
868 barely able to construct short simple sentences.

Discipline

861 Formal training in discipline begins as early as the
855 seventh month, at the time when the child may put some dirty object to its lips. Thus a mother, finding her child with soil in its mouth, may slap it gently as she removes the soil, or the hands of the child may be tapped with anything convenient. A child crawling towards the fire would be immediately pulled away, and sometimes it might be frightened with the glowing end of a burning twig in order to impress the danger upon its mind.

856 It is never certain when a child is first going to walk,
164 for the conditions under which children are brought up are such that it is impossible for them to escape being seriously ill at one time or another. Hence the period is largely determined by the health of the child. The average time ranges from eleven to fourteen months. A child who develops very rapidly through the early stages causes its parents much worry, for it is believed that a fast-growing child never survives.

855 *Effects of the child's emotions.* The mother's attitude to-
[844] wards the emotions of the child is based on the deep impression left on her mind by the strain of the birth. Thus, I have come across women who told me quite convincingly that whenever they heard one of their children cry out vigorously they again felt the pain they had experienced during its birth. A mother tolerates the emotional outbursts of her child not only because she loves it but even more because she struggled to bear it. This seems to be the real cause of the so-called humanity of women towards children in contrast with the indifference sometimes shown by men. Instead of setting the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

II

CHILDHOOD

Between Two and Six Years

856 *Physical development.* Between the ages of two and five the means of locomotion mature. Healthy children are able during this period to walk and run about, and, even as early as this, young boys and girls begin to show subtle differences in their motor behaviour. Female children are less vigorous in their muscular movements, while male children tend to exaggerate them. But on the whole both sexes make good use of this newly acquired power. There is an increased desire to move about, intensified by a wish to meet young acquaintances at play.

[855 857] The work of the nurse then changes. Instead of looking after the child, she does simple housework, such as fetching water from the stream or well, and collecting firewood. In place of being its foster-mother she becomes the child's major playmate.

From this time onwards children grow rather thin. It is assumed that this slenderness of body is a sign that they are growing up. It is also believed that at this time male children are stronger than their female contemporaries.

856 868 *Mental development.* The mental development of a child of this age is marked by a predominance of fantasy play, and a rapid mastery of spoken language. The imaginative play occupies longer periods than the other activities. The child learns language from its playmates as well as from the conscious efforts of members of its family. The effectiveness of the speech taught by its parents becomes more pronounced while the orders given begin to be better understood.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

There is no rigid separation of the sexes in these play groups, although there is a clear distinction between the tendencies of the two sexes in any single gathering. The activities are largely imitative of real activities in adult life, falling into definite types, which develop progressively. 857

Female children imitate the activities of the women. They also imitate funeral ceremonies in which both men and women take part. A child isolated from its own sex may be found doing things customary to the other sex, with whom it spends its play hours. Male children build houses; dig gardens; mould bulls, motor cars, trains and carts. Female children concentrate on those activities leading to the preparation of food and care of babies. 857 868

Though there is no strictly-defined list into which all these activities may be fitted, it remains for future investigators in the field of psychology to discover the degree of invention and diffusion of children's play activities. At the moment we must be content with mentioning their main features.

In every instance the activities pass from simpler to more complex forms as the mind behind them develops. Certain of these games in their more advanced forms are carried out in hidden places because the children begin to take actual things, like food, for playthings, some being taken during the mother's absence. Hence, we find that the older children are afraid of playing where they would be observed by their parents.

On being introduced to the play activities, a girl-child might begin with the grinding of the soil, which is done over a small area of cleared ground. Later, the grinding is done on a flattish stone, a leaf being placed below to receive the supposed flour. This is an imitation of the mothers or sisters when they are grinding corn,

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

and is an imitation taking place even among children who do not see grinding stones in use. It is therefore like a vanishing feature of a culture surviving in the form of children's play activity. Leaves of plants or trees are put into a broken piece of pot (*balatago*) with a little water to represent either meat, fish or green vegetables in the process of being cooked. Small dried branches may be used to represent the fire, but actual fire is not used at this early stage. These are mainly make-believe activities in which the children persuade themselves that they are doing real things.

In the rather advanced activities the younger act as servants to the older children, who send them here and there to fetch the necessary articles and also instruct them to keep the supposed fire burning. Between the ages of six and nine, female children, as I have already mentioned, use real things in imitating the preparation of food. Thus, during the mother's absence nurses and other older children may take corn or flour, water and salt, to be made into porridge (kuon). They may also tear off a portion of fish or meat to be cooked in the play huts, which are generally constructed in some hidden place behind the village. Nevertheless, the vessels used are still merely broken pieces of pottery.

The play shelters themselves are small enclosures made of leafy branches. Having used the huts for several days the children abandon them or set fire to them, and there are occasions when actual houses have been set on fire during the absence of the grown-ups. If this happens, nothing is done to the children, for children are everywhere considered to be 'foolish' and capable of any mischief.

Sometimes millet is boiled in old small tins or broken pots. On the whole, the method of cooking is extremely crude, nevertheless, it is significant in that it shows the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

independent progress of the youngsters towards the activities of adult life. At times they are so proud of their successes that they even show their prepared food to their parents; and parents are generally pleased to taste what their children have prepared, even though the articles may not be well cooked.

Female children may also imitate activities involving the care of babies. They make a mould of a baby and a nurse-child, using leaves and some rags for bedding and clothes. The mould-child may be given to one of the younger children, who carries it and so learns how to look after babies. Sometimes maize cobs are used instead of the moulded clay. Children may also imitate the death of a child, and all the children in the group join in the mourning.

Female children are very fond of singing the songs they hear older children sing at festivals. At this age they have a greater inclination to sing than male children, and their songs sometimes help them to quiet crying babies.

As a pastime the nurses engage in 'Kora', a game played with small smooth bits of stone or rounded pieces of broken pottery. This game has a series of rules which every player must observe. Younger children imitate the older ones but are not very successful because their minds and muscles are as yet immature, and they lack the steadiness and precision required for the game. It is interesting to watch, and girls as old as even twelve years take an active part in it. The stones are collected in the palm, then thrown into the air while the back of the hand is turned to receive them, the object of the game being that more than one of the stones thrown into the air must come to rest on the back of the hand. Then by a series of trials one stone is thrown into the air while another on the ground is picked up in time to receive also the stone which has been thrown up. This is

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

857 repeated until all the fallen stones have been collected,
524 when it is considered that the game is won. The rules are, however, more complicated than this brief sketch has made them appear.

Discipline

857 During the period between two and six years, the
865 children have a tendency to play with their friends until late in the evening. The playground may be quite removed from the house; hence parents often have to take strict action to keep their children within the bounds of their homesteads. When they are disobedient, the
[864] normal disciplinary action is whipping. At this age female children are instructed to sit with their knees together. If one of them sits carelessly she is either warned or whipped. Among her duties are the fetching of firewood or dishes for food, and if she refuses to fetch firewood for anyone in the village she may be whipped.
[868] She cannot, of course, be asked to bring fire from a neighbouring home, or to light it, because she lacks the experience necessary for this task. Crying without a cause is sternly repressed and if it is persisted in it earns the child a whipping.

855 *Training in decency.* Luo children from two years up-
863 wards are greatly neglected so far as clothes, washing, and training in decency are concerned. Hence the general appearance of these children is that of dirty little creatures whose clothes are stained with the soil in which they play. Some mothers admit that they fail to wash their children for as long as three days. Other mothers do not worry at all, assuming that their children will go with the older children to wash themselves.

863 Children old enough to walk about are strictly instructed not to empty their bowels inside the home but in front of the house beyond the enclosure. Once shown

FL11 Luo FL11

III

THE SCHOOL AGE

From Six to Eleven Years

857 The school-going age for the Luo girl is characterised
868 by its transitional nature. It is chiefly a time of useful activity, for it is this age to which society has assigned the duty of nursing, and young girls begin and end their nursing service during this period. The mother now transforms the free day of play activity into real work and mobilizes the potential abilities of the young girl for her traditional education. The benefit reaped by the family is a secondary result, because the training given at this stage is part of a long process of education for married life. So far as the girl is concerned, the interest shown in nursing is more intense in the earlier phase of this age—at about eight to nine years.

With the increasing maturity of her mental life, the young girl begins to take an interest in the household duties of older girls, and thus associates nursing with girls of a younger age. We therefore find among the older girls of the age-group a section which despises nursing. The general domestic work of the age includes collecting firewood, fetching water in small containers, and keeping the fire burning while food cooks during the absence of the mother. Firewood is collected from [313] round the village or sometimes further afield in company with older girls. In the groups the older girls may direct the younger ones where to find good firewood, but most of the collecting is done individually by the girl herself. The quantity carried increases as the child [312] grows older, and the container in which water is carried also varies similarly. When her mother is away, the

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

young girl is responsible for seeing that the food already prepared is given to the male and younger female members of the family. Males are by tradition not allowed to dip their hands in the food pot, this being exclusively a woman's duty.

Apart from these strictly utilitarian activities, young girls slip off at intervals to play with their companions. It is during this period that male children part company with females and form their own separate play groups. Those who continue to play with girls to a later age are reproached. Although girls in the earlier phase of this age group do a considerable amount of domestic work, it is mainly of an introductory nature. Thus the mother cannot go away for a night and leave the young girl in charge. The errands given to her are simple and in accordance with her capabilities.

A later phase—ten to eleven. Again this is not an age of independence in domestic work. The young girl's duties are still limited by her inexperience. But now the mother concentrates on making the girl do more thoroughly the few duties she has learned. Two of the more important of these activities are fetching firewood and water. The mother begins to expect her daughter to make several journeys daily to the stream and at least one trip to fetch firewood without being told. If the girl forgets, she may be reproached or beaten. At this time a start is also made in the preparation of adult food.

Discipline

The disciplinary training of girls of school-going age is theoretically a paternal as well as a maternal responsibility; but in practice the mother plays a much more important role than the father. It is against her mother that future blame for inefficiency in normal domestic duties will be directed. The young daughter is strictly

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 disciplined to prevent her from escaping the much
593 cherished traditional education. Discipline is weakened, however, when the nurse is not the daughter of the woman engaging her. In these circumstances the mistress, fearing to lose the nurse's services, tolerates behaviour she would not countenance in her own daughter.

868 In the process of training, the young girl is expected to be competent in household duties as early as possible. Mothers have frequently told me that girls who begin practising household duties later than the school-going age, are generally very inefficient in domestic work; thus in their early discipline mothers protect themselves against future blame for poor training.

Apart from the primary motive of training the young girl as a prospective wife, the mother is influenced by her desire to make her daughter of practical use to her-
[594] self as soon as possible. The help from girls of school-going age greatly relieves the constant pressure of a woman's household tasks. This training also makes a girl observe feeding manners more strictly.

861 In Luo families, a young girl is at the mercy of every-
593 one except her younger brothers and sisters. When disobedient she is whipped with a stick. She thus becomes equally tyrannical towards her juniors when they disobey her. One girl told me that if her sister disobeyed her she seized the child, knocked her down, and beat her. This reflects the general attitude.

857 *Nursing.* Although some girls of this later age act as nurses, nursing proper is more characteristic of the earlier stage. When she nears the age of eleven, the young girl rebels against nursing and runs back to her home or, if nursing her own brothers and sisters, escapes to relatives out of reach of her immediate family. This
[856] break takes place as soon as the breasts begin to develop and is perhaps a revolutionary step caused by the grow-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

855 than themselves. As the girls grow older, feeding at odd
264 times is restricted. The girls eat with the mother while their brothers eat with the father. The mother of the family takes particular care that the brothers get some food and even though she may go without herself, she sees that the children eat.

868 *Female education at school-going age.* The traditional education as given by the parents is strictly utilitarian. Its main aim is to prepare the girl for her future as a wife in a family and as a mother of children.

868 The girls accompany their mothers or older associates
312 to fetch water, the younger ones being given a very little water in a small pot, usually used for milking. Larger pots are given to the girl as she grows older and stronger, the girls of six and seven being eager to imitate their older playmates. A few of the male children like to go to fetch water with similar containers, but their mothers do not encourage them. The mother of a young girl watches her carefully to see if she is interested in imitating these activities before giving any encouragement.

868 When the girl, at the age of eight or nine, expresses a
[241] desire to dig, the mother takes her to a garden early in the morning to let her do so, and releases her at about
[252] eight o'clock before the sun becomes too hot. At this time too, if a grinding stone is available, the mother teaches her child to grind corn, this being a continuation of the interest in grinding soil shown at play. The older girls of the group are instructed in giving gruel to the young children they nurse.

868 In the preparation of food, the girls first learn how to
252 prepare gruel for the babies. But proper cooking comes
861 very gradually and they learn it under the constant observation of the adult members of the family. The food cooked is first tasted by the parents only, when criticisms are openly made and encouragement of future

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

868 ●
252
861

success given. In this atmosphere the girl slowly learns to master the art. It is not until she is thoroughly competent that she is allowed to prepare food for visitors.

593
855

Relationship with older children in the family. At first the young girl grows up in fear of and with a submissive attitude towards her older brothers and sisters, the attitude of fear decreasing towards her sisters as she begins more and more to share the same activities. Thus by the time the girls reach adolescence there is a growing feeling of companionship which brings them closer to each other in their everyday tasks, and any dominating attitude becomes consequently weaker. But among boys this attitude persists into adulthood, weakening only with the independence which adult life brings with it. Bullying is less noticeable among girls; boys of the school-going age become very tyrannical with their younger brothers and sisters, and their behaviour leads to frequent squabbles.

[857]

The attitude of a girl towards her older brothers and sisters is influenced by the treatment she receives from them. She can be sent on an errand by any older member of the family. Thus an elder child often passes orders on to her juniors since the errands in a large family are many and frequent. In this way the young girl learns to avoid and perhaps to dislike certain members of the family. As she grows older, she in turn exercises disciplinary action over those beneath her.

Parental attitude. The father plays a rather detached role, but in actual fact he retains a deep-seated interest in his growing daughter as a future promise of wealth. Though fundamentally mothers are equally interested in sons and daughters, they have at this time a more direct influence over their girls. A mother is interested in her daughter partly through her maternal responsibility and partly because of the girl's immediate value to the family, the father being more definitely concerned

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

593 855 with the male children. Maternal control over the young girl is very great and remains about the same when she reaches adolescence, though at this time the father's control becomes increasingly essential in keeping the growing personalities of the family in order.

857 312 291 482

YOUNG GIRLS GOING TO FETCH WATER

857 868 THE BEGINNING OF SPECIALISED ACTIVITIES

The school-going age marks the period when male and female children part company. Young girls become increasingly occupied with domestic work, such as fetching water and firewood, tending babies and watching the fire, while male children of the same age continue to play in groups for a much longer period. Apart from herding, which is now less general than in the past, boys of school-

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

going age have little to do beyond playing in gangs. It is thus very common to come across gangs of male children engaged in social games. Because girls are occupied with their household duties it is much easier for boys of this age to go to school, causing less family disruption.

With her time for play diminishing, the young girl struggles between work given by her mother and the powerful attraction of the play groups from which her domestic duties tend to exclude her. Therefore if she is to discharge her traditional task of education, a mother must labour to keep her daughter from associating with these groups.

The girls' early training enables them to take on family duties at which boys of the same age would fail, for in their training for responsibility the girls of this age are far in advance of their male counterpart. But the limited time in which the training must be completed has the effect of overloading a girl's school-going period.

The play groups. The activities carried on by girls from six to eleven years old are a continuation of those of the previous age group from two to five, but the play becomes more mature and better organized. The older girl assumes the role of organizer of the play activities of her younger sisters. Thus the activities become more complex and besides those involving the imitation of grinding corn, other articles of food appear such as meat, fish, and leaves to represent vegetables.

During my observations I noticed a tendency amongst young girls at play to give female names to their dolls, which probably indicates that they identify the dolls with themselves. Thus, when I suggested male names for the dolls, they were rejected. In assuming the role of the doll's mother it again seems clear that the girl identifies herself with her own mother.

Girls may also be found playing the part of a mother

[1 i.e. From six to eleven years old.—ANALYST]

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

614 very large degree. Their family system remains strong and
178 largely unimpaired by the impact of Western civilization. The patriarch of the extended family unit, the *jokakwaro*, remains the local authority. Because a series of family groups together form a territorial unit, the sub-clan, the strength and solidity of the Luo family and lineage structure remain supreme. Obviously there have been changes. Basically, however, the changes are superficial.

562 The role of women in Luo society is a subordinate one. Indigenously they play no part in the major ceremonies or rituals and have never had political authority. They do not organize in age groups or societies as in other cultures, and remain primarily the property of their father and his lineage or, on marriage, the property of their husband and his clan.

595 Polygyny is still the ideal and goal of the majority of Luo men. A recent village survey showed that taking a sample of 744 homesteads, which varied between a simple monogamous family and the very large unit of the extended polygamous family, 55 per cent were monogamous units, of which 9 per cent had a leviratic wife or wives, thus making them socially polygamous units; 45 per cent were polygamous homesteads, of which 11 per cent had a leviratic wife or wives. Only 27 per cent of the total sample were found to be simple monogamous households, that is one in four of the family type associated with Western culture: a man, his wife and children. The remainder were either polygamous or had leviratic wives or were of the extended family type. Of this 27 per cent, moreover, it was the ideal of the vast majority to become polygamous later.

●871 Education among the Joluo has increased rapidly in recent years, and it was found in our sample that 63 per cent of the boys of school age were either at school or had been to school for more than one year. The figure was 30 per cent for the girls. Of the adult males, however, only 26 per cent had been to school, and of the married females, only 7 per cent. The standard attained, moreover, was not high. More than half the male

19:Wilson E-5 (ca. 1950) 1960
FL11 Luo FL11

group had less than three years' education and over half of the female group had less than two years' education. This pattern, however, as already indicated, is changing rapidly. The majority of the Joluo are nominally Christians, although half of those who called themselves Christians were polygamists. Historically, of course, all of the schools in Luo were Mission schools and therefore those who go to school tend to call themselves "Christians," and most of them in fact have a basic understanding of the Christian religion.

One aspect of Joluo life which has changed considerably is the tremendous increase in spatial mobility. Prior to European ascendancy, the Joluo did not move among the tribal units because of the continual wars between them. Moreover, banishment from the tribe usually meant death at the hands of the neighboring Nandi, Kipsigis, or Masai. Lately, however, the village census established that most Luo males had been out of their district and well over half had been to Nairobi or beyond. At any given point in time nearly one half of the adult male population is engaged in employment away from the tribal area. Nearly one half of the Joluo adult women in the sample, 40 per cent, had been outside of their district, although only 11 per cent had been to Nairobi or beyond. It is the custom, therefore, for married men to migrate for labor and to leave their wives and families in their family locations to cultivate the gardens.[1]

HOMICIDE AMONG JOLUO

The Nilotic Joluo regard violence as an unnecessary loss of control, or at best a calculated necessary last resort to secure

[1] Professor E. E. Evans-Pritchard has written a study of the Luo in his "Luo Tribes and Clans" (*Rhodes-Livingstone Journal*, No. 7), and description of the marriage customs of the Luo in his "Marriage Customs of the Luo of Kenya" (*Africa*, Vol. xx, No. 1, 1950). Dr. A. Southall has published a memorandum entitled "Lineage Formation among the Luo," Memorandum xxvi, International African Institute, London, 1952. My own work among the Luo, *Law and Custom of the Joluo People of Kenya*, is forthcoming.

FL11 Luo FL11

9. This example is used time and time again by the Luo to prove the point that the tendency to commit suicide is inherited or caused by ancestors. 159 762 828

I was able to follow one particular series of events in connection with Luo marriage laws and customs over three years, which began with the elopement of a girl and her lover, and ended in suicide only a month before this chapter was written.

Marriage in Luo is traditionally arranged by the family of the boy and the family of the girl. Not infrequently, because of debt or close friendship, a father may promise his daughter in marriage to a friend or creditor while the girl is still very young. He obtains the animals to which he is entitled (*dho i keny'*) approximately one half of the final bride-wealth, at that time and the girl is known as *nyar kiseke*, "the wife of the beer reed," as this arrangement is usually contracted and finalized at a beer party. So it was in the case we are about to describe. 584 159 762

Suicide Case No. 10.

The girl in this case had been promised by her father when she was but three years of age to a friend of his own age group. The father, Opio[2], was a well educated Jaluo, and by the time his daughter, Akech, was ready to be taken in marriage, at the age of 18, he was employed as the headmaster of an intermediate school administered by a local mission. He had insisted that his daughter be educated to enhance the final payment (*dho miluhini*) of her bride-wealth. She was, for an African woman, a well educated girl. She had received a secondary school education where, in this particular segment of the Joluo tribe, fewer than 1 per cent of the girls have had as much education. [871]

Akech had been prepared for this event all her life. She knew her future husband and from a child, each time he visited

[2] All names are fictitious, but common Joluo names.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

the older girls among whom the younger girls sleep. Male visitors from the homes of women in adjoining homesteads also provide an opportunity for learning the coquetry and customs of the more mature girls. Although girls of school-going age are inexperienced, they are not despised on these occasions, though the necessity of keeping order in the room forces the older girls to keep an eye on the younger girls to discourage unnecessary laughter.

The family and the school. Modern school education acts as a break in the continuity of education for domestic purposes. The school demands regular attendance, whereas the mother requires the labour of her daughter. For the young girl, the school provides a relief from hard and tedious work for the family, and from her mother's supervision. It also provides an unrestricted field of association with other girls, whereas at home she would rarely have time to see her girl friends. Thus the school gives a very different environment. There is a general tendency to become lazy among schoolgirls passing into adolescence.

The school forces parents to sacrifice themselves; hence there is no great keenness among mothers with regard to their daughters' education. The majority of them ignore it or are actively against it. In most quarters the desired knowledge for girls is limited to reading and writing. Beyond this, women have not been able to appreciate education for girls, and they often delay their daughters' entrance into schools. Thus in the lower Primary stages most of the girls are slightly older than the boys.

Education for girls is also distrusted because at present mothers feel that after it their daughters would not fit into the pattern of life into which they were born. There is also a feeling that the traditional education at home would suffer.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

848 source of much social rejoicing to discover that a [836] married woman had been found to be a virgin. Such a [585] bride was given a high prestige among the other women. [554] In the past, if a woman gave birth to an illegitimate child, her only chance of marriage was to an old man [595] with a number of wives. There was no possibility of occupying the position of chief wife of the family; and [583] the heads of cattle paid were much fewer. The child was taken by the man who legally married her, but she was not allowed to give birth in her own home. Everything was done to get rid of her as soon as possible.

848 Examples of such pregnancies are very common at 17·8 present. But although social disapproval is still keenly felt, modern conditions have become more favourable 684 to women in this situation, and an increasing number of them are being married to bachelors. Unlike some communities, no death punishment was ever given. If the occurrence takes place between close relatives the matter is kept secret; in the past, however, the couple could be exiled.

Modern Education and Adolescent Girls

●871 Progress in the education of adolescent girls is ham- 883 pered because the Luo people do not appreciate its suit- 562 ability to the environment of their women. To the 178 majority, modern education is associated with clerical work and the many other jobs that men take up after a school career. The position of girls in this scheme is not clearly envisaged.

[582] The social importance attached to marriage is having to adapt itself to a prolonged school career and the raised age for marriage which this implies. An inability to appreciate schooling for girls is also based on a high esteem for the traditional education which it tends to interrupt and weaken.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

584 881 on their own initiative, the object being to familiarise them with the relationship between husband and wife and with the prospective husband's goods and to establish a good understanding. At present there is no instruction on the care of babies, such knowledge being acquired after the woman has given birth.

•871 178 [881] The difference between the traditional training of brides and their modern education, even in its elementary stages, is tremendous. While traditional education is constantly weakening, modern education tends to develop along its own independent lines, omitting rather than assisting those elements it is intended to improve. It is likely that a stronger foundation could be built through modern education if the latter paid more heed to those features of community life which most urgently require improvement, but which in themselves provide a groundwork of practical knowledge.

The pace of progress in Luo society is bound to be slow while the sphere of women's life remains still radically conservative. It is arguable that modern education emphasizes literary theory too much, yet the traditional education which stresses practical work from early childhood, gives only a limited time for theory, even in maturity. However this may be, there is no doubt that [881] there now exists too much ignorance of the requisite knowledge about sex, for girls and young women can be met who plainly profess ignorance on certain fundamental features of the traditional training.

It therefore seems necessary that if education is to be of real use and interest to girls, some features of practical value to society should be included. This presupposes a thorough study of the subject concerned and a wise selection of those elements which would inspire the pupils to improve themselves and the society in which they move.

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

over 5,000 people are spraying; here, with sixteen times the population, not 500 are. In the whole of Nyanza, with its 300,000 families, we have only sixty-seven Sahiwal bulls.

'On cattle, most of them won't budge. For instance, a man's prestige is somehow linked with that of his bulls, and they are most reluctant to castrate anything. Pioneers who try improved methods are unpopular and their neighbours are apt to gun for them; one man, for instance, had his pigs burnt alive. Still, we plug on. We have controlled rinderpest, if not East Coast fever—every year we give about 200,000 rinderpest inoculations. We export half a million hides and skins and are trying to improve their quality.'

It is perhaps worth noting that crops, whose improvement is considerable, are grown by women, but livestock is the exclusive concern of the men.

'In the years ahead,' this rather disillusioned vet concluded, 'we have only got to get across two basic principles: that a cow wants food all the year round, and that a calf needs milk. But it will take another twenty years before we make any real dent in Nyanza.'

On the other hand, some things unexpectedly catch on. A district officer who had seen fish-ponds in Malaya made half a dozen and stocked them with tilapia. Local people observed the ponds and, without any serious propaganda, dug others like them. Now there are over a thousand in Nyanza. They cost nothing, the Government provides free fingerlings and is full of plans for fish-ponds everywhere as the basis of a small industry.

V

Maseno is a dynamo of education. It was started by the Church Missionary Society. 'The general plan of campaign was based on the model of Iona,' wrote the Rev. John Willis, later Bishop of Uganda, who with Bishop Tucker chose the site in 1904. On 14th January, 1906, the first resident missionaries, Mr. and Mrs. Hugh Savile, moved in—there was not much to move into, merely a grass hut under a tree that housed both the Saviles and a primitive dispensary. Nearly

21:Huxley Q, T-5 (no date) 1960 FL11 Luo FL11

fifty years later their son, Mr. Paddy Savile, after many years' service in Tanganyika, was to become Chief Agriculturalist to the Government and help to make a path for Progress through the land of his birth. Maseno mission was envisaged as 'a Christian base from which the Gospel might be carried far and wide into the surrounding country, with a school for the sons of Luo chiefs at which future leaders of the country would be trained in a Christian atmosphere.'

Four small boys called Onduso, Odindo, Owiti and Oroa were drafted from Kaimosi to form a nucleus and every 'chief' was asked to contribute two sons. 'Chief' was an arbitrary term, and the leading Luo objected strongly to the disappearance of their sons, probably regarding it as another form of slavery. In those days the Luo went stark naked, used beads or hoes for currency, and prized most highly the black ostrich feathers which warriors wore as head-dresses.

'In five years' time a hundred small boys from the school were sent out, two by two, for a fortnight at a time, to teach in Kisumu and in the villages. Then they came back to Maseno for a month for further teaching. In this way the original Iona idea began to be realized and Maseno became a base of Christian influence.' Bishop Willis developed this idea in a letter: 'It affords a shelter amid a sea of temptation; it makes Christian teaching applicable and Christian living a possibility.'*

So from four small and doubtless bewildered boys under a tree, Maseno developed until by the time of its golden jubilee it embraced primary, intermediate and secondary schools, a teacher-training college, a Jeanes school for adult education, a college for agricultural instructors and veterinary scouts. Even the girls had by this time been included, although their education for years lagged far behind that of their brothers.

At the time of my visit this part of Nyanza was a-buzz with rumour and diatribe, for the District Council in Kisumu had just been dissolved by Governor's decree. To balance the official line on this, I asked to meet a firebrand or two, and everyone agreed that Maseno was the place for a crackle of

RAIN-MAKING

Little information is available on the processes of rain-making among the Luo. Roscoe states that it is an important ceremony and is performed by a *musoga* priests who lives among the people for this purpose.(1) According to Northcote, the rain-maker is greatly esteemed, and his homestead is usually found near a big tree which is considered sacred. When rain is wanted, he gathers some herbs, puts them in a large pot of water and boils them under the tree. He draws off a little into another pot and, sucking it up through a reed, squirts it into the air, after first blowing through the reed and making the pot bubble.(2) Evans-Pritchard mentions that the Luo rain-maker is called the *won koth* and that sometimes his functions are combined with those of the *jabilo*. Rain-makers among the neighbouring Bantu seem to have a higher reputation than Luo *jakoth* and are often consulted.

WITCHCRAFT

Sickness is thought to be due either to the malevolence of a ghost or, more frequently, to magic worked by some envious person who wishes to bring misfortune on his victim.(3) In either case the aid of a witchdoctor is sought and he, by means of various incantations, discovers the cause and the culprit. A sorcerer may cause death by spearing the shadow of his victim, by working spells, by hiding certain objects near the house which bring sickness to the inmates. If a ghost is causing trouble the witchdoctor prescribes offerings and sacrifices necessary for appeasement. He also discovers thieves, conducts ordeals and divines the causes of events. He makes counter-magic to defend people against the activities of sorcerers and is the general prescriber of all cures. Johnston mentions a 'deeper magic' *(jamkingo)* which, among the Gesi tribe is practised by the blacksmiths.(4)

LIFE CYCLE

BIRTH

After the birth of a boy the mother stays inside the house for four days; for a girl, she stays inside for three days. The father of the child does not eat or sleep in the hut until the child begins to cut its teeth.

Twins are considered lucky; their arrival is attended by many ceremonies and by propitiatory dances.

PUBERTY

Until marriage, girls help their mothers in the fields and assist them in cooking and carrying. Boys help in herding the animals. At puberty both boys and girls have their front lower teeth extracted and for four days they remain in their homes. After this period they go about visiting

(1) Roscoe, *The Northern Bantu*, 1915, p.292.
(2) Northcote, *J.R.A.I.*, 1907, p.64. (3) *Ibid.*
(4) *The Uganda Protectorate*, Vol.II, 1902.

881 304 friends and receiving presents of fowls. Girls, in addition, have their bodies scarified on the sides and back. From this time on until marriage the boys live in the bachelors' hut and the girls in the unmarried women's quarters. There is no mention by any of the authorities of an age-set system.

DEATH

764 The dead are buried close to their homes, a man on his right side with the hand under the head and a woman on her left side, also with the hand under the head.(1)

765 Friends and relatives gather shortly after death and, if the deceased was a man of importance, the whole of his clan is represented. Every man brings his companion bull and rides it. All dress up as if for war and the *buru* party takes place. If the dead man was not very important the mourning is limited to shaving the head and painting the body with white clay. Offerings are put on the grave of the deceased.

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

shave their heads, taking care to keep separate the hair which is cut off. This hair is hidden away in some place near, by preference in a rat-hole or in some hole where it is not likely to be found again. 846

Birth of twins. At the birth of twins the parents remain together in one house for ten days, and the midwife waits on them. When this time of seclusion ends, a small pot of blood is drawn from the neck of an ox, cooked and given to the parents to eat. After the meal they are escorted to the river, washed, and their heads shaved. Their house is then swept and the floor smeared with cow-dung, and friends come and dance in the village and drink beer. The mother takes the twins a round of visits which lasts several days, but she returns home each night to sleep. At each house she visits the people give her presents of grain. When the visits have been made the mother brews beer with the grain she has received in presents, and her friends again gather to dance and to drink the beer. 845 [431]

Initiation ceremonies. Children live in the same village with their parents and under their control. Until marriage they lead a free and happy life, with few wants and cares. The boys assist in herding cattle, and the girls help their mothers in their fields and also carry wood and water and assist in cooking. Their duties are light and there is no force beyond argument used to make them work. Children imitate their elders in seeking ornaments to wear and in smearing their bodies with oil and red or white paint. When they come to the age of puberty, their four front teeth in the lower jaw are extracted and they are initiated in the customs of the clan. For four days they remain in the house, after which they go about visiting their friends and receive presents of fowls. Girls go through the same ceremony as boys in having their teeth extracted, but, in addition, their bodies are scarified on the sides and back. Should there be excessive haemorrhage when teeth are extracted, the parents send to the man who has the bracelets of the deceased person after whom the boy is named and borrow them, and the youth wears them until the bleeding ceases. When the ceremony of extracting the teeth is over, the boys are sent to live in the boys' quarters 857 [302] 881 304 [431] [752] 882

FL11 Luo FL11

883 On the whole, girls dislike those men whose chief object
864 is sexual satisfaction. Their caution is often the result of
881 talks on the nature of sexual relationship which girls hold in their communal sleeping places, and with older women.

When newly-married women return to their maternal homes, they freely discuss among themselves—especially during sleeping hours—their experiences with their husbands. This affords an opportunity for the unmarried adolescent girl to obtain first-hand information on the nature of relationships in married life.

883 *Opportunities for contact.* The normal first meeting between girls and those with whom they may have sexual relations, takes place by conscious or deliberate arrangements made by the parties concerned, at marriage ceremonies or in public places like market centres or towns. They first make each other's acquaintance somewhere between the girl's and the man's house, particularly when the two live in close proximity. These are distinguished from any other meetings in that they are arranged between the male friends and the older adolescent girls or those on the threshold of adolescence.

The meetings which take place during marriage ceremonies are observed with great interest by girls of the nursing age, who watch the older girls' behaviour towards their men friends with keen curiosity. In many instances introductions are managed through the
584 brothers of the girls. Introductions resulting in marriage
883 may also come about through a girl first acquainting herself with sisters who introduce their brother to her. Brothers of adolescent girls would, like all members of the family, disapprove of a prolonged friendship without any sign of betrothal and would do all they could to persuade the girl to look for another friend.

881 *Sex education of adolescent girls.* Girls in the old tradi-
883
178

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

tional society had a more deliberate or conscious sex education than they receive in modern times. Instruction on the nature of sexual relationship was formerly given by an old woman of the village, whose hut served as a communal sleeping place for the girls. This old woman was one who must have stopped giving birth to children. She was either a grandmother or an elder wife in a polygamous homestead. The communal sleeping places are still a feature of the girls' environment, but many of the modern huts have no experienced woman in them; hence the girls have lost their former source of instruction on both the marital and the following day-to-day relationships.

The change from the traditional type of sex education has forced girls approaching marriage to seek information elsewhere. At present they usually make enquiries of experienced married women living in their neighbourhood. Beyond a few cautious warnings, mothers are rarely known to take part in the sex education of their daughters while fathers are completely detached from this field of enquiry.

Sex activities in the communal sleeping places. Talks on sex are not the only activities engaged in by adolescent girls in their sleeping places. In some areas they also receive nocturnal visits from young men who have failed to find suitable opportunities to meet them during the day. This is not a widely spread practice, however, which may be due partly to the strict morality imposed by Christian moral conventions.

Sometimes the girls themselves make arrangements to welcome these visitors by night, remaining awake in order to open the door for the men with whom they have made the appointment. Sometimes this form of visit is also carried out by young men without the girls' consent, but if they are discovered, a great outcry is

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

raised against such raiders. It is considered a disgrace to be discovered as an accomplice in raids on the girls' sleeping quarters.

On attaining Maturity

The attainment of maturity among girls is marked by the first onset of menstruation. In the past this was kept very secret until several periods had been experienced, and even now its first occurrence is kept secret. Formerly, early preparations were made for it by instructing the girls about the physical changes involved.

The information regarding this important physiological happening used to be given by the old woman in whose hut the girls slept. At present the information is obtained largely from experienced women with whom the girls associate. In the past there was no initiation ceremony to celebrate the event, and today the position remains the same. Although the betrothal of a girl could take place as early as ten, the social attitude was and still is that girls should not be handed over to their husbands before attaining maturity. Even when the mutual handing over took place before this age, the girl was obliged to live in the home of some older woman until the advent of menstruation. It is still believed that premature marriage results in great weakness to the girl.

The social position of a girl on reaching maturity. The social position of the newly-mature girl is vague and uncertain. Any abnormality of mind, character or body, is a source of anxiety to her family. Moreover, as most girls marry between sixteen and eighteen, there is a tendency for ill-wishers to over-state the ages of girls above that limit, because the attitude of society towards them is similar to that adopted towards overdue goods. Those who fail to marry at an early age thus become subjects of scorn. So strong is the pressure exerted by

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

group of girls or young women meet, there is comment on what has been said about so-and-so in certain quarters. Mixed with this unwelcome gossip may come other features of great encouragement. Thus there is much emotional strain in the years preceding marriage. It is a time when both parties to the engagement are uncertain about what may develop next.

Amidst all this, the woman still has the freedom of talking to any young men she meets, and the emotional uncertainty, which is much stronger with a girl, compels her at times not to put all her hopes in one man. Although her relationship with former friends becomes relatively weak, she does not lose interest in them until she eventually gets married. A great deal of persuasion is employed. Each time she meets her friends her sympathies are tested. In this difficult period the male and female relatives of the man should play a beneficial part. Some carefully arranged marriages are broken owing to lack of such support.

In general, a betrothed woman is an object of competition. Once engaged, the forces that work against her engagement are let loose. Reports true and false are continually passed on. In the girl's family, the mother continues to instruct her on how to address the relatives whom she will meet in her new home. If the marriage is to be cancelled, the dowry paid by the first candidate must be paid back before the cattle of the other are accepted. Should the girl run away with someone else, she will, on her return, be beaten, and it is only after a long interval that the offence will be forgotten.

Pre-nuptial and modern education. There is no special attempt to educate mature girls just before marriage. The nature of the training they receive is merely a continuation of that given to them in their adolescence. Thus they obtain information about their future status

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

584 on their own initiative, the object being to familiarise
881 them with the relationship between husband and wife and with the prospective husband's moods and to establish a good understanding. At this time there is no instruction on the care of babies, such knowledge being acquired after the woman has given birth.

871 The difference between the traditional training of
178 brides and their modern education, even in its elemen-
[881] tary stages, is tremendous. While traditional education is constantly weakening, modern education tends to develop along its own independent lines, omitting rather than assisting those elements it is intended to improve. It is likely that a stronger foundation could be built through modern education if the latter paid more heed to those features of community life which most urgently require improvement, but which in themselves provide a groundwork of practical knowledge.

The pace of progress in Luo society is bound to be slow while the sphere of women's life remains still radically conservative. It is arguable that modern education emphasizes literary theory too much, yet the traditional education which stresses practical work from early childhood, gives only a limited time for theory, even in maturity. However this may be, there is no doubt that
[881] there now exists too much ignorance of the requisite knowledge about sex, for girls and young women can be met who plainly profess ignorance on certain fundamental features of the traditional training.

It therefore seems necessary that if education is to be of real use and interest to girls, some features of practical value to society should be included. This presupposes a thorough study of the subject concerned and a wise selection of those elements which would inspire the pupils to improve themselves and the society in which they move.

MARRIAGE CUSTOMS OF THE LUO OF KENYA

E. E. EVANS-PRITCHARD

THIS paper forms part of a short general account of the Luo based on a rapid survey made in 1936. The survey was financed by the Leverhulme Grants Committee. An earlier part, describing the political structure of the Luo, has recently appeared in another journal.[1]

Apart from information provided by Father Hartmann[2] and a fuller account by Mr. K. C. Shaw,[3] early accounts of Luo marriage are slight, and in some cases misleading. Mr. Shaw's account covers a good part of the ground covered by the present paper, but it is useful to have two independent accounts, especially as both were written from information obtained through interpreters. When I went to Kenya I did not expect to visit the Luo and I had not therefore read Mr. Shaw's article. Mr. Shaw and I disagree in a number of particulars in the overlapping parts of our papers. It does not follow from this that either of us is wrong in our statements because, as Mr. Shaw points out, there is some variation in local custom in the different tribes of Luoland. My own information on this particular subject was mostly obtained from the Alego tribe of Central Kavirondo. In the main I have followed the account given me by Pastor Ezekiel of that tribe. In doing so I have omitted much detail.

Simbo

Courtship and marriage are intimately connected with the custom of making love to girls (*ndo*) in the *simbo* or bachelors' dormitory, the hut nearest to the entrance to a Luo homestead. Youths arrange with girls to visit them there at night, and when a youth is visited by one of his sweethearts the other young men of the home sleep elsewhere. He plays with the girl and has intercourse between her thighs and they sleep together. He must not penetrate her—that is regarded as shameful, and it will be known on the day of her marriage. If a girl comes from a distance to visit her lover she may spend several nights with him in the *simbo*. A girl may have several lovers in different homesteads whom she visits from time to time; she pleases herself in these matters. The young men will not quarrel about her, nor will her father and brothers interfere in her love affairs. She may continue the practice throughout the stages of her marriage to another man right up to the *rim*, the final ceremony of marriage. I was told that a girl does not usually visit the *simbo* more often than once or twice a month. Occasionally the lover employs a harpist to entertain the girl and his friends on one of her visits, and there is singing and dancing. Between the songs youths, and sometimes girls also, stand up and boast of their virtues, of the number of their friends and sweethearts, of their wealth, and of their families and lineages; and when they have finished they throw a gift to the harpist, maybe to-day a shilling. Other youths then try to outdo them in boasts and generosity.

FL11 Luo FL11

shave their heads, taking care to keep separate the hair which is cut off. This hair is hidden away in some place near, by preference in a rat-hole or in some hole where it is not likely to be found again. 846

Birth of twins. At the birth of twins the parents remain together in one house for ten days, and the midwife waits on them. When this time of seclusion ends, a small pot of blood is drawn from the neck of an ox cooked and given to the parents to eat. After the meal they are escorted to the river, washed, and their heads shaved. Their house is then swept and the floor smeared with cow-dung and friends come and dance in the village and drink beer. The mother takes the twins a round of visits which lasts several days, but she returns home each night to sleep. At each house she visits the people give her presents of grain. When the visits have been made the mother brews beer with the grain she has received in presents, and her friends again gather to dance and to drink the beer. 845 [431]

Initiation ceremonies. Children live in the same village with their parents and under their control. Until marriage they lead a free and happy life, with few wants and cares. The boys assist in herding cattle, and the girls help their mothers in their fields and also carry wood and water and assist in cooking. Their duties are light and there is no force beyond argument used to make them work. Children imitate their elders in seeking ornaments to wear and in smearing their bodies with oil and red or white paint. When they come to the age of puberty, their four front teeth in the lower jaw are extracted and they are initiated in the customs of the clan. For four days they remain in the house, after which they go about visiting their friends and receive presents of fowls. Girls go through the same ceremony as boys in having their teeth extracted, but, in addition, their bodies are scarified on the sides and back. Should there be excessive haemorrhage when teeth are extracted, the parents send to the man who has the bracelets of the deceased person after whom the boy is named and borrow them, and the youth wears them until the bleeding ceases. When the ceremony of extracting the teeth is over, the boys are sent to live in the boys' quarters 857 [302] 881 304 [431] [752] 882

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

882 with the youths of the village, and girls go to the young women's quarters, and both cease to live in the house of their parents. From this time until marriage these young people live in their communities and have much freedom, their morals not being considered, but each following the leading of natural impulse.

11: Hartmann M-5 (ca. 1920)1928 FL11 Luo FL11

945 smears a little clay in front of both ears of all the people who come to the feast, and
852 each of them do the same to the mother in return. All of them decorate their necks
and waist with *bwombwe*, a creeping plant; then they start a most immodest dance;
[831 scarcely covered with their goatskins they simulate the copula, and the vilest songs,
786] which no decent person could ever listen to. After the dance they enter the kraal
535] where food is ready. Then they have the beer. The relations of the woman stay over for the night, but all the others go home.

852 *Mirnd Kumu* is a similar dance, which is indulged in, when a woman has
831 given birth to a child, of whose conception she did not get aware of for some con-
535 siderable time. The people who come to this dance are far fewer; it does not last
786 as long either. In stead of a bull only a goat is killed by the relations of the woman, and some beer is brewn for the feast. Other ceremonies are the same as after child-birth under usual circumstances.

Betrothal and Marriage.

584 Before any other arrangements are made, a boy intending to get married tells his parents that he wants to look out for a partner through life. If the father has any cattle towards the dowry he will agree, and tells his son to make his choice, and inform her relations. When he has found a likely girl he invites a couple of friends, one of whom at least knows the relations of the girl well
● [882] *(jatielo)*. With his friends he pays a visit to the kraal of the girl, and enters the *simbu* i. e. the hut in which the boys of the kraal live.

No sooner have they entered the *simbu* or the girls of the place go to greet the visitors, after which they bring them pipes and tobacco and go to fetch or prepare some gruel for them to drink. In the meantime the *jatielo* goes to the hut of the particular girl's father to tell him that a friend of his has come for his daughter. *The father will inquire from the jatielo* what kind of lad the boy is, whether he is of good family, whether he is not the son of a witchdoctor, whether he can pay a decent dowry, ect.

If the father agrees the *jatielo* goes back to his friends in the *simbu* and reports that the father is willing, whereupon the boy proposes to the girl. There and then the girl decides whether she agrees or not. If she does not want the boy, then all is finished and visitors go home at once. If she agrees, they stay for the night. They sleep in the *simbu* seperately together with the other boys and girls.

583 Then, in former years, in the early morning the visitors would catch the girl after she had left the *simbu*, and take her to her fiance's village *(muko)*. On account of a government regulation, by which the dowry is now more or less fixed, this practice is no longer adhered to.

583 The boy and his friends go home. He informs his parents, who next day
585 send the *jatielo* back with somebody else to pay the first instalment of the dowry, usually 2 or 3 head of cattle. They stay over the night, and in the morning they catch *(muko)* the girl, for she pretends not to like going along. After they have had some gruel to drink, the boys who brought the cattle more or less drag her out of the kraal. The girls from her village strip her absolutely naked, and the boys from there follow those who fetch the girl to take from them some of their orna-

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

101 174 inhabited Northern Unyoro (where a fragment of them remains), and that the Bahima and their Bantu subjects drove this branch of the Nilotic people across the Albert Nile to the north-west (where they remain as the Aluru) and into Busoga (across the Victoria Nile) on the south-east. From Busoga they appear to have been driven on by the Bantu right through the Kavirondo country until they finally settled and throve round the shores of Kavirondo Bay, where they at present bear the name of Ja-luo or Nyifwa. It is a remarkable fact that the Ja-luo to this day are

[501]

497. A BOAT RACE OF NATIVE BOATMEN, WHITE NILE

called by their Bantu neighbours "Abanyoro," which would indicate that this theory of their origin is correct.

361 The Ja-luo reside in fixed villages of from ten to fifty huts, which are surrounded by hedges of aloe and euphorbia. Formerly they built mud [178] or stone walls round their settlements in imitation of the Bantu Kavirondo [312] to the north. But this is a custom which has now died out. The houses are similar in appearance to those of the Bantu tribes around them, as is the arrangement about the two fireplaces. Young unmarried girls usually 513 sleep together in one large hut under the care of an old woman. The 482 young men and boys of the village also sleep by themselves, generally

14: Johnston G-4, 5 (no date) 1904 FL11 Luo FL11

near the entrance to the village, so that they can watch over any attempt to steal cattle. The hut which is directly opposite the gate of the village is usually that of the principal wife of the village head-man. There is much the same superstition as among the Bantu Kavirondo about shutting the door of a house behind a person who has just left it.

Unmarried men go naked. Married men who have children wear a

small piece of goat skin, which, though quite inadequate for purposes of decency, is, nevertheless, a very important thing in etiquette; for a married man with a child must on no account call on his mother-in-law without wearing this piece of goat skin. To call on her in a state of absolute nudity would be regarded as a serious insult, only to be atoned for by the payment of goats. Even if under the new dispensation a man [e.g. a step had once; among the Bantu equivalent to divorce (q.v.) is common between husband and wife. (see p. 787-not discovered). - Ruthyrl]

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

the herds and, by emulation of the age group next above them, slowly acquiring proficiency in the typical adult male pursuits, while the girls are drawn into the domestic tasks of the elementary family, food preparation and cooking, fetching water, and minding babies.

The young boys of a play group sleep together in the guest hut of a homestead when they no longer share their mother's hut at night. The girls sleep together in the hut of some widow of the group who is past childbearing age. This is the most important institution for the transmission of female culture. Girls only leave it at marriage, and till that time they are continuously trained in the adult roles expected of them. Boys at puberty build themselves bachelor huts (Dholuo *simbe*) in which they sleep and where they also entertain their girl friends. A group of young men makes a formal assignation with a group of mobile girls from a segment of another maximal lineage into which marriage is possible, and visits and entertainments are held to and from the one lineage territory to the other. The two groups pair off with one another into sex partnerships which last till the groups break up and reform. A youth graduates out of this company of *simbe* age-mates at marriage.

Authority over children rests jointly with the parents. That of the mother is likely to be the most effective in the early years, and she always holds a strong sanction in her manipulation and control of the food-supply. The father is ultimately responsible for the order of the family, and his discipline is stronger than the mother's as the children grow older. There is a relation of friendly intimacy between alternate generations. Children are on easy terms with their grandparents and will certainly use the latters' households as an escape from home discipline or as a more generous source of food if need or opportunity arises. Children are at no period encouraged to live away from home with other relatives, but parents allow them to circulate freely among a number of homesteads wherever they find the best welcome and the most plentiful food, among families which are usually both neighbours and close agnatic relatives. Brother and sister have no material reasons for conflict and there is a strong and lasting bond of affection and reliance between them, institutionalized in the symbolism of a number of ritual occasions, and linked to close important later relation to one another's children as mother's brother (*nen*) and father's sister (*awe*). Apart from parents, these are the only two consanguine relatives of the first ascending generation who are picked out by special kinship terms. The newly married woman is under the authority of her mother-in-law, and a man's relation to his wife's parents is marked by deep respect and avoidances. Ritual practices as well as personal attitudes emphasize the importance of fertility and virility,[1] and the value attached by a man to a numerous offspring and the ability of his wives to provide it. The Luo are aware of the male and female parts in procreation, but say that 'the woman's blood goes for nothing'. This seems a necessary inference from the nature of lineage organization rather than vice versa, for they would not argue that there is any tendency for children to resemble the father rather than the mother, nor do they permit marriage with close consanguine kin though of an unrelated lineage. It is

[1] e.g. the special rites which have to be carried out for a mobile girl dying unmarried, a wife dying without children, a widow dying before remarriage, a man dying when one of his wives is still childless, or a man dying before he has experienced normal intercourse, the latter being treated similarly to a female woman.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

the mother. Thus the adolescent girl enjoys the freedom of being able to do most of her domestic work independently. Unless strict discipline is exercised she spends much of her time meeting her male friends. The thought of marriage begins to assume a reality and to become an influential factor in her attitude and movements. The self-love which made its first conspicuous appearance during the preceding age now takes the form of an effort to make herself look more attractive. Holes may be made in the ears from which to suspend ear-rings, and all sorts of armlets or bands are worn round the wrists. Clothes or head-dresses of bright colours are specially chosen. Although the practice is fast dying out, girls of this age used also to be addicted to tattooing their backs. Better clothing is among the most pressing needs of adolescent girls, and their families must either make sacrifices or else persuade the girl to make do with what is available.

The attitude of the parents. The attitude of parents towards an adolescent girl is greatly concerned with her economic value and her ability to do domestic work efficiently. An added consideration is the girl's conduct, both in and outside the family circle.

Hence, a girl's ability to work well in the house gives her mother a satisfaction which finds an outlet in conversation with other women. The mother strives to put forward the merits of her daughter as well as her social conduct in the community, while the young girl becomes almost mistress of the house, her mother hardly touching the work—especially when there is more than one adolescent daughter. The shock experienced when the girl is married is a matter which some of the envious neighbours do not refrain from mentioning.

On the other hand, a daughter who is inefficient in domestic work is no credit to her mother's reputation.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

882 There is therefore frequent friction between some
593 mothers and daughters.

The father, while maintaining an interest of his own, does not exhibit his liking for his daughter so openly. The economic value of a girl to society is gauged by the extent to which a man may be excused his debts on the ground that after his daughter's marriage he will be able to pay them.

Allowances given to girls are not very generous despite the fact that daughters have a higher economic value than sons. There is a feeling that not much money should be lavished on someone who will not remain in the family to help the father in his old age. The main desire is to see the girl married, and it is a source of worry if she does not associate with men. The girl is also expected to be sociable towards neighbouring women, because if she is unpopular with them they might speak against her in the presence of her suitor or his relatives.

At this time disciplinary control by the parents slackens, since in order to contact men the girl requires a certain amount of freedom. Disciplinary measures may be exercised only in the event of misconduct, such as running away with a young man without notice to parents or having relations which are morally prejudicial to the community life. The mother, however, loses her dominating influence during the school age and the task of disciplining the older girl becomes the duty of the father or her older brothers.

The Sexual Life and Attitude of Adolescents

836 The sexual life of the adolescent is conditioned by the
883 prevailing social conventions on the nature of sexual relationship between males and females. Thus, though it may appear on the surface that Luo society makes no allowance for unrestricted sexual contact, in fact a

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

raised against such raiders. It is considered a disgrace to be discovered as an accomplice in raids on the girls' sleeping quarters.

On attaining Maturity

The attainment of maturity among girls is marked by the first onset of menstruation. In the past this was kept very secret until several periods had been experienced, and even now its first occurrence is kept secret. Formerly, early preparations were made for it by instructing the girls about the physical changes involved.

The information regarding this important physiological happening used to be given by the old woman in whose hut the girls slept. At present the information is obtained largely from experienced women with whom the girls associate. In the past there was no initiation ceremony to celebrate the event, and today the position remains the same. Although the betrothal of a girl could take place as early as ten, the social attitude was and still is that girls should not be handed over to their husbands before attaining maturity. Even when the mutual handing over took place before this age, the girl was obliged to live in the home of some older woman until the advent of menstruation. It is still believed that premature marriage results in great weakness to the girl.

The social position of a girl on reaching maturity. The social position of the newly-mature girl is vague and uncertain. Any abnormality of mind, character or body, is a source of anxiety to her family. Moreover, as most girls marry between sixteen and eighteen, there is a tendency for ill-wishers to over-state the ages of girls above that limit, because the attitude of society towards them is similar to that adopted towards overdue goods. Those who fail to marry at an early age thus become subjects of scorn. So strong is the pressure exerted by

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

this attitude that unmarried girls, as they grow older, are often forced to marry in the end by taking advantage of the institution of polygamy, which acts as a final method of absorption. Although she may live to an advanced age, a single girl is continually tormented by the fact that society does not approve of unmarried girls.

Restrictions. Traditionally, a mature girl is not allowed to enter her father's or her mother's sleeping place, especially if the mother is still giving birth to children. This restriction, although generally ignored by Christians, applies also to the wives of her uncles. Those who are her parents or parents by marriage do not go where a girl receives her male visitors. By custom this hut was built beyond view of the parents' huts and served as a sleeping place for boys. It is considered that a girl who has commenced associating with men should not enter her mother's or father's hut because she would interfere with their powers of reproduction.

Relationship with brothers. The fear of incest has led to the practice of keeping young women's activities as separate as possible from those of their brothers, but free association and conversation concerning their mutual interests generally takes place, since brothers and sisters retain an interest in each others' love affairs. From his sisters, a young man may be informed of things he wishes to know about his girl friend.

Pre-marital pregnancy. Cases of pre-marital pregnancy were very rare in the past, according to most of my informants. But this rarity was not due to the fact that sexual relationships were prohibited. Pregnancy among mature girls was apparently not infrequent from any strict moral code, but from the conscious effort of the girls themselves to guard against it. Because much importance was attached to virginity, it was a matter of personal pride and was carefully guarded. It was a great honour and a

4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

Their huts are very similar to those of the Bantu Kavirondo, but they are a trifle lower, and are generally built solely of reeds (*mabua*). The huts are dug out inside to a depth of 18 inches or 2 feet; the hut is plastered with the earth dug out from the interior. 342

There are two fire-places in each hut, and the customs previously enumerated about stopping at the first or second cooking place are the same as among the Bantu Kavirondo. 354

Young girls sleep in a hut with the other girls of the village in the care of an old woman. The boys of the village sleep in a hut by themselves. The villages are roughly circular. The huts are not arranged in any particular order, but the huts of one man are generally side by side. The huts of the young men are usually near the gates, and they are supposed to watch the gates in case of any attempt being made to steal the cattle. 513 361 883

On entering a village the hut directly opposite the gate is generally the hut of the principal wife of the headman of the village, or the headman of that part of the village. 361

Food products.—Mtama, sweet potatoes, a little *wimbi*, Indian corn, and also pumpkins, semsem, and pulse (*pojo*). Bananas are occasionally grown, but they do not flourish, as the country is a little too dry for them. A little tobacco and Indian hemp are grown. The Indian corn is not ground but generally eaten in an unripe state. 241

Ironwork.—They do not smelt iron, neither do they forge their hoes, which are all imported from Samia. They however forge spears, knives, bill hooks, axes, etc., from Samia iron. Among the Gemi tribe only people belonging to a clan called Uvino forge iron; the smiths are called Yothet-th. A rough kind of salt is made from the ashes of reeds and grass, and salt is also imported from Kisingiri. 325 439 258

Death customs.—When a person dies the body is immediately taken out of the house. Upon the death of a woman the brothers-in-law of the deceased dig the grave in the verandah of the house of the deceased; the corpse is buried on its left side with the hand under the head; the body is doubled up. A man, on the contrary, is buried on his right side with the hand under the head. In the case of a woman her relations and friends come and wail; her husband presents each clan that attends with a goat, the mourners stay three days. 764

The hut in which a person has died is used for a month; the neighbours then meet and drink *tembe*, and the house is broken down. Upon the death of a man his brother digs his grave; if the first wife he married is still alive he is buried in her house; if she is dead the man is buried in the verandah of the hut in which he died. [768]

Men only wail for one day, after that only women wail; the women wail for the whole of the first three days; after that the women of the village wail at dawn for fifteen days. 765

Signs of mourning.—Women wear a string of banana fibre round the forehead, they also wear a tail of white strings for about a month; the tail usually

10: Roscoe M-5 (ca. 1900)1915
FL11 Luo FL11

582
There are no restrictions as to the number of women a man [595]
may marry nor as to the number of his wife's sisters whom
he may take to wife. Previous to her marriage a young 836
woman may have as many lovers as she wishes, she is only 883
careful to avoid incestuous connections. The unmarried
women have their own quarters in a village and the young
men theirs, and they seldom have any further intercourse
than that of brothers and sisters; the young men, however,
from another village pay visits to the young women during
the day and make love to them, and in the evening the
women return the men's visit and have sexual relations with
them, while other young people sing songs of an obscene
character and dance outside the house. Such intercourse is
not stopped nor discountenanced by the elder people, as it is
a recognised custom. Should any children be born from such [848]
relations, no punishment ensues nor are the couple blamed.
When a father considers his son old enough to marry, he chooses 584
a woman to be his wife. He then takes a cow and a goat to
the parents of the young woman and arranges with them the
amount to be paid for the marriage-fee. If the parents
consent to the match, when an instalment of the fee has been 585
paid, the bride is conducted by her friends to the home of the
young man and lives with him as his wife for ten days: during
this time there is daily singing and dancing outside the house
where the bride and bridegroom reside, and they take part
in the dances. At the end of ten days the bridegroom's parents
give a feast to all those who have gathered, and after the feast
the friends of the bride escort her back to her parents, who in
turn give a feast to the people that accompany their daughter.
The bride remains with her parents until her husband is able to
obtain and pay the full sum asked for as the marriage-fee.
During this time, while the bride is waiting for her husband [837]
to bring the marriage-fee, there is no obligation upon her to
live a chaste life, and she is free to have as many lovers as
before. When, however, the fee has been paid and the bride
claimed, she ceases to live a loose life and becomes most chaste.
The husband builds his house, either in or near his father's 591
village, and his wife is brought thither. When a man marries

IV

ADOLESCENCE

857 593 In the interim period between childhood and adolescence there comes a time when a girl's ability to deal with domestic work is more advanced than her physical and mental development. It is during this period that the mother, still occupying a central position as adviser and supervisor of the girl's work, finds difficulty in the management of her daughter. Since the domestic work of her household is heavy, the mother uses all kinds of pressure to induce her daughter to do as much as she can.

856 [572] The girl's life at this time is characterized by her increased interest in boys and desire to come into contact with them. The friendships established during childhood with other young girls are weakened by the development of a new object of friendship in the opposite sex. During this time the breasts of most girls develop noticeably. The girls show great interest in this development and employ various means to stimulate it. An instance of this interest can sometimes be seen among those who stuff clothes in their bosoms to exaggerate the size.

On the whole, the period differs only in the fact that the girls definitely aspire to be grown-ups and are also more interested in friendship with boys.

Characteristics of Adolescence

813 This new period is the time when the mother leaves her daughter to bring her knowledge of domestic work to perfection by her own efforts. As compared with the school-going age, there is little or no interference from

20:Orninde I-5 (ca. 1948) 1952
FL11 Luo FL11

the mother. Thus the adolescent girl enjoys the freedom of being able to do most of her domestic work independently. Unless strict discipline is exercised she spends much of her time meeting her male friends. The thought of marriage begins to assume a reality and to become an influential factor in her attitude and movements. The self-love which made its first conspicuous appearance during the preceding age now takes the form of an effort to make herself look more attractive. Holes may be made in the ears from which to suspend ear-rings, and all sorts of armlets or bands are worn round the wrists. Clothes or head-dresses of bright colours are specially chosen. Although the practice is fast dying out, girls of this age used also to be addicted to tattooing their backs. Better clothing is among the most pressing needs of adolescent girls, and their families must either make sacrifices or else persuade the girl to make do with what is available.

The attitude of the parents. The attitude of parents towards an adolescent girl is greatly concerned with her economic value and her ability to do domestic work efficiently. An added consideration is the girl's conduct, both in and outside the family circle.

Hence, a girl's ability to work well in the house gives her mother a satisfaction which finds an outlet in conversation with other women. The mother strives to put forward the merits of her daughter as well as her social conduct in the community, while the young girl becomes almost mistress of the house, her mother hardly touching the work—especially when there is more than one adolescent daughter. The shock experienced when the girl is married is a matter which some of the envious neighbours do not refrain from mentioning.

On the other hand, a daughter who is inefficient in domestic work is no credit to her mother's reputation.

20:Omnibe I-5 (ca. 1948) 1952
FL11 Luo FL11

882 There is therefore frequent friction between some
593 mothers and daughters.

The father, while maintaining an interest of his own, does not exhibit his liking for his daughter so openly. The economic value of a girl to society is gauged by the extent to which a man may be excused his debts on the ground that after his daughter's marriage he will be able to pay them.

Allowances given to girls are not very generous despite the fact that daughters have a higher economic value than sons. There is a feeling that not much money should be lavished on someone who will not remain in the family to help the father in his old age. The main desire is to see the girl married, and it is a source of worry if she does not associate with men. The girl is also expected to be sociable towards neighbouring women, because if she is unpopular with them they might speak against her in the presence of her suitor or his relatives.

At this time disciplinary control by the parents slackens, since in order to contact men the girl requires a certain amount of freedom. Disciplinary measures may be exercised only in the event of misconduct, such as running away with a young man without notice to parents or having relations which are morally prejudicial to the community life. The mother, however, loses her dominating influence during the school age and the task of disciplining the older girl becomes the duty of the father or her older brothers.

The Sexual Life and Attitude of Adolescents

836 The sexual life of the adolescent is conditioned by the
883 prevailing social conventions on the nature of sexual relationship between males and females. Thus, though it may appear on the surface that Luo society makes no allowance for unrestricted sexual contact, in fact a

20:Orminde I-5 (ca. 1948) 1952
FL11 Luo FL11

difficult burden is imposed on the girls, who have to endure considerable inhibition to avoid social censure. On the other hand, boys enjoy much greater freedom. It would appear that this relatively stronger censure of a girl's conduct derives its strength from the anatomical evidence a woman is required to show on her day of marriage to prove her chastity. In this way it appears to be the duty of society to make sure that girls live up to the moral standards which ensure them a successful marriage. Therefore, whilst considerable intermingling is accorded to both sexes, relationships resulting in pregnancies and prostitution are discouraged. And, as has been seen, the social stigma attached to such relationships and their results comes down most heavily on the woman.

In view of the difficulties involved, the girl therefore adopts a compromise. She uses her wit as a defensive means of enabling her to enjoy the companionship of men and at the same time to help her to avoid being overcome by their reasoning. In this way, an adolescent girl who is clever at conversation is admired and considered entertaining by those men with whom she comes into contact.

When there are meetings between young girls and men there is accordingly a great deal of artful conversation. Girls consider men to be full of tricks designed to trap them. Mothers also warn their growing daughters to be careful of their conduct when with the opposite sex, explaining particularly that men are not to be played with to an extent where the matter becomes serious.

When girls go about together in a group they reproach any of their number who give in to men easily. On these occasions group morality is far stronger than among those who are more individual in their attitudes.

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

883 On the whole, girls dislike those men whose chief object
864 is sexual satisfaction. Their caution is often the result of
881 talks on the nature of sexual relationship which girls hold in their communal sleeping places, and with older women.

When newly-married women return to their maternal homes, they freely discuss among themselves—especially during sleeping hours—their experiences with their husbands. This affords an opportunity for the unmarried adolescent girl to obtain first-hand information on the nature of relationships in married life.

883 *Opportunities for contact.* The normal first meeting between girls and those with whom they may have sexual relations, takes place by conscious or deliberate arrangements made by the parties concerned, at marriage ceremonies or in public places like market centres or towns. They first make each other's acquaintance somewhere between the girl's and the man's house, particularly when the two live in close proximity. These are distinguished from any other meetings in that they are arranged between the male friends and the older adolescent girls or those on the threshold of adolescence.

The meetings which take place during marriage ceremonies are observed with great interest by girls of the nursing age, who watch the older girls' behaviour towards their men friends with keen curiosity. In many instances introductions are managed through the
584 brothers of the girls. Introductions resulting in marriage
883 may also come about through a girl first acquainting herself with sisters who introduce their brother to her. Brothers of adolescent girls would, like all members of the family, disapprove of a prolonged friendship without any sign of betrothal and would do all they could to persuade the girl to look for another friend.

881 *Sex education of adolescent girls.* Girls in the old tradi-
883
178

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

tional society had a more deliberate or conscious sex education than they receive in modern times. Instruction on the nature of sexual relationship was formerly given by an old woman of the village, whose hut served as a communal sleeping place for the girls. This old woman was one who must have stopped giving birth to children. She was either a grandmother or an elder wife in a polygamous homestead. The communal sleeping places are still a feature of the girls' environment, but many of the modern huts have no experienced woman in them; hence the girls have lost their former source of instruction on both the marital and the following day-to-day relationships.

The change from the traditional type of sex education has forced girls approaching marriage to seek information elsewhere. At present they usually make enquiries of experienced married women living in their neighbourhood. Beyond a few cautious warnings, mothers are rarely known to take part in the sex education of their daughters while fathers are completely detached from this field of enquiry.

Sex activities in the communal sleeping places. Talks on sex are not the only activities engaged in by adolescent girls in their sleeping places. In some areas they also receive nocturnal visits from young men who have failed to find suitable opportunities to meet them during the day. This is not a widely spread practice, however, which may be due partly to the strict morality imposed by Christian moral conventions.

Sometimes the girls themselves make arrangements to welcome these visitors by night, remaining awake in order to open the door for the men with whom they have made the appointment. Sometimes this form of visit is also carried out by young men without the girls' consent, but if they are discovered, a great outcry is

20:Orninde I-5 (ca. 1948) 1952
FL11 Luo FL11

raised against such raiders. It is considered a disgrace to be discovered as an accomplice in raids on the girls' sleeping quarters.

On attaining Maturity

The attainment of maturity among girls is marked by the first onset of menstruation. In the past this was kept very secret until several periods had been experienced, and even now its first occurrence is kept secret. Formerly, early preparations were made for it by instructing the girls about the physical changes involved.

The information regarding this important physiological happening used to be given by the old woman in whose hut the girls slept. At present the information is obtained largely from experienced women with whom the girls associate. In the past there was no initiation ceremony to celebrate the event, and today the position remains the same. Although the betrothal of a girl could take place as early as ten, the social attitude was and still is that girls should not be handed over to their husbands before attaining maturity. Even when the mutual handing over took place before this age, the girl was obliged to live in the home of some older woman until the advent of menstruation. It is still believed that premature marriage results in great weakness to the girl.

The social position of a girl on reaching maturity. The social position of the newly-mature girl is vague and uncertain. Any abnormality of mind, character or body, is a source of anxiety to her family. Moreover, as most girls marry between sixteen and eighteen, there is a tendency for ill-wishers to over-state the ages of girls above that limit, because the attitude of society towards them is similar to that adopted towards overdue goods. Those who fail to marry at an early age thus become subjects of scorn. So strong is the pressure exerted by

20:Ominde I-5 (ca. 1948) 1952
FL11 Luo FL11

source of much social rejoicing to discover that a married woman had been found to be a virgin. Such a bride was given a high prestige among the other women.

In the past, if a woman gave birth to an illegitimate child, her only chance of marriage was to an old man with a number of wives. There was no possibility of occupying the position of chief wife of the family; and the heads of cattle paid were much fewer. The child was taken by the man who legally married her, but she was not allowed to give birth in her own home. Everything was done to get rid of her as soon as possible.

Examples of such pregnancies are very common at present. But although social disapproval is still keenly felt, modern conditions have become more favourable to women in this situation, and an increasing number of them are being married to bachelors. Unlike some communities, no death punishment was ever given. If the occurrence takes place between close relatives the matter is kept secret; in the past, however, the couple could be exiled.

Modern Education and Adolescent Girls

Progress in the education of adolescent girls is hampered because the Luo people do not appreciate its suitability to the environment of their women. To the majority, modern education is associated with clerical work and the many other jobs that *men* take up after a school career. The position of girls in this scheme is not clearly envisaged.

The social importance attached to marriage is having to adapt itself to a prolonged school career and the raised age for marriage which this implies. An inability to appreciate schooling for girls is also based on a high esteem for the traditional education which it tends to interrupt and weaken.

19:Wilson E-S (ca. 1950) 1960
FL11 Luo FL11

this number, 90 were male suicides and 130 female. I have selected for the purpose of this chapter 10 male cases and 13 female cases as typical, and these were investigated in more detail to provide examples. Considerable time was spent among the villagers in each case, and full discussions were held with the elders in an attempt to determine the motive and the events which led up to the suicide. For obvious reasons, I shall not use correct names when describing these cases.

MALE SUICIDES

Male suicides in Luo usually follow loss of status. Seven of the ten cases can be so classified. The first five are of the type which involved intense emotional feelings of shame, loss of honor and status within the framework of the indigenous culture. Following these are two case histories of suicides which involved loss of status in the acquired or modern sense. Two cases will be described which involved the loss of status through poverty and the loss of traditional respect of sons, and finally one case which resulted from social ostracism.

The first suicide concerned a man whose younger brother married before he did. In Joluo society, men of the extended family marry in strict order of status, that is, the senior son of the senior wife must marry first. It may happen that he is younger in chronological age than, perhaps, a son of a more junior wife, but even in this circumstance, the younger son in years, who is senior in status, is technically married before his brother—that is, the payment of the first animals for a young girl allow the senior son to marry.

Suicide Case No. 1.

A young man who was the senior son of a senior wife was chronologically the oldest of all the sons in the village. His father and mother were both dead and, although he would eventually become head of the homestead, until he married he

115 184 to write down the authorised version of whatever ceremony it was that I wished to describe. Moreover they warned me not only that customs differed slightly from clan to clan and location to location in North and Central Kavirondo, but that the Luo who had crossed the Gulf and gone to live in South Kavirondo differed in a good many ways from the Luo who had remained on the north side of the water. It must therefore be understood that the customs which I am about to describe are those of a group of Luo clans living in a small area in Central Kavirondo, and that there may be discrepancies between my account of these customs and those of other observers in other parts of the tribal area.

II. The Marriage Customs.

582 721 In the old days, before the Europeans took over the government of the Luo country, it seems that a man did not normally marry until he was nearer forty than thirty, and girls did not marry until they were nineteen or twenty. In the case of a man this delay was apparently connected with his duties as a warrior. It was considered that a man fought better if he were free from the ties of married life. Though the Luo were never a fighting tribe in the grand manner like the Masai they had for some hundreds of years been pressing southwards through the surrounding Bantu tribes. Raiding for fresh land or even for cattle alone, and the consequent reprisals on the part of the raided, played an important part in tribal life, and every able-bodied man from the age of seventeen or eighteen up to the time of his marriage had to hold himself in constant readiness for a scrap. The term for a man of fighting age was *ucwer*, that for a married man *jait*, while that for a man who delayed to marry until much later than usual was *mosomba*. After marriage a man seems to have been exempt from all warlike duties and allowed to settle down and devote himself entirely to his family life.

581 885

582 583 It is likely that this postponement of marriage to a comparatively late age was, apart from its connection with the defence of the tribe, an instance of the reluctance of the elder men to surrender even a part of their wealth and power to their sons. A man could not marry without his father's permission, for it was only from his father (except under special circumstances into which I need not enter here) that he could obtain the cattle with which to acquire a bride, and primitive fathers are often no more anxious than some civilised ones to part with large quantities of their worldly goods for the benefit of their children. There was, however, no hard and fast convention as to the age at which a man might marry. Circumstances altered cases. A mother, for instance, who was without an unmarried daughter, and who wanted another woman to help her in the household work and cultivation, might insist that her son should bring a wife into the family, even if he had not yet reached ordinary marriageable age. Again if there

20:Orninde I-5 (ca. 1948) 1952
FL11 Luo FL11

schooling of wives, but modern young women sometimes rebel against this ordered régime, choosing rather to do as they please in their new homes.

Since the introduction of the plough, the part played by men in the cultivation of the fields has greatly increased. Clearing and ploughing are now done by men, but planting and harvesting are still carried on largely by women.

Women's organizations. In the past, women's activities were limited in number. Apart from the communal dancing parties in which they took a great pride, there existed among certain related families councils to settle disputes and misconduct among women. This communal organization has tended to become weaker with the growing family individuality introduced by modern conditions.

While Christian influence has increased their freedom by releasing women from tribal prejudice and by widening the horizon of men's views, pagan women are still hampered from taking an active part in modern economic and social activities.

Women's organisations range from small religious groups to registered co-operative societies. The management of the co-operative societies is largely in the hands of Christian women. They are thus more progressive than their pagan neighbours, although the gap is rapidly narrowing owing to the influence exercised by Christian women upon the other women in the community.

The changing economy. Before the introduction of a money economy, the garden formed the basis of the economic life of women. Their transactions depended on garden produce which they bartered in exchange for live animals. The more industrious and economical thus acquired considerable wealth, supplementing garden

[Text continues on p.55]

241 791 " Jabilo " or leading medicine-man of the community concerned performed a sacrifice or " misango " the purpose of which was to render ineffectual any harmful magic left behind in the soil by those from whom it had been taken. It occasionally happens even to-day that a cultivator will suspect that an enemy has buried " yath " or harmful medicine in a field. In this case no preparation of the soil of this field for a crop is begun until a diviner has been consulted in order to find out the enemy. The Luo have a great faith in the power of the diviner to discover an enemy. That the diviner denounces people, and that he is oft times right, cannot be denied. Sometimes it may be guess work, as when there has been a notorious quarrel and it is simple to suspect the other party in the quarrel, but at times the medicine man has more certain sources of information. In the year 1910 I had the good fortune to get into rather friendly relationships with a medicine man who had become a Christian. In one of our conversations, I asked him how it was possible to divine a wrongdoer. He told me that it was generally very easy. If a man wished to put down medicine, he had to procure it from a medicine man. Or, if he proposed to rob his neighbour he applied to the medicine man for protective medicine. Following upon the injury or the robbery, the injured party applied to the local medicine man in order to find out the enemy. If the injured person was prepared to pay a fee exceeding that paid by the enemy, the medicine man had no scruples about giving his client away. But I do not say that this is a complete explanation of all the powers of divination exercised by medicine men. Still, there can be no doubt that often both parties consult the same diviner, just as at times in our own social life both parties to a lawsuit will approach the same lawyer. Perhaps I had better safeguard myself. I am not, please, to be understood as implying that a lawyer will give his client away.

241 In the preparation of the soil for the crop, all members of the family who are fit, take their share. Only in bush country, where there is heavy clearing to be done, is the work left to the men. This operation is called " beto." In all other types of land there is no discrimination between the sexes, even where tall grass, called " olonge," has to be dug up. But there is a certain amount of discrimination amongst the age groups. When a man has advanced in 241 ● 887 years, and younger members of his family are sufficient for food production, he leaves it to them, while he devotes himself to less arduous tasks, possibly herding, or some form of social service such as the elders perform in settling the lawsuits of the clan.

241 The next operation after "beto " is " puro," the turning over of the soil. Where weeds or grass have been heavy, this is followed by " wang'o " or burning. In sandy, stony or red soil, sowing the seed

4: Hobley G-5 (ca. 1900) 1902 FL11 Lua FL11

poisoned arrows have fallen into disuse; there was a medicine man in Gomi country named Opundo who used to make and vend the poison. The Kisoma people also had an arrow poison maker. The poison is said to be composed of snake poison and certain herbs. Nearly all of these people wear sandals of a single thickness of skin when travelling.

Musical instruments.—Their harps have eight strings and are the same as those of Northern Kavirondo (Figs. 8, 10); the drum is covered with cow hide; they are called *Thóm*. Their drums are also similar to those of Northern Kavirondo and are called *Bil* (Fig. 9). The women also make hand harps of mimosa stalks called *Odendo*.

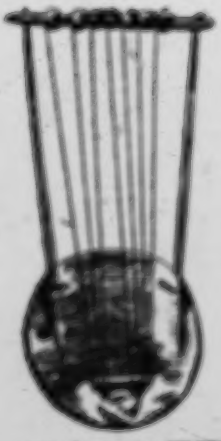

FIG. 8.—HARP: YIMUMU KAVIRONDO.

FIG. 9.—PLAYER OF LIRU TYPE, JO-LUO GROUP. PROTOTYPICAL BANDA.

FIG. 10.—HAND HARP FROM KAVIRONDO.

Tobacco and bhang.—These people smoke and chew tobacco; only a few take snuff. Both sexes smoke and chew tobacco. *Bhang* or Indian hemp is smoked separately in a water pipe. Only men smoke bhang. Young fighting men are not allowed to smoke it.

Pombe or pombe.—This is made from mimosa or wimbi either singly or mixed. Both sexes drink; young women do not drink with the men, the old women however do so.

SOME PRELIMINARY NOTES ON LUO MARRIAGE CUSTOMS.

By K. C. Shaw.

I. Introductory.

B5 S85

This account of Luo marriage customs was given to me by half a dozen elders of the Luo tribe, living in a location called Nyahera about seven miles from Kisumu. All of them were over fifty, and two at least must have been nearing seventy, if they were not older. The question of the age of my informants may seem irrelevant, but in fact it is not. In the first place their advanced age, as age is counted among primitive people, entailed that they had been brought up, and had passed their early manhood during a period when the customs of the tribe had still not been affected by contact with European civilisation. Their view of life, and of their duties as members of the Luo tribe was the view that had been taken by their fathers and their grandfathers before them. In this they differed from their own sons and grandsons whose attitude towards tribal customs has been and continues to be profoundly modified by white influences. This falling away from the traditional ways on the part of the younger generation is not only a source of grief to the old men: it is also a source of profound annoyance. For it robs them of a large part of the prestige and authority which among the Luo, as among other primitive people, is traditionally the due of those who attain to a ripe age. In the old days this prestige and this authority carried great weight. It was the head and fount of power in the tribe, and the exercise and enjoyment of this power became the chief interest of a man's life as his years increased and his sons grew up and took from his shoulders the family duties and cares of his earlier days. It follows that the decay in the importance of the old men, which is such a marked feature in nearly all the Kenya tribes to-day, makes the elders not only resentful, but also very willing to dwell on the old days, the good days, when their word was law, and the young were still in due subjection to the old and the wise. For these two reasons then, their exact personal knowledge of the traditional mode of life of the tribe, and their interest in the days when this mode of life was still the accepted one, the advanced age of my informants was a valuable factor. Also it pleased and flattered them to be appealed to as authorities, and from the beginning to the end of our intercourse they were only too pleased to tell me all they could of the days when they were young. Apart from a natural inclination to view the past through rosy spectacles they took great pains to give me an accurate account of what the tribal customs used to be before the white man came. Long discussions used to go on over points of detail, and it was only when they were all agreed that I was allowed

B5 194

543 ous parents to make his contribution to the family hut tax. The most unruly elements, again speaking generally, are these lads when they return to the Reserves, though some of them come back much benefitted in every way so far as one can tell.

PROVISION FOR THE AGED:

888 178 There is nothing in the social life of the Luo in the way of organized old age relief. The aged look to the younger members of the family to support them. In days gone by when there was no Hut and Poll Tax, and when all the clothing needed was a goatskin, all that the younger members had to provide was food and shelter, with an occasional fee to the medicine man, in the case of illness. Even funerals, when the aged died, were simpler than now. If the parents outlived their offspring there was always the wider circle of the sub-clan or clan to appeal to. And outside the clan were the relations-in-law, upon whom many more claims are made than is customary with us.

But, now, the whole problem of the support of the aged is vastly more difficult, and this in spite of the fact that health measures are beginning to increase the chances of the younger elements surviving to adult life. As against this can be offset the fact that many of the [166] younger members of a family leave the Reserves and remain away for years, and indeed some never are heard of again. Also, there is more than a tendency for the younger generation to go its own way, and commit itself to a more civilized mode of life. There is a definite cleavage between the lives of the younger and the older generations. This is accompanied by weakening ties of common interest and filial duty.

888 178 651 Under our regime, and particularly under our system of hut tax, we have driven a wedge into the solidarity of family life which has given a grievous blow to the foundations upon which community life rests. The old are felt to be a burden as never before in the history of the Luo. It is inevitable that more and more burdens should be placed upon the younger elements in tribal life, but we have added to them with, in many cases, a certain element of ruthlessness which is very keenly felt and resented. I quote one instance of what I mean. An old couple in the Reserves with two sons, one a ne'er-do-well a worthless fellow, a jailbird. The other son just rising Poll Tax age. The old couple lived in a rather tumble-down hut, and were known as having no resources, no cattle, sheep or goats. A few fowls formed their "wealth." The old father, while by no means decrepit, was long since past the stage when he could cultivate extensively or go out wage-earning. The old mother had indifferent health, and at times could hardly drag herself back from the well with the pot of

888
178
651

water. The young son could not find employment and was wandering about trying to scrape together the money for his poll tax. Upon the father came the demand for hut tax. He had no money and could not pay. Next year another demand was made, this time for the current year and for that of the previous year. Again he could not pay. The third year he was dunned for three hut taxes, and as he was unable to pay his hut was confiscated to Government, the door was sealed up, and his aged wife driven to seek shelter among neighbours. Homeless, the old man made a frantic effort amongst his relations, who were already liable to pay their own dues, and by dint of much supplication managed to get enough to satisfy the tax for the first of the three years, whereupon his hut was unsealed. Is it any wonder that the younger generation regard the aged as a liability as never before? Demands for hut tax upon the penurious aged is one of the greatest solvents of filial affection in the Reserves to-day, for the burden falls largely on the young.

a criminal offense. He was caught, and the Court fined him a relatively large sum of money and gave him thirty days in which to pay. He became very depressed and, after unsuccessful attempts to raise the money, he hanged himself.

Suicide Case No. 6.

159
762
685

The man involved was in his early thirties, and was in a position of trust with a Local Government body in Nyanza Province. He was alleged to have abused his position of trust by embezzling a considerable sum of money. The auditors had come across this defalcation in the books and brought it to his attention, but before he was arrested he killed himself by falling on a knife. Both the cause and the method can be said to be modern.

159
762

Case numbers seven and eight involve a loss of status, but on the other hand are attributable to poverty.

Suicide Case No. 7.

[888]
[626]

An old man whose wives had all died had to depend on his sons for support. The sons supported the old man while in his village but, after a quarrel, built a new village of their own and refused to build a house for him. As he had no one to support him and as he felt that he was ostracized by his sons, he had, to quote the Luo elders, "No other recourse than to commit suicide. His sons killed him and will suffer." He hanged himself on a thick tree which grew by a river, where he was found by an ex-chief. The Luo elders were quick to point out that he achieved his revenge, because the descendants of his sons were already few in number and mostly girls. "The line will die out because they killed him."

Suicide Case No. 8.

The man in this case was a widower living with his only son, who gave him food, but could not afford to maintain the ap-

Homicide and Suicide among the Joluo of Kenya

village straight to the hut which houses the body and to fall prostrate on it, wailing and crying. However, on this occasion, the woman walked very slowly into the village as if in a daze and without crying and without wailing and without saying a word to anyone. She entered her house and locked the door. Those in the village immediately became suspicious and broke the door down but within those five minutes she was found dead from hanging. The villagers told me that she believed the curse of her father had killed the man she loved, so she went to join him.

159 762 [764]

Suicide Case No. 23.

An elderly woman, whose husband had died, depended on her children for sustenance. In her old age she contracted a disease similar to leprosy. Her son, as is customary on such occasions, destroyed her house in the compound and built one for her outside of the homestead. One morning they found that she had hanged herself because, they stated, of the pain and trouble she experienced through her illness and because she was so unhappy that she could not take her grandchildren to teach and love as was her role in life as a grandmother. Her illness barred her from all of the village activities, and she felt that she was no longer part of the family. Her ghost was not considered to be any more dangerous than that of a person who died a normal death because she was old and her suicide was from old age and weariness. She held no grudge against anyone.
